I just dug out my DX398 and hooked it to my
VHF diskcone and have tuned the 6.925
signal. You will have to push the "step"
button to change the tuning step.
I can get the signal tuned very clearly.

Terry

HO HO HAAAAA HAAAAA!!!

You just don't "get it," do you, son?
What the hell makes you think that your widdle baby kill-file
means beans to me, or anyone else?? I got news for you, sonny:
the universe does not revolve around *you*.
There are six BILLION people in the world, son-
who gives a shit about *you*??
I lived my whole life without speaking to you
and I can continue just fine if I never said another word
to you for the rest of eternity, kiddo...
And that goes double for the couple of dozen other
people who kill-file; the thousands of the rest of
us will get along just fine, thanks.
So have a nice life- you have my permission to
run away into your kill file and stay there with your toys.
The rest of us will stay out here in the real world.
D.S.

Well, I've got it tuned. I can recognize the music, but it's far from clear. A few minutes ago there was a man's voice speaking that was pretty clear, though. Probably the best results I've gotten from ssb. Generally speaking, should usb be less understandable than regular am?

The DX-380 does not have a BFO or SSB ability so you won't be able to
make this type of transmission understandable.

I suspect it will take some time to "master"
the art of SSB. On most receives SSB will
never be as clear as AM, but it should be
close enough so that you can listen to
and enjoy music.
Try hunting arround 14 MHz and listen
to the hams.
I am in, just south, of LExingtonKY, and the current
pirate, Underground Radio is giving a ~S8
On the DX398 I had no reading, but I was using my
scanner antenna. I plan on bringing my antennas
out to a patch panel so I can rapidly change from one
radio to another. I had such a panel, but I am rewiring
my radio desk, so it will have to wait awhile.
I am going to drop him an email and see what happens.
Terry

You're right. Seems my radio is working fine. I've moved my radio and hooked up the not-so-great amplified sw antenna I bought at RS about the same time as the radio. It sounds just fine now. Noisy, but very clear. Just got done listening to a little story about an acid flashback. I even sent them an email at the address they broadcast.

btw, I'm planning on building a "broomstick" antenna. I know it's not the best thing, but it's cheap, easy, and portable. I'm thinking it will bring broadcasts like this in much better. I can probably even use it with the amplified antenna.

He is not complaining about picking the signal up but making it
understandable. You can't do this with DX-398. No SSB mode or BFO means
no SSB detection.

ER, you might want to take a look at the DX398 again.
I have mine in front of me and it certainly does have
SSB mode, support for both LSB and USB.
I modified mine to defeat the tuning muting, but
even with that, I just barrowed my wife's stock
DX398 and I can tune it just fine. I prefer the lack
of mute,.
On the lower right front there is a button labled
am/mode. This toggles/steps the radio through
AM>LSB>USB>AM.
Again, please recheck your "facts".

1586. Re: Wellbrook ALA330S received today First impressions

Newsgroup: rec.radio.shortwave
Date: 2005-01-22 23:33:15 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1106436795.644501.106390@c13g2000cwb.googlegroups.com>
Source record: 5586

Hi John,

Living in the United States, I have the North American power supply for the Wellbrook ALA 330S which is perfectly adequate. Naturally I cannot comment on the English power supply, but I think that if Andy Ikins thinks it's adequate, it probably is. Why not give him a telephone call (or an e-mail) and ask him directly if you should stay with the supplied adapter or if he thinks you need something "better?" I suspect he will tell you that his power supply, though inexpensive, is all you need, but you should find out for yourself.

I can't comment on the quality of the mounting plate for outdoor use. I have my antenna mounted to a Radio Shack rotator which is affixed to a rafter in my attic. You might want to discuss that with him also.

I have to tell you that when I first opened my package, I too wasn't really impressed with what I saw, especially in view of the glowing reviews in PASSPORT and WRTH. It really didn't seem like much. (The Postal Service Lady who delivered it asked me if I had ordered an imported "Hula Hoop!")

It wasn't until the Wellbrook antenna was connected to my new AOR AR7030 Plus receiver that I realized what a great piece of equipment it is.

I don't know what Andy Ikins puts in his little boxes, and, frankly, I don't care. All I know is that it is the best antenna I have ever used. The summertime here is usually a "wasteland" of poor signal strength, interference, and atmospheric noise. No other antenna I have tried has worked satisfactorily. This past summer, with the Wellbrook, the listening was so good that it was easy to forget it was summer!

Some people, mostly non-owners, have questioned the price charged. Even you yourself, not having yet used it, have questioned the value.

Wait until you have the antenna operating. If you're like me, you'll know that you've in fact gotten a bargain! If the price were TWICE it would still be a bargain, at least at my location, in my opinion, where nothing else works!

Let us all know your impressions after you've used it for a day or so.

Best,

Joe

I still have my DX-398. It is my first portable SW radio. Portable
defined as you can easily hold it in one hand. Unfortunately it does not
have SSB mode or a BFO so you can pick up a SSB transmission but not
demodulate them properly.

It is a great sounding radio for AM transmissions, which is almost all
of the SW program broadcasters. Very few programs are in SSB.

This leave out most of the Hams broadcasting in SSB but some still
broadcast in AM.

Most of the military and utility stuff is SSB.

Sorry about my previous posts. I pulled the radio out and did not see a
BFO or SSB switch on it and I don't recall ever using it for SSB.

When I get some new AA batteries for it I'll have to try the hidden SSB
modes. Didn't think I'd learn a new thing about a radio I have owned and
not used for years.

TERRY,
.
The RadioShack DX-398 / Sangean ATS-909 is 'noted' for being the
exception to the rule; that most 'portable' AM/FM Shortwave Radios
have a tendancy to OverLoad with a very long (+100) Wire Antenna.
.
Conversely, some complain that the RadioShack DX-398 / Sangean
ATS-909 is some what deaf on it's Whip Antenna when compaired
to other 'portable' AM/FM Shortwave Radios.
.

Used select text in Acrobat Reader to copy text from a pdf file...

When you have located an SSB

station, press AM MODE to receive

the transmission. Repeatedly

press AM MODE to switch between

USB or LSB transmissions (try

LSB for frequencies below 10

MHz or USB for frequencies

above 10 MHz).

4. Set STEP to SLOW then readjust

MANUAL TUNING for maximum

intelligibility.

That's normal for the DX-398/ATS-909.

Plaaying around with the DX398 I have found
that a "strong" singal is much better then a weak
one. I just ran 100' of wire and laid it on the newly
fallen snow. Wtih no matching tranformer. (as an aside,
antennas work much better if errected in bad weather,
in fact the worst the weather the better the performance!).
By winding the wire in and out, I have it on a military spool,
I found that the DX398 is much happier with a strong signal.
I don't have access to equipment to measure the exact signal
required, and I don't think the ARRL lab comparison of the
DX398 with other portables adressed that issue.
And yes my wife is convinced that I am insane.
But she willingly helps me with thes odd experiments.
At some point I am going to have to errect an antenna "just for her".
I am just glad she hasn't grabed one of my R2000s!
(My original R2000 is showing it's age, I took it on one too
many picnics and I hope to restore it in the near future. The tuning
has gotten very touchy and I tend to use it for a dedicated WWV
receiver at the moment.)

Try turning the RF Gain/ Attenuator down until it sounds like you want it.
Makes a lot of difference.

Is 6925 a common priate freq?
I mainly listen to utility and
international broadcasters, but
this is a ball.
So far there have been four different
pirates on this freq.
WMFQ
Iron Man Radio
Undercover Radio
WEAK Radio
Running a S9+10 at peaks!
My wife is loving WEAK radio.
She loves the format!

I confused the model numbers. The 398 does have SSB and the radio I own
the 380 does not.

When you've got a quarter of a million watts of medium wave transmitters
blinking their tower lights on your horizon, it's a problem. And I'm
5-7 miles away.

Especially with a Kenwood R-1000 which uses diode switched bandpass
filters in the front end. Since I got a portable to tote around,
I found that If I want to use another receiver in the house, I have
to turn on the R-1000 to bias the diodes on or off, (or disconnect the
antenna), otherwise the spectrum is filled with intermod reradiated from
the antenna.

[Diety] help any radio buff who lives in Federal Way/Vashon Island or near
any other large metro area's medium wave transmitter patch. I heard a
story about a MARS operator/ham there who was having problems with
an on frequency harmonic on a MARS channel around 4 MHz. The FCC guy he
talked to said (words to the effect), Yup, it's right on your frequency,
a couple of miles away, 100 milliwatts, and within the legal limits. Sorry.

Due to the nature (physics) of how SSB works it's difficult to make the audio sound like the original. One problem is the original pitch range is missing from an SSB signal and there's no way to know exactly what it was. For example, I have heard Art Bell, the AM radio talk show host, operating on the ham' bands in SSB. It sounds like Art but it's not the same as hearing him on an AM broadcast station. It does help if there is musical content to an SSB signal which can act as a reference for adjusting the pitch correctly. Since SSB is mostly used for voice only, it doesn't really matter if the pitch is not exactly like the original.

>That's strange. Why would they not have designed it with an RS-232
>interface?
Because RS-232 levels require voltages that are rarely seen on
transistorized equipment these days. Just about everything except
RS232 run on 3.3 or 5 volts. RS232 levels are + and - 10 volts or so,
and 20ma current loop is often about 100 volts!

Chips like the Max232 exist to deal with precisely this problem...

1609. AIR Republic Day

Newsgroup: rec.radio.shortwave
Date: 2005-01-24 11:09:39 UTC
From: dxAce <dxace@eclipsed.com>
Message-ID: <41F4D773.68D7CA22@eclipsed.com>
Source record: 5608

Dear Friends,

AIR will broadcast special programs in connection with
the Republic Day celebrations on 26 Jan 2005

25 Jan 2005 :

1400-1430 UTC : President's address to the nation
1630-1830 UTC : Kavi Samelan

26 Jan 2005

0350-0645 UTC : Running Commentry of Republic Day
parade

Hindi: Delhi 6155 9595 11620 15135

English : Delhi 6030 11830 15020; Aligarh 9910

These programs will be broadcast by all stations of
AIR.

Because of this, there will be some modifications to
AIR External Services in Urdu (ie Commentry in Hindi
will be broadcast instead of Urdu Service from 0350 on
6155 9595 11620)

With Republic Day Greetings,

Yours sincerely,

Jose Jacob
(Via dx_india)

"Honus" <> Neither of those guys are in the same league as Steve Allen and Johnny Carson were. Not in their dreams...or anyone else's.>

Jimmy Kimmel is just another butt-kisser. He might be a good Ed McMahon, but he is certainly not a Johnny Carson. Carson not only had a lot of talent, but he had a special kind of soul. He could deal with any kind of person with kindness and charm and be funny too.

Guys like Kimmel have to call their agent before they take a poop, and they need to get paid before they smile.

Well after a very nice extended summer vacation, I am pleased to be back and bringing you the finest in collectable radio equipment ever offered on e-Bay.

The "summer vacation" as described above was actually the period of time both radio-mart and gottahaveit1995 were listed by ebay as "non-registered users"....you know what that means.

I remember seeing gottahaveit1995 posting positive feedback for radio-mart about 2 years ago. When radio-mart returned this past fall as a registered seller, those feedback listings disappeared. Strange.

Hi, I'm looking to buy a portable receiver. I'll mainly listen to FM and MW, but want RDS. Both receivers do this. I want to listen on the train etc. Shortwave would be great too (have listened for years using other receivers), but I'm afraid the 909 would be too big. Any opinions on any of these receivers? Thanks

EXACTLY! And then there was Carson's personal STOOGE Ed McMahon, who's job it was to sit there and
laugh at anything and everything whether it was funny or not. He was basically a human "cue card"
letting the audience know when it was time to laugh. DUUUUUUUUUUUHHHHHHHHHHH

Yeah, truely a "great" show.

No. Scans of the ad are few and far between - the only one that turned
up when I did a Google image search was the one I posted the link for.

But here's a political web site that includes the photo of the car and
the text of the ad:

Hard to say but just guessing I'd say power line noise. It seems to affect
the lower bands more than the higher bands. But I'd have to hear it for
sure to know what it was.

The antenna should be pretty resilient once you have it mounted. As I
recall, Wellbrook does recommend that, after attaching the base of the
loop to a post, rotor, etc., you should add some improvised vertical
supports to support the upper portion of the loop in the event of high
winds. I doubt it would be hard to add this extra support.

The way I have the antenna situated is unusual, I think. I have it on
the end of a horizontal mast extending away from my building. The *top*
of the loop is actually attached to the mast via some clamps and
protective rubber inserts. The clamps hold the loop firmly, but not so
tightly that the antenna can't 'give' in the face of strong winds. The
base of the loop, with the coax attached, isn't mounted to anything,
but the coax itself provides it with a bit of weight and added
stability.

I obviously could have mounted the loop differently, and could certainly have attached it via its base to the horizontal mast I'm using, provided I also gave it some vertical support for wind protection. However, I thought that attaching the upper portion of the loop to the mast while leaving the bottom free to shift a bit with the wind would provide better long term protection, and after a few months I feel pretty good about this arrangement. Because the loop is visible out my kitchen window, I've monitored its condition very carefully and everything's working out just fine. In fact, over the last couple of days we've had very strong winds and these have not stressed the loop *at all*.

Countdown to global catastrophe
Climate change: report warns point of no return may be reached in 10 years, leading to droughts, agricultural failure and water shortages
By Michael McCarthy, Environment Editor
24 January 2005

The global warming danger threshold for the world is clearly marked for the first time in an international report to be published tomorrow - and the bad news is, the world has nearly reached it already.

The countdown to climate-change catastrophe is spelt out by a task force of senior politicians, business leaders and academics from around the world - and it is remarkably brief. In as little as 10 years, or even less, their report indicates, the point of no return with global warming may have been reached.

The report, Meeting The Climate Challenge, is aimed at policymakers in every country, from national leaders down. It has been timed to coincide with Tony Blair's promised efforts to advance climate change policy in 2005 as chairman of both the G8 group of rich countries and the European Union.

And it breaks new ground by putting a figure - for the first time in such a high-level document - on the danger point of global warming, that is, the temperature rise beyond which the world would be irretrievably committed to disastrous changes. These could include widespread agricultural failure, water shortages and major droughts, increased disease, sea-level rise and the death of forests - with the added possibility of abrupt catastrophic events such as "runaway" global warming, the melting of the Greenland ice sheet, or the switching-off of the Gulf Stream.

The report says this point will be two degrees centigrade above the average world temperature prevailing in 1750 before the industrial revolution, when human activities - mainly the production of waste gases such as carbon dioxide (CO2), which retain the sun's heat in the atmosphere - first started to affect the climate. But it points out that global average temperature has already risen by 0.8 degrees since then, with more rises already in the pipeline - so the world has little more than a single degree of temperature latitude before the crucial point is reached.

More ominously still, it assesses the concentration of carbon dioxide in the atmosphere after which the two-degree rise will become inevitable, and says it will be 400 parts per million by volume (ppm) of CO2.

The current level is 379ppm, and rising by more than 2ppm annually - so it is likely that the vital 400ppm threshold will be crossed in just 10 years' time, or even less (although the two-degree temperature rise might take longer to come into effect).

"There is an ecological timebomb ticking away," said Stephen Byers, the former transport secretary, who co-chaired the task force that produced the report with the US Republican senator Olympia Snowe. It was assembled by the Institute for Public Policy Research in the UK, the Centre for American Progress in the US, and The Australia Institute.The group's chief scientific adviser is Dr Rakendra Pachauri, chairman of the UN's Intergovernmental Panel on Climate Change.

The report urges all the G8 countries to agree to generate a quarter of their electricity from renewable sources by 2025, and to double their research spending on low-carbon energy technologies by 2010. It also calls on the G8 to form a climate group with leading developing nations such as India and China, which have big and growing CO2 emissions.

"What this underscores is that it's what we invest in now and in the next 20 years that will deliver a stable climate, not what we do in the middle of the century or later," said Tom Burke, a former government adviser on green issues who now advises business.

The report starkly spells out the likely consequences of exceeding the threshold. "Beyond the 2 degrees C level, the risks to human societies and ecosystems grow significantly," it says.

"It is likely, for example, that average-temperature increases larger than this will entail substantial agricultural losses, greatly increased numbers of people at risk of water shortages, and widespread adverse health impacts. [They] could also imperil a very high proportion of the world's coral reefs and cause irreversible damage to important terrestrial ecosystems, including the Amazon rainforest."

It goes on: "Above the 2 degrees level, the risks of abrupt, accelerated, or runaway climate change also increase. The possibilities include reaching climatic tipping points leading, for example, to the loss of the West Antarctic and Greenland ice sheets (which, between them, could raise sea level more than 10 metres over the space of a few centuries), the shutdown of the thermohaline ocean circulation (and, with it, the Gulf Stream), and the transformation of the planet's forests and soils from a net sink of carbon to a net source of carbon."

Global warming is tripe. 10 000 years ago the huge ice cap covering Northern
latitudes melted. What caused that?

No, it isn't tripe. Global warming (and cooling) really happens. What is in question is how much is due to natural feedback mechanisms, and how much is this accelerated (or decelerated) by human activities. The answer is so complex that one or more complete cycles will probably occur before we learn the answers.

Meanwhile, we need to ask ourselve show we (and earth) will survive and prosper in the event that significant climate change occurs (and it may well be as we speak) . That question is probably more critical and immediate.

Here in Central California, we get a Peruvian religious station on about 6020.25 regularly; last night (about 0500 Z on January 24) it was coming through better than usual.

R. Rebelde in Cuba on 5025 almost always outshines its bigger R. Havana brother on any frequency at this QTH. Funny.

Yes, it happened 10000 years ago - but it was bugger all to do with man,
that's the point. In Roman times, you could grow grapes outside in Northern
England - you can't now.

For me last night (0500 - 0630) in California, everything from 6.1 MHz up was about shot. Even RN Bonair on 6165 was weak. Below that, though, things were pretty good. R. Rebelde on 5025 was as good as I've *ever* heard it, and the 5020.25 Peruvian 5-kW station was clear. WWV on 5000 was pounding in 20 over solid. A Spanish-speaking station on 5005 (Eq. Guinea?) was not too bad either. Tropicals below 5 MHz were not so hot, for some reason.

Regardless of what anybody says,there is always going to be somebody who agrees or disagrees.There are folks who like Carol Burnett and Jay Leno and David Letterma and there are folks who do not.And I suppose that is ok according to whatever some folks opinion's are.I prefer General Motors vehicles,some folks prefer Ford or Daimler Chrysler vehicles,nothing wrong with that at all.

I can tell you the 1026 works well for many kinds of local noise and nulling local stations, not so good for distant statioons or atmospherics. If I had to do it again, I'd get the 1025, just because it is cheaper and the little antenna on top is no big deal (and a piece of wire for the noise antenna is easy enough to rig up). Also, if you need to modify it for better MW coverage, the 1025 is easier to mess with because it has discrete components.

Interesting comment about a man who rescued the Tonight Show and proved
the viability of the late night show format. Carson turned it into
"the" late night show that led the way for many others, but at the same
time was such a force that serious competition took 20 years to
develop. He was such a force that he could attract heads of state to
appear and the "blessing" of an appearance on his show made the career
of numerous entertainers. That his audience was huge and widespread
and loyal goes without saying. He was able to be funny without being
offensive and took pains to not upstage, but showcase his guests. And
he had the sense and grace to bow out completely while still a success.

Entertainers like Kimmel are one-trick-horses. Humor based on bodily
noises works for a while but doesn't have the staying power of someone
with true talent like Carson.

If you found him unhumorous that seems to put you in a distinctly small
minority.

I think Letterman is the only current host who has a chance of lasting
nearly as long. Assuminghis health doesn't take him down first. He and
Carson were quite close... I look forward to seeing what Dave has to say
on his show tonight.

6 of the negatives were from the same person.

for those that didn't know, the feedback rating is based on the number
of members, not the number of + and - so if a person gives 6 negs, it
only counts once, same for positives, only counts once

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Thanks! It's good to know what the sound effect is. Now I understand why
it was so wide, but just sounded very noisy on AM.
I'll check the DRM site to see where its coming from- sure was a strong
signal.
Brian

don't think its gonna happen: its been crossposted to too many
newsgroups already: I've found stuff I posted 10+ years ago still
showing up on Google - I think the info will outlive me.

1666. French Langauge SW BC on US West Coast?

Newsgroup: rec.radio.shortwave
Date: 2005-01-26 03:22:07 UTC
From: Leigh Marrin/KM6JE <leigh@coyote.rain.org>
Message-ID: <ct72cv$r46$1@news.rain.org>
Source record: 5666

A co-worker speaks French, and would to hear some SW BC in French, here on the West Coast of North America.

I've been tuning around recently from around 0100z to 1200z, and can't hear any French... lots of Spanish, some Asian, mid-Eastern, even Radio Australia in "Tok Pisin", the dialect of the Solomon Islands, but no French..

Thanks in advance for any tips. --Leigh Marrin/KM6JE in Santa Barbara, Calif.

> itself would go against Christian teaching. **********

In fact, the founders of America specifically did NOT make America a
Christian State, in order to avoid the persecution that resulted in the
one-religion states of Europe. Don't forget, many of the people living
in the US at that time had ancestors (not that long before) who had been
members of religions that had been relentlessly persecuted in England by
the Anglican Church. Puritans and their more radical religious cousins
the Separatists (who became the Pilgrims), Quakers, even Catholics. Add
to the desire to avoid the religious wars and persecution that had rent
Europe for a thousand years the fresh memories of the Salem Witch
Trials, and the founders had no desire at all for an official religion
in the US. Yes, they were all Christians and believed in Christian
principles, but they didn't want to OFFICIALLY favor one Christian
denomination over the other, because they knew it would cause trouble.
It seems that modern Americans have forgotten this, and want to make
Evangelical Christianity the official religion of the US and drive
everybody else out of the country. The founders would be horrified.

This is the opinion of most of the New Left Communists who have taken over the Democratic Party. When they say they want equality, they mean equality among themselves. Orwell had it pegged; some animals are more equal than others in the NLC worldview.

That is the dream of most Americans, which is why the collectivist communist "solutions" always fall flat on their face. Forget the fact that most people will be stuck making $8 an hour for their entire lives; they dream all the time of being RICH, that is why reality TV is so popular and why lotteries and casinos never want for customers. Take that dream away from them, and they have nothing. Woe be to the New Left Communist who tries to take away the average man's dream of being Donald Trump, for that dream is what keeps the average man going. When you succeed in taking away a people's hope for bettering their lives, you end up with Russia or North Korea where most people are consumed with just getting by from day to day. The whole economy and society stagnates, and never seems to get going again. Without that top 1%, the economy wouldn't do anything, and our store shelves would be empty and our consumer goods would be poorly made (exploding TVs, anyone?) if you could get them at all. When people have the dream of bettering their lives, even if they never get to be Trump, we're all better off.

1674. Re: SSB in DX-398

Newsgroup: rec.radio.shortwave
Date: 2005-01-26 04:16:41 UTC
From: et472@FreeNet.Carleton.CA
Message-ID: <ct75j9$80u$1@theodyn.ncf.ca>
Source record: 5674

"CW" (cmagers@earthlink.net) writes:
> Nothing weird about it. Just like any other radio signal, you have to tune
> the radio correctly.
>
But when people don't understand SSB, of course it's "weird".

Tune a regular AM signal, and the carrier ensures that it is always tuned
properly. The only thing the tuning does is move the signal into
the passband of the IF filter. Mistune it, and you get reduced amplitude,
and altered frequency response.

With an SSB signal, mistuning likewise moves the signal out of the passband.
But it also has to be tuned properly in relationship to the "reinserted
carrier", ie the BFO, and if that isn't right, then you will be translating
the modulation to the wrong place in the audio spectrum. Voice can be
ambiguous, since you often won't know how someone sounds (because you
don't know their voice), so mistuning can merely make someone sound squeaky,
or even sound right even if not exactly as the person sounds in real life.
Music is absolute tones, and if you don't tuen that right, not only will
you not hear the proper notes, but the relationship of the notes to each
other is off. You know what a given note sounds like, and not much mistuning
messes things up.

Well I didn't mean to miss the point, and I'm afraid you're far off base in suggesting that an inverted-L radiates part of the feedline or that feedline (coax-shield) noise has anything to do with an antenna configuration. The use of coax minimizes feedline noise, and shield-grounding the coax further reduces noise from either being brought into the shack or carried to the antenna from the shack. In an inverted-L, either a Balun or a choke is always used to prevent inadvertent feedline radiation. The vertical portion of the end-fed inverted-L is where the feedline ends and the antenna begins.

The real noise-limiting design of any beverage-style or inverted-L wire antenna is to ground one half of the Balun output. This is whether the coax shield is grounded earlier or not. That does affect signals picked up on the antenna wire itself, although experts are not agreed as to whether there is a measurable improvement in signal to noise ratio as a result of this. As Telemon mentioned, having a counterpoise or good RF ground could make a difference there. In my particular case, there is a marked improvement in signal strength and possibly some reduction in noise when the connection from ground rod to Balun is made. I also transmit through this antenna with pretty good results. The original concept of grounding one-half of a current-type wire-fed Balun for noise limiting came from an 1980's issue of Fine Tuning's PROCEEDINGS. I was borrowing the issue from a friend and cannot remember the original author of this but I don't believe it was the venerable John Doty to which it is lately accredited.

Is it accompanied by a "beep beep beep" sound about 6 khz away, then sounds vaguely like a time signal but is too fast? And, the whooshing sound goes "whoosh whoosh" (in quick succession) for every beep. I've encountered this before around 4850 khz, didn't know what it was. If it was DRM, well, good to know.

Radio Canada has some French broadcasts, you may be able to pick them up.
They are, however, directed at the East Coast USA and the Carribean.

Well, if I'm in second place it's a damned close second place! So close, in fact, that it's probably giving him wood. And if you look at his list, I'm on top of Evan. That's probably quite a thrill for the old goat as well. Of course, Evan's on top of Julie...and he probably thinks that's just icky. Keep your chin up, queerbarrel...Julie's a guy.

> 'queerbarrel' is very appropriate. We'll save that name for the 'Ace in
the
> Hole', if you get my drift...

I'd like to use it for our kill-filing friend. Ace doesn't seem to be much of a homophobe, whereas nearly everything that comes out of queerbarrel is of a homosexual tone. I've noticed he's now typing our names in backwards at the bottom of his posts. I think he's giving us some sort of clue there...backwards, back door...bottom...I won't go further, although I've heard his favorite pick-up line is "Can I push your stool in for you?" I imagine that only works in certain venues. You know...places where queerbarrel and three of his closest, dearest friends can sit comfortably, after they turn the bar stool upside down. It's not a bad line, I suppose. Better than his old standby, which I'm told was "May I be Frank with you?"

So true... I certainly see why he was drummed out of the armed forces. The 'Don't ask, Don't smell' program was started up because of his not so discrete liaisons in the 'mess' tent.

Unfortunately that's a CODAR signal which is used to measure the height
of waves at sea. The transmitters are located on the coasts. The
government apparently doesn't care if the CODAR stations in the US
interfere with the 60-m shortwave broadcast band, since they assigned
those frequencies to the CODAR institutions. It's an example of how a
group of people like shortwave listeners with essentially no voice in
government are taken advantage of by those in power.

Do you run the steel wire all the way to the radio? If not, how do you
connect the lead wire such as copper to the steel antenna wire without
galvanic corrosion?

That's a challenge I would enjoy. Anyone want to donate their Wellbrook
loop preamp for micro-disection?

I thought so too but I've seen of reports to the contrary.

If the coax shield of an inverted-L does not have a good RF ground,
which requires a short ground wire to earth, the domestic noise on the
shield can couple to the center conductor of the coax where it connects
to the antenna. The noise will then become part of the antenna signal to
the radio. That's the point I think you missed.

Well 'Ace', and I use the term loosely, when it comes to electronics I could correct you on so many things it would make your head spin but that's not what I'm here for. I can only assume you have a serious illness which is not being properly treated. Everybody has a last straw and you are it for me. Time to take Telamon's advice.

BTW- In case you don't get it, you're not the Steve in the quotes above so I wasn't even replying to you. My point was that frequency modulaton (FM) can be used with any wavelength, including shortwave (HF). It doesn't make any difference if the wavelength of shortwave is longer than the normal VHF/FM band.

Yeah! we can dream Mark. Contrary to popular opinion the possibilities of running out 1000m/3000ft of wire in South Africa are very slim, as most of the country is intensively farmed and there are massive power distribution lines gridlocking the country.
There are a couple of inland DX sites we have used in our dry semi desert area's, but they never yield the results of operating at the coast with much shorter wires.

I have had outstanding results at coastal shacks with my portable and compact Kiwa MW loop. Pity it is off the market now and no other commercially available loop on sale to my knowledge.

Pity about those JRC radio's - they would have done even better with a decent RX..!!!

.
* Diamond CA Series of Coax Surge Protectors
http://www.universal-radio.com/catalog/protect/2318.html
.
.
THE ANTENNA WIRE TO COAX CABLE CONNECTION :
.
IMHO - The best was to make the Antenna Wire to Coax
Cable Connection is to use a Matching Transformer Balun
UnUn or what is called a Magnetic LongWire Balun.
+ These devices make the Electrical-Mechanical (Joints)
Connections between the Antenna Wire Element; the
Ground Wire; and the Coax Cable Feed-in-Line.

+ These devices also help to 'match' the "Impedance" of
the Antenna Wire Element to the Coax Cable Feed-in-Line.
+ These devices provide a "Direct-DC-Ground-Path" for
any Electrical Discharge pasted through the Antenna Wire
Element to earthen ground.

DX ACE,
.
For me it is not about the End Insulator Failing or the Wire
Failing. I had nothing to do with the design or make-up of the
Insulator or the Antenna Wire. If they fail then that is on
their respective manufactures; not me.
.
However, I do build the "Joint" {Connection} between the Antenna
Wire and the Insulator; and if it fails; then that is on me.
To that end I have a tendancy to OCD in Over-Building the Joint.
.
When building a "No-See-Um" 30 AWG Magnet Wire Antenna with Mono
Fishing Line for Rigging. I build the Wire-to-Mono Joints with
Fishing Line Swivels and Double-Lay and Double Bite (Wrapped)
Knots.
- The Wire may break.
- The Mono may break.
- The Swivel may break.
But the Knots will hold [.]
.
i just try to build the best 'joint' i can ~ RHF
.
.

1704. Radial Wire Antennas - by Peter Chambers

Newsgroup: rec.radio.shortwave
Date: 2005-01-26 10:43:12 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1106736192.049767.176850@z14g2000cwz.googlegroups.com>

Why Radial Wires Antennas ? ? ?
.
READ - Radial Wire Antennas - by Peter Chambers
RWA => http://radiodx.com/spdxr/Radials.htm
.
* Radial Wire Antennas are a very simple and easy way
of obtaining amazingly good radio reception on longwave,
mediumwave and the lower shortwave bands.
.
* The Radial Wire Antenna is simply a length of wire
laid on the ground in a straight line. Connect the wire
to the receiver as normal and connect an earth, the same
as any longwire type Antenna
.
* The Radial Wire Antenna's wire length & direction
depends on the frequency and direction of the stations
you wish to hear.
.
* The Radial Wire Antenna is not a practical Antenna
for your home location, not in a town or city anyway.
If you are prepared to drive off to a good location
with your radio and wires for an afternoon and/or
evening of amazing listening from the relative comfort
of your vehicle, then read on.
.
Major Paragraph Titles:
- Why Radial Wires Antennas
- Wire Lengths
- Earthing
- Impedance Matching
- Low Angle Pick-Up
- Directional Characteristics
- DXing Locations
- Receivers and Connections
- The Wire and Handling Multiple Wires
- Directions, Bearings, Propagation
- Conclusion

I'm rather biased toward the 803a (I have a 15 year old
DX-440, myself), which among other things it can take
an external antenna fairly well without overloading.
It's nice for utility work.

I found an old ferrite rod antenna coil in my scrap box and would like
to know if it would be possible to hook it to my Philco 38-10 ?
It has the usual 4 leads on these antennas and I have no idea where
these leads should be connected.
Any and all information for my education on these antennas will be
greatly appreciated.
Thanks
James

I suppose if you're serious about chasing DX the cost of a dual axis rotor system would be small compared to the money you could toss at a radio upgrade.

Personally, I think it would be slick to do a dual axis rotor system with a yagi for radio astronomy.

I'd say that if you're chasing MW DX the rotor is an absolute 'must
have'; but I wouldn't say this where SW DX is concerned. I was sort of
hoping that the antenna would have directional characteristics above,
say, 4500 khz; but it sure doesn't seem to, at least in my location and
listening conditions. I guess I'll just have to resign myself to an
excellent omnidirectional antenna... :).

This isn't an answer, just a commit. The ferrite rod in my McKay Dymek DA 5 ferrite bar antenna has only a half dozen or so windings centered on the rod. The rod (it's been a while since I've looked at it) is aprox 8 to 10 inches long. Rob Mills ~

The Founders were not ''all Christians''. Franklin and Jefferson were
Deists. They did not believe in the Bible as any kind of holy book.
They didn't believe in unseen forces. The United States is the first
Post-Enlightenment government. It is an evolutionary step beyond the
shackles of religious tyranny.

Unfortunately, many of the stations on that AC6V list are no longer in operation. Many of them have been off for years.

Here is my list of QSL'd time signal stations:

RWM
RID
WWVH
WWV
YVTO, Venezuela
Radio Reloj, Costa Rica
VPS60, Hong Kong
JJY, Japan
HLA, S. Korea
LOL, Argentina
VPS35, Hong Kong
VPS8, Hong Kong
CBV, Chile
BSF, Taiwan
Naval Communications Station Darwin, Australia
EBC, Spain
PPR, Brazil
OMA, Czechoslovakia
OLB5, Czechoslovakia
BPM, China
ZUD, South Africa
VNG, Lyndhurst, Australia
VNG, Llandilo, Australia
CHU, Canada
ZSC, South Africa
Y3S, E. Germany
Radio Relogio Federal, Brazil

Many of these are unfortunately now off the air. And no, I still do not have a QSL from HD2IOA.

Well, there is a type of antenna configuration designed to be lain on the ground or even buried a couple of inches. It is made from coax, and is called a "snake" antenna (recipies are on the web in various places). Don't know how you'd do it - or if you could - with plain steel wire.

But more to the point, as best as I can tell, KVOO is an FM station - I don't see any AM listing for it. The rough figure for maximum reach of reception of an FM station is about 100 miles, as FM is line-of-sight transmission. DXers make FM catches exceeding that, of course, but that would be a rarity. 420 miles? I doubt it's possible.

The "snake" antenna configuration would likely improve your reception, though, of a lot of things. What kind of antenna config are you using currently?

Tony

If it's a resale of this one he bought with the gottahaveit1995 userid for $150
it's another example of him puffing up the description:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5742288776>

The original seller indicated it had some scratches and dings.

radio-mart says the one he's selling is in collector condition.

I'm sure he cleaned it up with something like Windex, but who knows if he fixed
the scratchy audio pot.

You don't get it - he uses HIDEEN BIDDER IDs - that means
he can sit and shill bid (using gottahaveit1995) and no one can
turn him in now. HE'S the one bidding it up and up and up, I'm
sure. Sometimes he does this a bit too much and wins his own
junk - then relists with 'deadbeat bidder - back on the market'
He's done it over and over again...

I didn't realize KVOO had switched to FM,I know KVOO used to be on AM because I could pick it up on my radio's that have AM band at night time but it would fade in and out.A little over five years ago I bought one of those CCrane radios that Art Bell and George Noory tout so much.I thought it would be much better for picking up KVOO is the only reason I bought that CCrane radio (are y'all listening,Art Bell and George Noory?) but that over priced,over rated plastic piece of crap CCrane radio didn't show me s..t! so I packed it up an sent it back to CCrane company.Then I bought one of those Sangean ATS whatever it is highest priced (I hate to say this,portable) portable shortwave radios from CCrane,I sent that radio back to CCrane company too.Only the antennas that were installed at the factory's are in my old beat up radio's.I suppose I could tune into KVOO with my computer though.There is a good Country Music radio station www.us963.com and a Bluegrass radio station and an oldies station and a lot more AM and FM radio stations here in Jackson but they hardly ever play any Western Ranch music.I like Polka Music too,but around here,it just doesn't exist on radio stations. cuhulin

OK I didn't restate the obvious, agreed.

The best place to terminate the antenna and mount the Balun is *at* the
ground rod, which means the connection is about 4 inches long. Ty-wrap the
Balun to the protruding ground rod. After applying coax-seal to the
wire-wrapped and then soldered connections, cut the bottom and slit one side
of a plastic beverage bottle to just fit over the Balun and tape the bottle
shut afterwards. Spray paint the bottle with bow-flex cammo and it becomes
part of the background, and weather-proofed for years of service. Some
designs advise terminating the vertical drop of the inverted-L about 6 feet
above ground. That's more important for a center fed or off-center fed
(dipole type) antenna than the end-fed wires. Users should have no problems

terminating the inverted-L at ground level, and sink a good ground rod (with buried radials if you desire) at that same point.

That particular station is Radio Canada International's DRM trasmission.
It should go from 9.795 to 9.805.

Other more narrow signals that sound like it are frequency division
multiplex telegraph signals. They usually sound a bit more ragged.

In both cases, they're a forest of closely spaced (100 Hz or so) FM
or Phase modulated subcarriers.

I have seen instances where he's repainted cabinets, but only if it's real nasty.

If you read his feedback, you'll see people have complained about "original paint" meaning a lousy repaint with the correct color.

On the Kenwood, he says "Cosmetically, it is in exceptional shape for its age as can be seen in the pictures."

"For it's age" probably means he didn't paint this one. (Otherwise, it would have been "mint".

It's been starting at 01:00 and fading out after 02:15 or so here in
Seattle. Makes taping the science program slot a pain in the arse,
as you get the first few minutes and then it degenerates into noise.

Things were a lot better Wednesday for the BBC morning frequencies.
(What a difference two days makes). 7160 was 10 dB over S9 about
16:00 UTC. Maybe it'll be better for the evening stuff.
Added note: Nope. Sigh.

Is that a pre-WWII tube radio?

A ferrite rod loop stick is both the antenna and the tuning coil for
the first RF amplifier (if the radio has one) or the mixer RF input.
So you'd have to go into the band switch and disconnect the tuning coil
for that band, and then rewind the winding on the loop stick for the
same inductance. Not worth the effort, IMHO.

You could make a tuned loop stick out of it by connecting the right value
of variable capacitor and then add a link winding of a few turns that
hooked up to the antenna and ground inputs. But that's yet another knob
to twiddle. (You'd probably be better off with multi turn wire loop a
couple of feet across).

William Thomas
Electromagnetic weapons "tests" in Iraq
Tue Jan 25, 2005 18:53

MICROWAVING IRAQ

"Pacifying" Rays Pose New Hazards In Iraqi
By William Thomas

On the rooftop of a shrapnel-pocked building in the ruins of Fallujah, a team of GI's stealthily sets up a gray plastic dome about two-feet in diameter. Keeping well back from the sight lines of the street and nearby buildings, they plug the cable connectors on the side of the "popper" into a power unit. The grunts have no clue what the device does. They are just following orders.

"Most of the worker-bees that are placing these do not even know what is inside the 'domes', just that they were told where to place them by Intel weenies with usually no nametag," reports my source, a very well informed combat veteran I will call "Hank".

The grunts call the plastic devices "poppers" or "domes". Once activated, each hidden transmitter emits a widening circle of invisible energy capable of passing through metal, concrete and human skulls up to half a mile away. "They are saturating the area with ULF, VLF and UHF freqs," Hanks says, with equipment derived from US Navy undersea sonar and communications.

But its not being used to locate and talk to submarines under Baghdad.

After powering up the unit, the grunts quickly exit the area. It is their commanders' fervent hope that any male survivors enraged by brutal American bombardments that damaged virtually every building in this once thriving "City of Mosques", displacing a quarter-million residents while murdering thousands of children, women and elders in their homes lose all incentive for further resistance and revenge.

A dedicated former soldier, whose experiences during and after Desert Storm are chronicled in my book, Bringing The War Home, Hank stays in close touch with his unit serving "in theater" in Iraq. When I asked how many "poppers" are being used to irradiate Iraqi neighborhoods, he checked and got back to me. There are "at least 25 of these that have been deployed to theater, and used. Some have conked out and been removed, so I do not know how many are currently active and

broadcasting."

Hank is still losing friends in Iraq, where front-line soldiers put their current casualty figures from all causes psychological crackups and suicides injured.

Hank also blames those at the top for hospital counts of upwards of 65,000 children killed since the 2003 invasion. He is concerned that innocent Iraqi families and unsuspecting GIs alike are being used as test subjects for a new generation of "psychotronic" weapons using invisible beams across the entire electromagnetic spectrum to selectively alter moods, behavior and bodily processes.

"The 'poppers' as they are called, are capable of using a combo of ULF, VLF, UHF and EHF
wavelengths in any combination at the same time, sometimes using one as a carrier wave for the others," Hank explains, in a process called superheterodyning. The silent frequencies daily sweeping Fallujah and other trouble spots are the same Navy "freqs that drove whales nuts and made them go astray onto beaches."

MICROWAVING IRAQ

The Gulf War veteran observes that occupied Iraq has become a "saturation environment" of electromagnetic radiation. Potentially lethal electromagnetic smog from high-power US military electronics and experimental beam weapons is placing already hard-hit local populations-particularly children experiencing serious illness, suicidal depression, impaired cognitive
ability, even death.

American troops constantly exposed "up close" to their own microwave transmitters, battlefield radars and RF weapons are also seeing their health eroded by electromagnetic sickness. It's common, Hank recalls, for GIs to warm themselves on cold desert nights by basking in the microwaves radiating from their QUEEMS communications and RATT radar rigs.

Constant microwave emissions from ground-sweeping RATT rigs and SINGARS mobile microwave networks are much more powerful than civilian microwave cell phone nets linked in many clinical studies to maladies ranging from asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams and cancer.

Even more powerful US military radars, radios and "jammers" blasting from ground bases and overflying aircraft add to this electromagnetic din.

This is bad enough. But this is also Iraq, Hank says, where ever-present sand acts as miniature quartz reflectors, unpredictably amplifying the ricocheting electronic smog so thick that if it were visible, every vehicle in Baghdad and the surrounding Sunni Triangle would be driving blind with their headlights on.

THE GIFT THAT KEEPS ON GIVING

This is grim news to friend and foe alike constant adrenal stress, waterborne pollutants, infectious sand fleas, dehydration, pharmaceutical drugs and exposure to radioactive Uranium-238 fired in "hose 'em down" exuberance by US ground and air cannons and cruise missiles.

As Hank puts it, DU is "the gift that keeps on giving." For the next four billion years, medical investigators say, large populated expanses of Kosovo, Afghanistan, Puerto Rico and Iraq will remain lethally radioactive from Made In America depleted uranium dust.

What kind of people would do this?

Clinical tests have repeatedly shown how microwaves "rev up" incipient cancer cells several hundred times. Triggered by nuclear radiation, and turned rogue by electromagnetic warfare unleashed by US forces, human cancer cells have been found to continue proliferating wildly after the power source is turned off

MICROWAVING WOMBS AT GREENHAM COMMON
While the mobile microwave weapons currently deployed in Iraq may or may not lead to lasting harm, rooftop "poppers" and "domes" left to radiate for days at a time are irradiating unsuspecting families already coping with illness, wounds, hunger and the stress of losing homes and loved ones, whose rotting corpses cannot be buried under the sights of marine snipers.

A preview of what lies in store for long-suffering families in Iraq can be gleaned from Greenham Common, where the British Army reportedly used an electromagnetic weapon against 30,000 women who had camped for nearly two decades around that UK military base to protest the deployment of nuclear-tipped US cruise missiles.

One day in the summer of 1984, more than 2,000 British troops suddenly pulled back, leaving the fence unguarded. Peace mom Kim Besley recalls that as curious women approached the gate, they "started experiencing odd health effects: swollen tongues, changed heartbeats, immobility, feelings of terror, pains in the upper body."

Besley found her 30-year-old daughter too ill to stand. Other symptoms typical of electromagnetic exposure included skin burns, severe headaches, drowsiness, post-menopausal menstrual bleeding and menstruation at abnormal times. Besley's daughter's cycle changed to 14 days and took a year to return to normal.

Two late-term spontaneous miscarriages, impaired speech, and an apparent circulatory failure prompted the women to begin monitoring for a directed-energy beam, Using an EMR meter, they measured beams sweeping their camp at 100-times normal background levels.

Another harrowing example involves the sudden illness and cancer deaths of US embassy staff in Moscow after being deliberately targeted with

very weak pulsed microwaves by Soviet experimenters and fascinated CIA onlookers running "Project Phoenix" in 1962.

Very Low Frequency (VLF) weapons include the dozens of "poppers" currently deployed in Iraq, which can be dialed to or "long wave" frequencies capable of traveling great distances through the ground or intervening structures. As air force Lt Col. Peter L. Hays, Director of the Institute for National Security Studies reveals, "Transmission of long wavelength sound creates biophysical effects; nausea, loss of bowels, disorientation, vomiting, potential internal organ damage or death may occur."

Hays calls VLF weapons "superior" because their directed energy beams do not lose their hurtful properties when traveling through air to tissue. A French weapon radiating at 7 hertz "made the people in range sick for hours."

GI's "DRIVEN NUTS" BY ELECTROMAGENTICS IN IRAQ

Like so many other American blunders among the ruins of Babylon, the intended microwave "pacification" of rebellious neighborhoods is having unintended effects. In actual "field-testing" in the Sunni Triangle, Hank has learned that the hidden, dome-shaped devices "are removing inhibitions". Armed individuals, already highly motivated to kill American forces are reportedly "losing all restraint" when exposed to the electromagnetic beams.

According to Hank's buddies in Baghdad, the frequency-shifting "poppers" "are having some remarkable effects on the locals as well as our own people." But these effects differ. Possibly, Hank surmises, because Americans come from daily domestic and military environments saturated with electromagnetic frequencies, while many Iraqis still live without reliable electricity in places largely free from electromagnetics before the American invasion.

According to members of Hank's former unit, constant exposure to invisible emissions from radar and radio rigs microwave weapons says. "It makes them stupid for two or three days."

The Desert Storm veteran compared the emotional effects of constant exposure to military microwaves to a lingering low-pressure weather system that never goes away. "You feel way down for days at a time," he emphasizes

As a consequence, AWOL rates among "spaced out" US troops are as high as 15%, Hank reports. For many deserters, it is not cowardice or conscience that is causing them to absent themselves from duty. "They are feeling so depressed," Hank explains. "They don't feel good. So they leave."

According to Hank's front-line buddies, Iraqis exposed to secret beam weapons "get laid back, confused and mellow, and then blast out in a rage, as opposed to our folks going on what could only be called a 'bender', and turning into a mean drunk for a while."

Once they wander away from direct electromagnetic-fire, startled GIs come to their senses. They return to their units, Hank explains, saying, "What was I thinking?"

The recovery rate among US troops "seems to be about a day or so, where the locals are not getting over it in less than a week or more on average," Hank has learned.

It is Hank's hope that his revelations will prompt public debate over the secret use of electromagnetic weapons in Iraq. But lost in the arguments over these supposedly "non-lethal" weapons is a much bigger question: What are Americans doing there?

Whether soldier or civilian at home, it is our imperative duty to stop supporting those responsible for ongoing "weapons tests" in Iraq. As electrochemical "beings of light," the strongest electromagnetic force on Earth is human conscience, acted upon.

Author's Bio: William Thomas

After resigning his US Navy Reserve commission, William Thomas subsequently served
five months with a three-man environmental emergency response team in the Gulf during and immediately after Desert Storm. He has written about military electromagnetics in Scorched Earth and Bringing The War Home, and has documented other microwave hazards in his new book "Dialing Our Cells."

1768. QSLs outstanding - FWIW

Newsgroup: rec.radio.shortwave
Date: 2005-01-26 20:19:10 UTC
From: bpnjensen <bpnjensen@yahoo.com>
Message-ID: <1106770750.441979.7790@z14g2000cwz.googlegroups.com>
Source record: 5715

Just FYI, I have two QSL reports outstanding for stations heard in November and December. One is to RAI Rome for their 0055 - 0115 English broadcast to NA on 11800 kHz; not an especially meaty broadcast, just a bunch of news and some unidentified (but pretty good) music. I have heard and read that RAI takes awhile to verify.

The other is to SLBC Colombo, Sri Lanka, for their early AM UTC English broadcast on 9770 kHz. They played a bunch of cool old songs that were readily identifiable, including several Christmas songs, followed by some religious discussion. Sent with an IRC. Given the natural crisis in Sri Lanka of the last month, I don't expect this one anytime soon - but I'll let you know.

About five years ago,I emailed the editor at that main online newspaper in Keflavik,Iceland.I asked him (in english language because that is the only language I know) if they were ever going to have an english language link to their newspaper.He emailed me back and told me to check back later.I forgot all about it,,, later.And I am not even Icelandic either.

John,

Yes, I know what you mean about coastal DX. I live about three miles from the coast. I have two coastlines, living on an ithsmus, so lots and lots of water surrounding my QTH.

I was recently on vacation on the west coast of the North Island of NZ, in a town called Kawhia, which has a large harbour. I took a Sony ICF-SW55 with me and a piece of wire about three metres long! I ran the wire along the eaves of the small house we were staying in and connected it to the external antenna jack of the Sony.

The first station I heard was an amateur, CT3MD, on Porto Santo Island, Madeira, off the coast of west Africa. He was talking to a station in Sigatoka, Viti Levu, Fiji. This was on 20 metres. The advantage over listening in Auckland is how QUIET the radio is. Its a very small town, so no electrical noise etc. And no light pollution. There are so many more stars there!

I had the pleasure of visiting your beautiful country, a couple of years ago. Didn't make it to the Western Cape, as I was working. But did get to see some of the amazing animals you have roaming around!

Mark.
Auckland
New Zealand.

Send me $10,000 cash and I'll personally guarantee you getting into heaven. You have my word on it. A mere $5k and I'll get to the 'gates' - then you're on your own. But you can still play even if that's too rich for you - $2,000 and I'll put in a LONG conversation about you right after you kick. Should get you an audience, albeit the $5k option is better. But hey - just go full tilt and pay the 10. Then it's a sure thing. Email for where to send the cash. (Read all of the above with a silly Eastern accent, of course)

Poppers? --- I WANT ONE !!!

-Could we set up a popper at my place? They sound like they are so cool ---
I volunteer to be experimentally irradiated on the condition that I get one
to keep.
-Is there any way I could buy my own popper from eBay or anywhere?
-Could one be powered using the new 2500mAh NiMH rechargeables?
-If the popper was connected to say, a 4 element yagi antenna, how
directional would the main lobe be?

The 909 is a good radio. (I like mine.) But it can be a bit of a battery
hog. Don't know about the 305.

My sources tell me the simple effective countermeasures for these devices has been found to be the wearing of a tin foil hat. Sort of brings back memories of how the North Vietnamese defeated our laser-guided bombs by simply obscuring the target in smoke.

Lloyd

1788. Building an antenna

Newsgroup: rec.radio.shortwave

Hi,

Can Joe or anyone else explain to me a few things; I am
trying to set up a antenna on the roof as reception is
really bad using the indoor whip (lots of interference
I live next door to a restaurant ventilator farm and I
think that may be a problem). Anyway I am thinking of
getting a length of wire and just laying it on top of the
roof under a couple of bricks to stop it getting blown
around. The thing I don't get is the connection down
the side of the house - I need to use a different cable yes?

I have heard people specify a length of "radio coax" is
suitable but I do not understand how this could be any
use without the shielding being grounded - could someone
explain?

My roberts R861 has a minijack anntena input - which has
2 connections on the plug - are they both used or is
only one? If I use a thick cable to run into the house
would I need any special attention to connect that to
the minijack?

What sort of length wire should I use on the roof, is
it just a case of the longer the better?

Thanks in advance for any advice

bestwishes
laura

>I habe never owned a Sangean ATS 909 nor do I know anyone who does.
>According to PASSPORT TO WORLD BAND RADIO, the Sangean/Roberts works
>BEST off its AC adapter as it "eats" batteries. An external antenna is
>necessary also, as it lacks sensitivity with its whip (according to
>them).
>
>A long wire, or loop antenna, mounted on your roof would be ideal. Try
>buying a length of insulated wire, two ceramic or equivalent stand-off
>insulators (to isolate the antenna from whatever support you use) and
>some lead-in wire; attach the appropriate plug to the lead-in to attach
>to the radio and you're in business. No separate ground is necessary,
>but make sure you DISCONNECT the antenna whenever the radio is not in
>use and, especially, during local thunderstorms. (NEVER use ANY
>electronic appliance during a thunderstorm; storms only last a
>half-hour or so.)

>
>Do NOT let your antenna proper or the lead-in touch anything metallic;
>that will degrade the signal.

I been picking these signals up here on 8020MHZ. Very strong! S9 all day and night! In fact I touched the radio and noticed it was also very warm? It's 32 degrees outside??

Years ago when I first came online, if you wanted to join a mailing list, you would normally subscribe to Majordomo, Listserve or Listproc.

These email mailing list programs where difficult to use at first, but after a while they were cool to use.

I wonder which of these mailing program came out first?

I was wondering if anyone knew of a host address, that I could use the NETWIDE or LIST command, so that I could then find a mailing list to join?

I hope that they are not disappearing like BBS & TELNET. And I hope that newsgroups as we have them do not disappear either!

Some could say, well, people are making computerizing user-friendly. And I had always said: User-friendly is User Limited!!!!!!!!!!!!!

Hey, I still use Qbasic and DOS!

It is funny because, even in the computer age, some people could be old fasion like me. LOL!

73!

Very worrying isn't it?
My sensors detected that I was being targetted by stuff with wavelengths
from 450 to 750 nm today - with so much energy it must have been
generated by a NUCLEAR REACTOR.

Now, Americans, IIRC, have this happen all the time - but for us in the
middle of Dartmoor National Park, in Devon UK, in January - this is
unheard of.

OK, we get used to being targetted by hydrogen bombs (well,
hygrogen/oxeygen) of about 0.4cm calibre We have purpose designed
protective equipment to deal with that. But not the nuclear fallout stuff.

Luckily, someone discovered many years ago that a knotted hankie on the
head is very effective at dealing with the stuff - particularly in areas
of high ozone concentration.

Eye Poppers? Two or three camera flash bulbs,a 9 volt battery and an electric switch.Do not look at it when you throw that switch.It dilates the cornea's of the eyes,causes tempory blindness for about 15 minutes.Have fun kiddies,making your very own Eye Poppers.

Right if you want to go to prison! Technology today will uncover this type of stuff, if you shoot you had better be sure that "your life was in danger". BTW a guy 5 feet from you waving a knife does not "place your life in danger", if he moves towards you saying "I'm gonna cut out your heart" that's another story, aim straight and be sure he stays down!

NEED HELP WITH BILLS?

WANT TO EARN CASH?? NO SCAMS!! NO TRICKS!! Did you fall for the DON LAPRE/CARLTON SHEETS SCHEMES. You're not the only one! Although these programs do have some valuable info, they don't tell you anything that you can't find at your local library. Just look up "mail order" or "Money Making Opportunities"! Yeah Don Lapre is rich but his wealth

comes from selling us his program for $39.99. KEEP READING!!! IMPORTANT!!! CHECK THIS OUT, BELOW IS A PERFECTLY LEGAL PROGRAM THAT IS MORE EFFECTIVE THAN DON LAPRE'S AND IT ONLY COSTS $6.00! HOW TO TURN SIX DOLLARS INTO SIX THOUSAND: READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK! I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars WITHIN WEEKS with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam," but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well, GUESS WHAT! ... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,100.00! In the third week I had over $8,750.00 and it's still growing. This is now my fourth week and I have made a total of just over $17,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy! KEEP READING TO FIND OUT

HOW THIS WORKS!!! Suggestion: Read this entire message carefully! (Print it out or download it). Follow the simple directions and watch your money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage on only 6 envelopes...one time only...no repeat mailing) IMPORTANT: This is not a rip-off; it is not indecent; No Misleading promises or claims; it is not illegal; and it is 99% no risk - it really works! If all of the following instructions are adhered to,

you will receive extraordinary dividends. JUST KEEP READING!!! PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list. Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the US Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:

#1)Tena Dickson, 3318 Q. Street, Richmond, VA 23223
#2)Lleann Canaday, 1000 Drew CT, Cheyenne Wyo. 82007
#3)Joey Mercado, 4825 W. Dakin, Chicago,Il 60641
#4)D.D. Ihly, PO Box 220474, Anchorage,Ak 99522
#5)N. G. Samahan 811 Cape Kennedy Dr. San Jose, CA 95133
#6)R. S., 1560 Brown Ave, Galesburg, Il 61401

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. :) This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill

in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars

in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

> > ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- > >

Step 1) You do not need to retype this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste.' This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT. ** > >
HERE'S HOW $6.00 DOLLARS TURNS INTO THOUSANDS!! Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM

200 letters with my name at #2 and they each only receive 5 replies,

that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday? JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will really work. GOOD LUCK!!!

I've come to conclusion people's brains are being affected by environmental pollutants, pesticides in food, or microwaves from all the cell phones. I mean it. Kids all over internet can't spell simple words, articulate or make any real sense out of things. I just don't know. It sure seemed to me people and kids were much smarter just 20 years ago. I don't get it anymore. It seems the seams of the world are slowly rotting away. No I'm not surprised he finds 20 new morons every week....

There was a great television documentary on PBS by Ken Burns of
Armstrong's life . It was called 'Empire of the Air'. It was both
inspiring and tragic.

I mounted my balun in a plastic electrical junction box with a cover
gasket, the kind used with plastic conduit. The ground wire to the rod
is about 2-feet long.

When I saw the photo of the 5900 I thought the thing absolutely mint,
absolutely collector quality, absolutely jes great, on the outside.
Can't rate the inside and workings until I would have heard it. But
them outsides is absolutely....yeah! I would have been bidding if ebay
had not totally screwed my account to the poing that it is unsuable and
I can't get a new account using my real name and my real address. I
will not open a false account. screw ebay.

From the DX-398 Manual at URL:
ftp://80.162.141.166/manuals1/radio_shack/Receiver_-_DX-398_Owners_manual@8.pdf

TUNING SSB STATIONS
Your receiver receives both USB and LSB transmissions. Follow these steps to receive SSB stations.

The page (18) goes on to give a step by step tuning procedure

"making it understandable" is covered as follows (from the DX-398 Manual

Note: SSB stations sound distorted when you tune to them in the normal SW band. To help you find SSB stations, watch for deflections on the signal strength indicator. Since SSB is transmitted with a suppressed carrier, the signal strength indicator will move more quickly when there is a transmission and more slowly during pauses in the transmission.

When you have located an SSB station, press AM MODE to receive the transmission. Repeatedly press AM MODE to switch between USB or LSB transmissions (try LSB for frequencies below 10 MHz or USB for frequencies above 10 MHz).

4. Set STEP to SLOW then readjust MANUAL TUNING slowly for maximum intelligibility.

1812. SSB On the Lowe HF-150??

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 02:20:38 UTC
From: Lucky <Lucky@TheBotStopsHere.com>
Message-ID: <10vgjvkru9rnc4d@corp.supernews.com>

Is this mainly a program listening rig?
How is the SSB on it with no PBT or shift?

I guess you can't even compare it to a Drake R8 huh??

Any opinions?

Thanks
Lucky

That's strange, since they're there, albeit with what seems to be
reduced power. Tonight, at 0200 Jan 27, the signal was definitely there,
but only popping above the noise threshold occasionally. That weird
heterodyne like noise is still there on 6000. I can null it with USB
mode and hear Havana underneath it, but only weakly.

Now that is weird. I've also noticed that the 9525 frequency usually
used from 0200-0400 is going off at 0300. Apparently they've shifted its
schedule up one hour. I haven't checked to see if 6135 is now signing on
at 0300. Passport says that 12095 at 1500 is to Europe from "various
locations", probably Rampisham at this hour.

And it's probably tuned to NPR or Air America. :) He says he has several SW radios, but most, heck, ALL of the stuff he posts is articles posted elsewhere on the internet about politics, Iraq, or various left wing causes. By the way, if anybody out west is hearing Air America on 1240 khz (MW band), it's "Talk City" (not sure of the call letters) from Sacramento, California.

You're in South Africa, John? (My newsreader snips off sigs in replies.)
That's pretty damn good. 58 watts isn't a whole lot of power.

Of course, in these sort of suits, it's always the LAWYERS who make out like bandits while the guys represented get peanuts. I've heard of lawyers in class action suits making NINE FIGURE paydays (over $100,000,000, or $100 MILLION) while each of the people being represented get something like $3 each. Not bad for, what, 10-12 total hours of work. Lawyers are holding our system hostage for big bucks and writing deliberately obfuscating laws (all politicians are lawyers, although unlike John Edwards most have never tried a case) so that anybody can be charged with anything and the lawyers will make even MORE in taxpayer paid legal fees.

Something I intend to experiment with, is running two radials from the Balun/ground/feedpoint; one under the entire length of the antenna and the other 180 degrees away from the feedpoint. Since this antenna was deliberately located as far from the house as possible (on the property line), I could not run radials in a 360 degree fashion. But I think if radials will help at all, two of them (at 0 and 180 degrees) would show results. Ever try this? The antenna is for 2182 thru 16000 khz marine.

The SSB is excellent; the synchronous AM, all 4 options, works great; as
do the AM and AMN.

Hi Laura,
You have the right idea <S>. The antenna should be a couple feet above the surface, and connected to supports at either end by nylon cord or something else non conductive. You can connect the antenna to the center conductor of some coaxial cable and run it into the house and connect it to a connector that matches a connection point on the backof your radio. I would connect the wire from the antenna at the end of the wire closest to where you want to connect the coax.

The ventilation units you mention have electric motors in them, and that may be the reason for the interference. If possible, route your antenna wire in a direction away from the location of those ventilators that is not broadside to them. That might help a bit.

Best wishes for your success. I'd be glad to see a post of what you have heard :) mm

PEACE + We are the Providence of God

Extreme Fajitas? Hmmm, sounds interesting, I must admit.
I was wondering why I was waking up all thirsty and dizzy --- and here I was thinking it was all the vodka of I've been drinking --- silly me.
But seriously, about these EM Poppers --- do you think the CIA would be interested in deploying a popper array in Canada?
First we would program the poppers to make people vote republican, and then get the neo-conservative think-tanks to come up with a way to divert soft campaign funds into funding a contract to deploy thousands of poppers nationwide along the northern border provinces of BC, Alberta, etc.
Then comes the sneaky part, once the yankees are all thirsty and dizzy and voting republican, we set up huge rocket motors pointing off into space at wierd angles and run them night and day, this would alter the earth's spin, and push the geographic pole towards russia, having the net effect of pushing canadian territory into a more southerly latitude where it's warmer so the pot plants grow better.
This information is top secret, I'm relying on the tight knit NNTP community to keep this under wraps.

I agree. Something is going on. People have become so jaded it's incredible.
You know how many hit and run drivers have hit people on the road here in
Florida and never stop? I see almost every couple weeks. Mother and bay hit,
the driver never stopped. Old man dragged for blovks and killed. Driver

never stopped. Just last night
on I-95, man cause accident, kills mother and daughter, father survived.
Driver got out of the car and ran. They haven't found him yet.

I know I'm sounding like Brother Stair, but I think our whole society and
culture is rapidly fading into one big free for all. Something is going one,
that's for sure...

Lucky

starman <starman@tech.net> wrote in news:41F75645.281C1216@tech.net:

Dear Mark and Starman, rather than neurose this link into infinity by reasserting that the RS232 Standard was omitted since Yaesu had an insidious plot to overthrow the economy by forcing people to buy the adapter, why don't you offer evidence, in the form of URLs, to pages that discuss the prevalence of RS232 ports on other similarly priced equipment of the time?

Visit here: http://www.dxing.com/rx/r71a.htm for information on the Icom R-71 and R-72.

Here's the back of the Icom R-71

http://www.universal-radio.com/catalog/commrxvr/r71diar.jpg

Here's the back of the Icom R-72

http://www.universal-radio.com/catalog/commrxvr/r72rear.html

Apparently their RS232 Jacks fell of before these photos were taken.

Notice they offer an "OPTIONAL" CT-17 CI-V Level converter. Here we go again, the conspiracy theories will abound, this underhanded manufacturer must have been trying to destroy the US economy by requiring their customers to actually buy accessories rather than incorporate them into the radio, "Oh the Humanity".

Gee, the Drake R8 and the R8A had the RS232 jacks, but they retailed for $400 more. Isn't that special. You pay more and you get more, what a concept.

Does the Lowe 150 have an RS232 Jack, I don't think so!

Strange, I thought that this was an elaborate plan by Yaesu?

The proof is in the pudding. Oh, and by the by, for the correct phrase, please visit here: http://ask.yahoo.com/ask/20020903.html

So you can see, the presence of RS232 Jacks, on equipment of that era, was limited to units retailing for nearly $1000. But why let facts get in the way of a needless gripe?

Walk around outside with the whip extended and see how the interference and noise is. If it is much less, but you're still close to the fan farm, then you may be dealing with interference inside your home.

The best approach, if you have the right property size, is to run a wire as far away from the restaurant and your house as possible (on top of a wooden fence works), and use a balun (you can use a TV matching transformer for now) and feed it into your house with coax. For your application, outdoor TV 75 ohm coax will do, and you can get an adapter for the end to go to the mini-plug. Radio shack sells everything you need. Don't forget to ground the shield with a ground rod.

Those are both bells and whistles, very uncommon even thirty years ago,
and only slowly moving into more common appearance, and towards lower
priced equipment.

Good SSB means good stability, good selectivity (sufficiently narrow,
and sharp skirts) and a product detector. If it's got that, then it's
good for SSB.

The other things may help under some conditions, but people have lived
without them.

1832. Re: Questions on Inverted L antenna

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 04:42:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1106800935.626273.56390@f14g2000cwb.googlegroups.com>
Source record: 5829

JP,

If IIRC the one Radial that helps the most, is the one
that lays directly under the Horizontal Out-Arm of the
Inverted "L" Antenna.

This is why I suggest that 'if' possible to Flip Starting
Point (Back-to-Front) with the Vertical Up-Leg of the
Inverted "L" Antenna and have the Coax Cable Feed-in-Line
lay directly under the Horizontal Arm of the Inverted "L"
Antenna.

READ - Flipping the Inverted "L" Antenna 'Back-to-Front'
= Better Performance
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2013
http://groups-beta.google.com/group/rec.radio.shortwave/msg/6079890656d94af1

Maybe some one could use some software amd 'model' a
Shortwave Listener's (SWLs) Inverted "L" Antenna with
a single Ground Radial directly under the Horizontal
Out-Arm.

1 The 'small' SWL (V1:H2) Inverted "L" Antenna using a
15 Foot Vertical Up-Leg and 30 Foot Horizontal Out-Arm
Plus 30 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.
.
2 The 'medium' SWL (V1:H2.5) Inverted "L" Antenna using a
20 Foot Vertical Up-Leg and 50 Foot Horizontal Out-Arm
Plus 50 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.

3 The 'large' SWL (V1:H3) Inverted "L" Antenna using a
25 Foot Vertical Up-Leg and 75 Foot Horizontal Out-Arm
Plus 75 Foot Ground Radial directly under the Horizontal
Out-Arm section of the Antenna.

Test Results should be provided for these Shortwave Bands :
@ 60M Band ~ 5 MHz
@ 49M Band ~ 6 MHz
@ 31M Band ~ 9.7 MHz
@ 25M Band ~ 11.8 MHz
@ 22M Band ~ 13.7 MHz
@ 19M Band ~ 15.5 MHz

iane ~ RHF

CRYSTAL CLEAR RECEPTION
OVER EUROPE ON 9290 KHZ

If you are a programme producer and would
like to be heard all over Europe on short wave
with a solid signal look no more.
1/ Operated by KREBS-TV in Ulbroka Latvia,
It is a Good way to be heard.
2/ The cost is low - 30 English pounds for 1 hour
3/ The frequency is 9290 khz
4/ The power is 100 KW
5/ The transmitter site-Ulbroka near Riga in Latvia
6/ Beamed to Europe
For more information visit this website
http://www.listen.to/emr/ulbroka.htm
If you are interested in this relay service please
E-mail - info9290@blueyonder.co.uk and we will
Pass your message on to KREBS-TV in Ulbroka.
GOOD TRANSMITTING

Source record: 5833

Hello Laura,

The idea of walking around your area (and the roof) with your radio in hand to see if interference is greater or lesser at various locations is sound. See if you can find a place which is relatively noise-free. I'm afraid a length of wire just lain on the roof will probably be unsatisfactory; it should be raised much higher and must not touch anything. It should be attached to ceramic (or similar) insulators and those insulators affixed to supports, with suitable strain-relief. You can use coaxial cable (RG-6 or RG-8) as a lead-in, or you can even try a twin-lead (300 Ohm) wire and terminate that in a 3.5 mm plug. If you do use coax, I have found that Radio Shack does indeed sell adapters for attaching it to your radio. I have used a BNC connector at the end of coax, then a BNC to RCA adapter, and finally an RCA to 3.5 mm plug adapter to connect an outdoor antenna to a portable radio (I did this years ago when I was able to have an outdoor antenna; it worked just fine.) I have done something similar to allow my Wellbrook antenna to be used with my Sony ICF-SW7600GR.

If, however, you find that in your location there is nowhere without electrical noise, you've got problems.

Are those restaurant ventilators ever turned off, perhaps in the middle of the night? If you try your radio then and find no interference, you've found its source.

If those machines are indeed the cause of your interference, the only type of antenna which can overcome that (to a greater or lesser extent) is a balanced loop design, such as the Wellbrook, and, as you know, they are expensive (but well-worth the money if you can afford them). What you'll spend or do depends just how serious you are about short wave listening.

If you find that placing your radio (using its whip) near a window on the side of your house farthest away from the ventilators results in lower noise levels, you might try an AOR WL500 Window Loop Antenna which can be mounted in that window. It is a loop of unbalanced design, according to PASSPORT, but may help reduce some local electrical noise. In my case, I tried it before I bought the Wellbrook ALA 330S and found it to be a great help in my location, better than any other antenna I had previously tried (I still use it with my Satellit 800), and it is a great match for a portable radio (the Sony AN-LP1 is also a good antenna for portables, but, in my experience, does not reduce local electrical noise at all). It terminates in a BNC so the Radio Shack adapters I mentioned above will easily adapt that antenna to your radio. It may be worth a try though it, too, is expensive and, frankly,

is no match for the Wellbrook. If the WL500 works fairly well, then the Wellbrook will work very well.

I hope that is of some help to you. Some of the other posts here also have good ideas. Antennas are "scientifically" designed. But "science" is no good at all when it comes to determining what will work at a specific location. Only trial and error will tell you that.

All the best,

Joe

1839. Clicking from TV

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 06:07:16 UTC
From: Ric Trexell <rictrexell@vbe.com>
Message-ID: <10vh17v9a8dd8bf@corp.supernews.com>
Source record: 5834

I'm currently using a Grundig YB 400 but I'm sure this would happen with any shortwave, but my problem is the clicking of the TV nearly across the whole spectrum from 1-30mhz. There are spots where it doesn't bother much and if the signal from the radio station is strong it is not a problem. I was wondering if an outside antenna would improve this or just make it worse? If I turn on the TV and listen to the radio it isn't there so I'm assuming it is from the remote control part of it. I used to have an old TV with out a remote and it didn't bother. I have thought of getting a better radio at times but this clicking has made me wonder it it is worth it. If it weren't for watching my own videos and the news, I would know what to do with the TV, but I really don't want to see if it will support the weight of a bull dozer just yet. Got any ideas as to what I should do? By the way, this is heard even when the AC line cord is not used. Ric in Wisconsin.

HI Ric,
If it were me, I'd be very careful with that TV. If the clicking sound is coming from the TV and not the radio and the sound happens even with the TV turned off and unplugged, it may be an electrical arc in the TV - that might be a fire hazard.

If you feel it would be worth the expense you could take the tv to tv shop to be checked out. I don't really know what else would make a clicking sound on a tv.

It's a temporary setup, So I just used a wire nut (Marrette) filled with Penetrox, an anti oxidant grease, before it was put on the twisted coax centre and the steel line. I positioned the closed end upwards, so that it wouldn't collect rainwater.

A ground wire then runs down to the clamp on water pipe underneath. That's the only side I have the coax grounded on. Then the coax runs through the attic and down to the push button switch selector, which feeds the 'radio of the day'.

A matching transformer didn't seem to make much difference

mike

Telnet is still active. Also still a number of BBS's out there (FidoNet is still active as of a few months ago).

You're right about operating systems. It may not have been pretty, but I could do a lot more with DOS and BASIC. Besides, it gave me a feeling of accomplishment to build things myself from the start.

Someone else might chime in here on this one but if I'm not mistaken using the coaxial cable in that fashion actually defeats the purpose as it should be terminated in its characteristic impedance at both ends to be effective.

I seem to recall some effects of capacitance coming into play when used as you've described, and what happens there is that the coaxial cable is simply acting as a very long capacitor which might actually act as a block to some frequencies.

I'll have to look through the literature when I get a chance.

Depending upon how you have it hooked up you might not have noticed any difference with a matching transformer if it was not attached properly.

Just so everybody can enjoy this, what is the appropriate decoder?
```

1847. Zenith Transoceanic works great!!

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 12:15:23 UTC
From: Bill <kc4pe@bellsouth.net>
Message-ID: <iW4Kd.20274$ky2.6454@bignews4.bellsouth.net>

I am the proud owner of a Zenith Transoceanic R7000 portable radio. This Zenith is the last run of radios when they shut down production of this famous series ....well the band switch lost its click-click,
Now where in the world are you going to get this fixed?
Well come in Mr Allan Jesperson of "Great Northern Vintage Radio's" Minneapolis, MN.
I sent him the radio, he repaired it and aligned and tuned up the receiver...and I'll tell you what...against my Sony SW77..AOR 7030 ..it doesn't miss a beat...and the audio quality is wonderful!!

So if your in need of help contact Allan at
http://www.gn4radios.com
By the way he has no idea I'm writing this, but I know how stressed I was, when the Zenith when South...but now am happy I found this fellow and wish all you folks to have knowledge of this great service!!

-Thanks,

Bill

I have one of those as well. Nice radio. I used it as a kid.
It needs work badly. What did he charge you for the fix?

fidelity other than perhaps hurting it off moved too far.

The difference between the R8 and the Lowe is that the Lowe is built
tremendously better and the Sync modes work as well if not better.

Hello friends
I'm in a condo. I just received a fantastic receiver (FRG100B)..I'm currently running a homebrew "Heli-Rope" Antenna (from June 1971 QST) hanging on the wall. Just out of pure curiousity, have any one of you run indoor antennas? What kind? How did yours work?
Thanks 73 Greg WDX9KHY

"Their system uses repeaters placed at every one kilometer, (0.62 miles) and
requires power lines to be modified to reduce interference with the data
signals. The estimates were based on computer models, and that the data
speeds available in a real-world version would depend on how many repeaters
a power company used."

Nothing like trying to use something intended for one use for some other
unrelated use. Why would any fool want to put high-speed transmission data
on an unshielded single wire feedline that travels for miles in a hostile
communications environment? One would think the idea wouldn't get off the
professor's desk. Maybe PhD's should harvest rice six months each year to
find out what the real world is all about?

What does it have to do with it? There are many SSB stations I would have to
listen to with loads of interference if I didn't have them.
Some I wouldn't be able to continue listening to at all.

Lucky

Don't know why you're getting defensive.

I didn't imply a conspiracy, or that profit was a bad thing. I mentioned Lowe made a similar decision.

If they couldn't make a profit, they'd have little incentive to make the radio.

My guess is they expected leaving the parts out of the radios for people who didn't care about the port would do more for the bottom line than selling the accessory for those who wanted the capability.

First, my thanks to Laura for asking a question that guys probably wouldn't ask anymore than we would ask directions if lost. In both cases we seem to be satisfied with wandering around.

Also, once again thanks to Joe for a somewhat complete answer to Laura's question. (I'd love to get Joe over here for a long conversation and just pick his brain for a few hours.) But I would like an even more complete answer. Joe and others seem to feel that you can't just lay a wire on your roof and hold it down somehow and still get better reception that you get with the whip indoors. I'm thinking you aren't satisfied with that answer. If you are, I apologize. I'm not satisfied.

I've heard all kinds of people suggest that you can tack a wire to the fence in your backyard and run a wire to your radio and get decent reception or maybe just better reception. "Better reception than what?", you ask? Good point. I guess I don't recall what the alternative was for sure, but I think it was one of us neophytes trying to get away from the whip again. And I haven't heard it just once; I've heard it many times. Did they not actually mean tack it to the fence? Did they really mean use stand-offs and attach it to the fence. I don't think so, because most asking the question were trying to find a way to hide the antenna from the neighbors or the homeowners association.

I've heard others say they live out in the boonies and have laid 1000 feet of long wire on the ground and obtained terrific reception. (I suppose a thousand feet of any kind of wire is bound to receive something!) This seems very much like laying a wire on the roof of one's house with one major difference: out there in the boonies you would have less interference from the junk most of us have in our homes and those next door to us.

Finally, I assume Laura was talking about laying insulated wire on her roof to improve reception. I'm not sure that bare wire would be a no-no (heck, I'm new to this stuff, too), but I've heard the type of wire doesn't really make that much difference (within reason). I suspect this large roll of #14 solid, insulated wire used to wire homes will work just as well as most and better than some.

Then we have that connection thing. The guys who have been into this hobby for a while assume we all know how and where to connect the downlead to the main antenna wire. My head spins with all of the detail, but its kind of fun searching for answers .... especially when you have a bunch of people who you can drag them out of.

All I'm sure of is that the Wellbrook is in my future.

Harlan

And Kenwood was another maker that sold the 232 interface separately
for it's radios.

I suspect that the decision by all of the radio companies to market it
as an option was mostly an atttempt to keep the initial price as low
and competitive as possible. I think the companies understood that
only a small group of enthusiasts wanted features like a 232 interface,
voice synthesizer or 500hz filter. Adding one or more to all radios
could have pushed the price beyond the competition. While profit is
certainly their motive in selling radios, I don't think they separated
the 232 adaptor solely as a way to eke out more markup.

Good question, given that the vast majority of my listening is on SSB, including some SWBC stations with QRM on one sideband - BBC on 12095 for example - what do PBT and IF Shift have to do with SSB performance? If they were important surely they would be standard items in professional receivers?

I agree that they can be useful on occasion for getting rid of some QRM, but they are hardly a requirement for good SSB performance.

I have, among others, the HF-150, R-5000, Plessey PR155, Eddystone EC-958: none have PBT and only the R-5000 has shift which is very seldom needed, the filters do most of the work. My HAM rigs have both and also are seldom required.

Regards
Dave

I would be tempted to think that there is something seriously wrong if
you have to use PBT and shift to be able to listen to SSB stations.
Either your receiver or local noise environment need to be looked at.

The only other option I see is that you are operating your receiver
incorrectly. I have an "older" acquaintance who has a similar problem
but insists on listening to SSB with a 16kHz filter - he needs all the
help he can get since he refuses to use the correct filter(s).

Here's three low visibility antennas I've tried.

1. Find the biggest outward facing window and run wire around the perimeter. I used tiny cupholders with suction cups on the bottom at each corner of the window.
2. Run a wire around the baseboards of your listening room and any other that you can get away with and tuck it down into the carpet.
3. A reasonable outdoor antenna can be made from magnet wire. It is so thin that it's all but invisible. If you can toss the end over a tree, so much the better, otherwise dangle it down the side of the building with something to hold it in place.

Number 2 was the best performer.

That's funny...I was debating the other day whether I should delete my
library of QBasic programs or not. I think I'll keep it, actually.

BBSs and Telnet are/were near and dear to my heart - those really
were the days. Remember Fidonet? (getting all choked up now, heh heh)

The "cyberworld" (as it existed 15 years ago) was a friendlier, text-based
world.

Source record: 5760

Dear Harlan and Laura,

You are correct in stating that we "old-timers" tend to assume that newcomers to the hobby know all the "basics" we know. That, as you state, is not the case.

Antennas are the MOST important item in your radio arsenal yet are the LEAST quantifiable; in other words, a great antenna at one location may turn out to be a "dud" at another. Even moving an antenna a FEW FEET(!) in either direction may make a great difference in reception.

How are you going to accomplish what you want? As I stated above, only "trial-and-error" will do. That, as you can surmise, can be a real pain in the neck (sometimes literally!).

All anyone can do is research the various antennas which might be suitable for your particular location and requirements and then try one or more. Obviously, if one has restrictive covenants, an outdoor long-wire antenna is "out" unless it can be camouflaged (and then, often, its performance is compromised), so one has to make allowances for his/her particular situation.

With an abundance of local electrical noise, it is important to find the source and to see if somehow it can be overcome. Recently in my location we had two defective streetlights. One, a low-pressure sodium, was fixed by the electic company rather rapidly. The other, a mercury arc-vapor one, was not fixed for several months; I had to call the town hall and the electric company quite a number of times before this light was fixed. Having those defective lights was adding "insult to injury" at my location already awash in electrical noise. (Too bad there isn't an electrical noise reception hobby. Just imagine being able to tell your friends "I picked up a high tension line from 10 miles away!" Boy! What fun!)

To get to your original query, insulated wire makes a good outdoor antenna. It should be run straight; the longer and higher the better in general. (But beware: a great long wire, suitable for a good table-top short wave radio, may badly overload a portable. Your antenna MUST be "matched" to the particular receiver with which it will be used. Common sense prevails here.) The wire should terminate at both ends to ceramic (or similar) stand-off insulators. (Remember to affix those insulators to connections with strain-relief.) The lead-in wire should be connected at one end and that wire run to your receiver. The simplest lead-in is just another piece of insulated wire attached to the + terminal of your wire unput (on a table radio) or affixed to a 3.5 mm plug (for a portable). If you are using a table radio, you can

experiment with a ground. Sometimes it helps, sometimes not. The best ground is heavy copper wire attached to a metal rod driven about 6 feet into the ground (at least in my experience). A portable radio does not need a ground. IN ALL CASES, when using an outdoor antenna, you MUST have lightning protection. (All radio shops can help you along those lines.)

There are, of course, many other types of antennas: dipoles, Beverages, vertical, tower, etc. Your call.

The best thing to do (and here I shall brook no argument) is to buy several of the better books on antennas, such as Joe Carr's book (available from Universal), PASSPORT's 'White Paper" about antennas, and some others, and read them several times. The more you read, the more you will know and understand. Does all that take time? Yes it does and one could argue, "I'd rather be listening than reading and learning all that stuff!" But unless you are willing to learn and then experiment with antennas based on your knowledge, no matter what receiver you own, you will never be able to use it to full advantage.

Once you have done all this (and it takes time, effort, and experience, of course, for which there is no substitute), then you too will be an "old-timer" like me!

Best,

Joe

They're just the features you've learned to use to compensate for problems you've faced.

On my 7030+ I've installed exceptionally good filters with very steep skirts, so I rarely need to tweak the PBT to eliminate interference.

But the real reason I added those filters was the ones that came with the radio were too wide or too narrow for me. The fact better filters simplified using the radio was just a bonus.

On the Harris, I just use the sync detector and coherent AGC and it sounds beautiful.

The HF-150 is one of those radios hardly anyone complains about - I never bought one, but I spent a while looking for the Europa version before I ended up with my 7030+. I wanted as much performance as I could get in the smallest possible package, and it had to be reasonably practical to run on rechargeable batteries.

I'm very happy with the decision I made, but if I'd found a HF-150 Europa first, I probably would have gone for it. (and then I'd probably have tried the 7030 anyway)

Hello Greg.

Check back for some of my previous posts as well as some others in the archives.

I live in a small townhouse with covenants similar to yours. In addition, I am "plagued" with local electrical noise.

My two best solutions for a table-top radio similar to yours are:

1) The AOR WL500 Window Loop Antenna (an excellent antenna) and,

2) The Wellbrook ALA 330S Active Loop Antenna (the very best, peformance without parallel)

My (and other's) previous posts, as well as the new PASSPORT TO WORLD BAND RADIO and the new WRTH, will give you all the details.

Best,

Joe

*KAIJ Dallas about to break away from all-Gene-Scott-all-the-time;
http://www.kaij.org says they want to add Christian programming in
Spanish especially to Cuba; and want to replace star on Cuban flag
with Christian cross; 5755 night, 13815 daytime, but latter no good
for Cuba, 5 kHz from Radio Marti and all that jamming

>From http://www.worldofradio.com/wor1257.html
[...]
*One reason for KAIJ Dallas planning to broadcast something besides Dr
Gene Scott: reportedly has terminal cancer after puffing cigars; but
if his heirs want to continue the University Network ministry, they
could run his tapes 24 hours for 7 years without repeating

Wow, the population of Malvern, England must really have been cooked over the years with the assorted high power RADAR systems operated at the Royal Radar Establishment and the other stuff at the Telecommunications Research Establishment (The names and roles have changed several times over the years).

ISTR that the radiation was intense enough that during the coronation of Elizabeth II a fascinating and artistic? display of gas discharge tubes was erected and powered solely by the incident radiation. Certainly during my time there a neon or fluorescent bulb did not require wires to work.

Also the folks around Cutler, Maine with the 2+ Megawatt VLF transmitter which has been running for several generations must be showing some signs, as should the folks around Jim Creek etc. etc.

There are multiple places with transmitters on these frequencies running many, many times the power of any portable device - they have dedicated power lines or huge dedicated generators which obviously far exceed the capability of any transportable device.

But, I think I'll put an aluminum shield on my front lawn to protect me from that long range radar I can see across the field, trouble is there is a high power VHF TV transmitter beyond my back yard - maybe I'll dig a hole and line it with copper? They both use back-up generators which would require a very large truck to move and consume large quantities of fuel so I suspect they out-perform any portable 'bubble'.

Dave

>
>Now that is weird. I've also noticed that the 9525 frequency usually
>used from 0200-0400 is going off at 0300. Apparently they've shifted its
>schedule up one hour.

No, I daily check these. 9525 is from 01:00 until 04:00 but fades out here about 02:15. 6135 starts at 04:00 to 06:00 but is fading out about 05:30.

>I haven't checked to see if 6135 is now signing on
>at 0300. Passport says that 12095 at 1500 is to Europe from "various
>locations", probably Rampisham at this hour.

Lets grep that file (that I'd forgotten about) again.
12095 0700 1700 smtwtfs BBC Woofferton 250 140 English EUR
12095 1500 1600 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1600 1700 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1700 1800 smtwtfs BBC Woofferton 250 140 English EUR
12095 1700 1900 smtwtfs BBC Woofferton 250 78 English RUSS
12095 1900 2100 smtwtfs BBC Ascension 250 114 English S AF
12095 2100 2400 smtwtfs BBC Ascension 250 245 English S AM

I used my "world clock" program to get a greyline map and found that it's probably East Africa for the non-English stations, at sunrise. That and West Central Europe are the only populated areas. The sunset greyline is really grim for Western North America. India, Easter Island and Tierra Del Fuego.

> Hi Lucky,

I build most of my receivers, including the crystal filters- the Lowe being the exception. None have PBT but the do have excellent 8 to 12 pole crystal filters with exceptional group delay- I have never missed PBT on them or the Lowe. My IC756 PRO has tiwn PBT and although it is occasionally a help, I have yet to find a station that I can copy on the PRO that I cannot copy on the Lowe or the homebrews.
Bottom line- I'd take better crystal filters over PBT any day.

Yes, he's in read bad shape. I bet he won't last more than a couple of weeks.

If Doc's affiliates in the U.S. drop him, he still has his transmitter in Anguilla that can broadcast him 24/7. Heck, on my radios, that transmission is much stronger on 6090 than the one from KAIJ, and I'm only about 450 miles away from Dallas.

HJS,
.
The process is called Cost Benefit Analysis (CBA).
.
At the time that these Receivers were made the number
of Buyers that would have been motivated to buy a specific
Receiver just because it had this specific feature 'built-in'
was small. The reduced Cost of the Receiver (Lower Price
Point) by not including this feature and offering it as an
Option for the few that would want it; against the total
number of sales an overall profitability of the product.
.
At least back then; Market Analysis must of identified that
an RS-232 Adapter/Interface was not a Selling Feature that
would motivate most sellers to "Buy" a specific Receiver.
Yes some would... but most would not.
.
Look at a current sample of new Table Top Receivers that
have been offered for sale within the last five years.
How many have a built-in Computer-Interface; and how many
have not. In todays market it may be a Selling Point for
many buyers; and the cost of having one built-in may now
add little to the overall cost of the Receiver at it's
current Price Point.
.
Now consider a sample of new 'portable' AM/FM Shortwave Radios
that have been offered for sale within the last five years.
How many have a built-in Computer-Interface; and how many more
have not. In todays market it still is NOT a Selling Point
for most 'portable' AM/FM Shortwave Radio "Buyers"; and the
cost of having one built-in does Add-to-the-Overall-Cost of
the 'portable' AM/FM Shortwave and drives up it's current
Price Point.
.
At any given time in a Market there is a Balance between:
- The Manufacturing Cost of the Product
+ The Price Point of the Product within the Market
= The Value of the Product as 'perceived' by the Customer
.
jm2cw ~ RHF
.
.

What a load of crap, anyone with even a little radio knowledge will read this as pure nonsense. When did whales start hearing radio waves? And what the hell is the mix of VLF "Ver Low Frequency" ULF "Ultra Low Frequencies" and UHF "Ultra High Frequencies" got to do with Microwaves "Super High Frequencies"? I live a few miles from a 50,000 watt MF "Medium Frequencies" station at 700 Khz, theres several Mega Watt level Television stations within a few dozen miles, not to mention countless FM Broadcasts on every frequency from 30 to 1300 mhz everywhere. Our whales arnt hearing any of this ;-)

Source record: 5783

The LEM206 DXpedition report from Arctic Finland can now be found at
http://www.dxing.info/dxpeditions/lem206rep.dx and the log at
http://www.dxing.info/dxpeditions/lem206log.dx

For us, pretty good reception of US AM stations throughout the entire
week was the highlight. Those of you who are interested only in
shortwave can still find one interesting logging, check out 3815 kHz
under you-should-know-which continent...

We have only begun to review the huge number of recordings, so I expect
the log to grow by at least 50% over the coming weeks and months.
However, I wanted to give you a preliminary listing as soon as
possible. I will also be adding some more slogans and sound files later
on.

73s
Mika

Whales have been beaching themselves since time immemorial for reasons unknown,
fool!

Do a bit of research before you shoot your 'tard boy mouth off.

1892. Re: Wellbrook ALA330S received today First impressions

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 21:47:52 UTC
From: big boy now <shogun1965@lycos.co.uk>
Message-ID: <ckdKd.1511$n9.1240@fe3.news.blueyonder.co.uk>
Source record: 5790

My review of the wellbrook ALA 330S loop antenna so far.

first things first i was going to test this antenna mounted in my loft
but the loop would not fit through the loft door opening.

So my first test was carried out as follows.
i stood the antenna in the middle of my room floor.
i had the 330S connected to an antenna switch so i could flick the switch to
compare the performance between other antennas i have mounted out doors..
when i had the 330S connected up like this just sitting in the middle of my
room floor. my other antennas did perform better signal wise but the
wellbrook was much quieter but the signals were a lot lower.....one thing i
did notice is that why i was useing the wellbrook 330S in this position is i
tuned into a distant signal that i could hear why using the 330S then i
flicked the antenna switch between my two other out door antennas and i
could only hear the signal using the 330S as the noise was a lot less....
this is as far as i have progressed so far.....
my next test will be to locate the antenna on a fence post in my back
garden..
then when i get time i will be mounting it about 50+ feet high...

as for my circumstances my farther in laws cancer treatment well.
he was admitted to Hospital on Monday 24th and was expecting to have his
operation first thing Tuesday. his operation was going to take 12+ hours ..
well on the Tuesday the doctors got my farther in-law all ready for his
operation they went as far as wheeling him down to the operating room they
had injected him with strong pain killers and relaxants then just as they
were to wheel him into the operating room the operation was cancelled due to
the intensive care bed had been taken and he was sent home later that day
and he now has to wait for another couple of weeks for his operation and it
could be cancelled again. how fucking cruel is that this country is going
to the wall the health service is totally shit. one day i am going to get
out of this god forbidden country......

As soon as i have time i will test the Wellbrook 330S mounted out doors.....

all in all the antenna seemed to perform better than my out door antennas
but the signal was low but then again it was only sitting on the floor....

1894. Re: Is this a good antenna?

Newsgroup: rec.radio.shortwave
Date: 2005-01-27 21:50:48 UTC
From: hjsjms@cs.com
Message-ID: <1106862648.252806.297840@z14g2000cwz.googlegroups.com>
Source record: 5793

Kind of a mixed bag from the reviews I've read. May be a passable to good performer on higher bands, but poor on the lower ones and I remember reading some complains about it being noisy. Best to do a google groups search and read away for a few hours.

I've seen several new antennas over the years, and while they will catch signals, they don't turn out to be the one antenna-that-works-all-bands equally well as is usually claimed by the maker.

Reference Materials Wanted

I am interested in pirate radio, scanning, LPFM,
clandestine radio, free radio, community radio,
shortwave listening, utility monitoring, etc.

I would like to find books or CDROMs dealing with
these topics.

For example, used Monitoring Times CD's or WUN, etc.

Thanks.

The uP's (microprossors) on many devices can make a clicking sound on a
radio. I recently discovered that one of my battery chargers does this.
It wouldn't hurt to have the TV checked out though.

"Mark S. Holden" <mark@bmas.org> wrote in
news:41F900E5.C51945AB@bmas.org:

I like the Yaesu FRG-100, or at least the possibility of a selection of equipment (Palstar etc.). It seems that in the modern world, people are selecting fewer items, since they read this or that about a specific brand of equipment, and the focusing of sales is going to result in a limited variety of designs available.

By the thread discussing the omission of the RS232 Jack on the FRG-100, without demonstrating that other radios, in similar price categories, designed and marketed in a similar era, were also lacking this Jack, seemed to impugn the Yaesu itself. (As I originally said, Yaesu has dropped the radio from their web page, it has been discontinued, I am sure that the Icom R-75 has taken its place in terms of Table Top Radios).

People have a dwindling interest in SWL. After all you can get anything you want off of the internet and cable (or Satellite). But can you really? The U.S. Government has ordered an Iranian channel to be deleted from a satellite providing coverage to the U.S., citing "Intellectual Terrorism". So much for the convenience of the "digital age", the satellites are beyond our control, someone else controls the switches.

http://www.counterpunch.org/moses12212004.html
http://www.asiamedia.ucla.edu/article.asp?parentid=18855

Shortwave offers the ability to directly glean information from a variety of sources, thereby giving you the possibility of making an "educated decision". I would truly mourn its passing, as I rue the passing of the FRG-100 as a current offering.

It was around $200.00 with the shipping to & from....
Not bad considering the worth of the radio, and a three hour pull down and repair....alignment, 24 hour smoke test and another realignment.
Getting parts is the problem, he probably buys units that are gone and some that play but are cosmetically poor and takes off the good mechanical parts...but the parts supply barrel has to be playing out!!

While browsing on the internet, I found the following site:

http://www.offshore-radio.de/fleet/

Very interesting, photos of many of the ships, history, stories of the escapades of the U.S. FCC to confiscate ships purportedly in international waters.

"A survey of all Radio Ships and Artifical Structures"

Soliloquy.

How large is the property in Anguilla? I do remember him having a hard time trying to get the government there to let him brodcast, dont know all the details of that, but it did take him awhile.

It's very mysterious because, I did once get Coast to Coast (with Art)
on shortwave. This happend a few years ago. I do not remember the FRQ,
date or time. I did remember that the signal was fading away.

LF,
.
An "On-the-Roof" Shortwave Antenna may be a good idea;
and an "In-the-Attic" Shortwave Antenna can also work well.
.
But when you have RFI / EMF Man Made Noise Problems
usually one sure way of reducing them is to use a Loop
Antenna to Null-Out the Noise Source or Peak the Signal
of the Radio Station you want to listen to.
.
An In-Door Loop Antenna is about as easy to build and
takes about the same amount of time money and effort
as an Out-Side {External} Shortwave Antenna.
.
READ - Four 'different' "In-Door" Loop Antennas Ideas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1933
.
Specifically take-a-look-at the : In-Door "On-the-Wall"
Loop Antenna for 'portable' AM/FM Shortwave Radios that
use a 1/8" (3.5mm) Jack for the External Antenna like your
Roberts R861 Radio.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1845
.
This Antenna can be Mounted with Two Cup-Hooks
and a 8oz Fish Weight to position the Bottom-Center.
.
Try it on one wall and then the adjacent side wall (90*)

I was going to try a variation of that, by putting the matching transformer
at the long wire junction to the coax. We had a few warm days here, though
and the it's a mudhole back there, so I wait..

> I seem to recall some effects of capacitance coming into play when used as
> you've described, and what happens there is that the coaxial cable is simply
> acting as a very long capacitor which might actually act as a block to some
> frequencies.

Possibly. If I ever get energetic I'll connect a signal generator to the far
end and see what comes out on the radio side. I have an old scope here that
will go to 30Mhz, so it should be fine. Things don't seem too bad now, but I
have no way of knowing if they can get better until I try.

> I'll have to look through the literature when I get a chance.
> Depending upon how you have it hooked up you might not have noticed any
> difference with a matching transformer if it was not attached properly.

Very true. I have no way of knowing to what degree the impedance
characteristics of the wire have been changed (if at all) by the single
point ground cable sheathing. That signal input test is starting to sound
better all the time.

I bought a radio described as in very good condition. when I got it, I would rate it fair to good. when I wrote the seller, here was his first response:

> I am sorry to hear that but this item is being sold
> as-is. This was listed
> very clearly. There is nothing we can do for you on this item.
>
> Sorry I couldn't be more helpful.

no where did he address that he was not giving the truth in the auction.

when I told him I would have to leave a negative for him, here was his response:

>Expect a negative in return for a buyer who doesn't read
>auctions and is quick to leave negative feedback. Hope
>your perfect record is worth it.

now where does "as-is" mean you can LIE about the item you are selling ? How was I quick, I wrote him and he told me tough luck !

this is an area where the eBay system is seriously flawed. How can I give a negative without getting one I don't deserve. maybe a class action alw suit is in order here !

Please give link to the auction. I'd like to look at this.

My first question would be whether your idea of very good condition is
the same as the sellers. Also, were there pictures you were able to
look at? Believe me, I sympathize with you but if the auction said "as
is", you really have no recourse and I don't think the bad feedback is
worth what you *won't* gain from it. Sometimes I hate the "system"......

Best,
-Al

sadly, 'as-is' pretty much does allow him say anything about it he likes --
particularly as there is no official meaning of 'very good condition'.

He was in very good condition -- for a dead guy.... (for example)

I've been noticing that 5975 has been slipping into noise gradually
during the 0300 hour. The World Today starts out audible but by 0315
it's mush.

Hi all: I just received this form the "contact" at EtonCorp.com
requesting a release date for the Grundig 900:

- -

Dear Boyd,

End of this quarter or beginning of next it will be
released to major dealerships.

Kindly visit our website at www.etoncorp.com .
Thank you for interest in our radios.

Best regards
Arvind

It's much worse than I had imagined. Is there a clear explanation on how this could have happened yet? I found the "uncharted mountain" story hard to believe.

This fellow is local to me. I love this store! I live in the Twin Cities metro area, and Great Northern Antiques is really quite a fun place to visit... Allan fixes and sells all sorts of vintage radios as well as parts and manuals. He's sort of a Zenith repair specialist (which is good for you!). The website doesn't support online ordering, but there is a catalog on it and you can always call them and let them know what you're looking for. They are friendly, helpful and very knowledgeable about old radios.

Great Northern is a fun place to visit if you're ever in the Twin Cities. It's super close to the Twin Cities International Airport and the Mall of America.

news:X-mdnYz7cOwiBGTcRVn-sA@comcast.com:

Where's the link to the auction? I'd like to see exactly how it was
described, any pictures, how much it cost, etc.

I have purchased various things from E-Bay, all but 1 went well. The 1
that went poorly was a Bearcat Scanner from the bygone days, programmable
though. The auction was listed "as is", but went on to state that the
picture shown was the radio actually scanning. When I received it, I
realized that it didn't work, giving an error message in the display.
When I re-examined the auction photo, and looked very closely, it showed
the same error on the display that I had. There was no way that it was
working when the photo was taken.

Although I may have gotten satisifaction by negotiating a return of the
radio, I paid so little for it that it would have cost me more to return
than I paid for it.

I was an E-Bay Sap. Though I paid for the unit in a very timely manner,
the auctioner wouldn't post any comments for me until I posted comments
for him. I was therefore unable to post the negative comment that I
wanted to. Here I was with 20 purchases, and he with 1500 sales. One
negative comment for me would have done more damage than one for him.

Regards.

Soliloquy.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

does anyone know of a way to increase sensitivity especially below 5 mhz on these radios..i notice sensitivity is low at 3 mhz but improves, the higher one tunes..at 29 mhz it's actually pretty good.

i suspect some type of filtering was added to reduce overload on low freqs???

suggestions r invited.

Yes, I saw that the time and freq listed for Sackville at DRM.org matched.
This is the first time I've looked at the site for several months and found
that there are a lot more transmissions from just a few experimental
broadcasts listed earlier. It will be interesting to see if this becomes
really popular. Unfortunatly, the reception setup is rather involved for
most listeners. I don't think my old laptop is up to snuff for this- also,
the software is not free (yet). I may try it, but I just don't care much for
having to depend on a computer to help me listen to the radio- too much
fuss.
I suppose there are a lot of other SWL's that feel the same way. It would
be nice if I could just make up a little circuit board to hide behind the
radio, and then flip a "DRM" switch when I encounter a transmission. I'm
sure this subject has beat around here plenty anyway!

@f14g2000cwb.googlegroups.com:

I have an outdoor wire antenna, about 75 feet in length, connected to one
radio. The other radio is used with a strictly indoor antenna. This
consists of an 18 guage insulated wire (the wire is available in white from
Radio Shack)that goes once around the room at ceiling height. We live in a
wood frame house and the indoor antenna is on the second floor.
Surprisingly, the reception is quite good, I am usually able to receive
most broadcasts on either radio.

I guess the condo situation modifies your situation somewhat. If the
building is substantial (concrete and steel), access to the window/windows
is your best bet. Try to avoid running wire antennas close to other metal,
such as suspended ceilings or metal frame windows.

I really like the FGR-100B, have fun with it.

Hello,

I am selling an Icom IC-R71A shortwave radio - excellent condition, rarely used, owned by ex-husband. Comes with upgraded Kiwa filters and infrared remote control and also has speech processor mod. I do not know the values or specifics of what has been actually done to the radio but I do know it is a top-notch receiver. Has PSB/notch filter and some kind of audio mod done on it as well to improve sound. All lights on panel are very bright and clear and radio is not scratched or nicked at all and looks new. Have original owner and service manuals (no original box tho). Radio has been very well taken care and is as close to mint condition as there is and needs a good home:) Asking $450 + shipping from Clearwater, FL 33764

You have to ask questions, I haven't been burned yet. The only thing I
have ever bought that didn't work perfectly was the Hammarlund HQ-100 I
bought. A wire broke off during shipping, and it did nothing but buzz.
The thing was so heavily modded I had no clue where it went, with 3
added tubes and no schematic, I wasn't looking forward to having to
screw with it. Luckily, I found the end of the broken wire, and got it
going.

I always ask, "Is there anything wrong with it?" So far, the answers
have always been "No". ANd they were telling the truth.

The only problems I had selling something was when a buyer tried to claim an expensive receiver I sold him wasn't working right. He wanted to keep it, with a partial refund, of course. I had him send it back and I refunded his money. The radio worked perfectly for nearly a month straight, and then I put it up for auction again, and got a much lower price for it, but the buyer was very happy, and he should have been, as it was in mint condition. He paid about the same as the first guy wanted to pay. That's how it goes..

Read through the ebay website rules about leaving feedback. Find out the length of time you have to leave feedback; this used to be 90 days 3 years ago, which is why I'm saying you should look it up.

Calculate the date 90 days (or whenever) from the date the auction ended. Circle the date on your calendar. Remember the time the auction ended. Simply leave negative feedback less than an hour before the feedback expiration period.

I know this might sound kinda dumb, but it is the best shot you have at leaving a well-deserved negative feedback without receiving a retaliation feedback in return.

Hope this helps,
tony

Depending on the details, you may be able to file a complaint of misrepresentation, and a claim for reimbursement through ebay.

I'd do this before filing a neg.

If they agree the listing wasn't honest, they're likely to offer him the chance to make good or get naru'd if they have to pay the claim. That's likely to mean more to him than a neg.

Of course he may still neg you.

I made a claim a few years ago when a seller took the money and ran.
IIRC, they had a $25 deductible, and a $200 limit (really $175 after the
deductible.) You need to follow up on things as they have narrow time
windows where you need to take action to pursue the claim.

Dear Ed,

When you spend $10 on a short wave radio you cannot expect anything but a $10 radio. You know what you'll get. It will work. It will receive MW, FM, and SW signals as it's designed to do. I have one and I've even had the All India Radio and a few other more-or-less "difficult" stations on it. I bought it just to see what you get for $10. It's well-worth $10 as long as you don't expect a $50 radio. (I rarely use mine any more. Frankly, it's just a toy.)

If I were to make a recommendation for you, and assuming that $80 is not too much for you, I should recommend the Sony ICF-SW35, a very under-rated and very good dual-conversion receiver which has extremely good quality of construction. This radio might serve you much better (I have two of them), but, if short wave is only worth $10 to you, then go with the B&H.

Best,

Joe

I think the ALA-330S is a wonderful antenna. It didn't work well for me indoors due to noise, but now that it's mounted outdoors it's doing extremely well.

If you want to purchase one, you can contact the Shortwave Shop and order one with a credit card. Visit their website for contact information: http://www.shortwave.co.uk

1970. Re: Wellbrook ALA330S received today First impressions

Newsgroup: rec.radio.shortwave
Date: 2005-01-28 05:03:07 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1106888587.028159.177670@f14g2000cwb.googlegroups.com>
Source record: 5970

Dear John,

Compared to what you, your father-in-law, and your family are going through, questions about the Wellbrook antenna seem insignficant. I hope you and yours find the strength to pull through this. (The "dedicated" health-care "professionals" in ALL countries offer poor care nowadays. It seems to me [in the USA] that the only "dedication" many [most?] of these people seem to have is to themselves.)

So I'll just make one quick comment; you will be able to observe this for yourself (and, actually, you already have). Many antennas will cause the S-meter to show a stronger signal than the Wellbrook, yet, especially in the summer, you will be able to hear the signal far better via the Wellbrook than most other antennas. This is because the other antennas boost the noise along with the signal. The Wellbrook attenuates electrical and atmospheric noise. Its gain is not as great as many other antennas, but its signal-to-noise ratio (which is all in which you are interested) is far better than any other antenna I have personally tried or experienced. In short, it just doesn't matter what the S-meter reads. The bottom line is: "can you hear the signal with good intelligibility?"

I (and I know all the rest of the members of this group) sincerely wish your father-in-law a speedy and complete recovery and for you and your family to get through this most terrible time.

Best,

Joe

I've been lucky with Ebay so far, but your experience is why I'm still
very cautious about using them. I find that calling the seller and
talking to him is one way to get a pretty good idea about whether he can
be trusted. Most people don't lie well on the phone when they have to
answer questions quickly. Hope you get some satifaction with Ebay.

Around 40 frequency managers of 18 shortwave broadcasters have converged in Kuala Lumpur since Monday for an Asia-Pacific Broadcasting Union (ABU) conference on reducing interference to shortwave services. The first two days of the 2005 Coordination Conference of the ABU Shortwave Coordination Group, ABU-HFC, saw significant success achieved towards this end. The conference hopes to address frequency channel requirements for more than 6,700 daily shortwave broadcasts by using coordination methods and complex software tools.

The recent tsunami calamity has underscored the critical importance of shortwave radio in bringing disaster warnings and new of relief efforts to the affected population, and the need to keep it free from interference. The ABU-HFC Steering Committee also met on Monday and made some crucial decisions on the functions of the group.

An article in the Cincinnati Enquirer says that the former VOA Voice of America Bethany Relay Station is in urgent need of repair, and to help save the building Ohio lawmakers are considering a $275,000 grant. That money would be combined with locally generated dollars to match a requested $625,000 "Save America's Treasures" federal grant. The total $1.2 million would be spent on electrical, heating and structural work on the building, which houses the Gray History of Wireless Museum, the Media Heritage broadcasting collection and township park offices.

Hopefully this marks the resumption of MediaScan. I had to stop for several reasons. First of all, I was away on vacation for 6 weeks, and it was hard to get going again. Then, I got put in charge of Radio Sweden's transition to a new web content management system, and was told to put MediaScan aside.

Later, when it turned out that I did have some spare time in the new assignment, the English Service expressed interested in continuing MediaScan. But after a computer crash, I couldn't get my Radio Userland blog software to work right. I've now switched to another system, Blogdrive. It lacks many of the features of Radio Userland, but does allow me to post from anywhere. I could only get Userland to work on a computer and home, and not behind the firewall at Sveriges Radio.

I'm note sure how often I will publish, or whether I will publish a lengthy bulletin or blogs. The latter is easier, but others (especially Andy at Radio Netherlands) do that well. I am gratifife that a few people have asked if MediaScan is still alive. That indicates some interest, so I will try to get something here on a regular basis. Besides, it's a great URL and deserves content!

You made our point. Manufacturers like to keep the price down by
eliminating certain features like a 232 interface, *perhaps* with the
intention of selling it as an accessory. Drake did the same with the R8
and it's VHF module.

It may be more a matter of the whip sensitivity which is not very good
with these two models compared to some other portables. You can find a
lot of mod's for them on Yahoo and other sites. I did a whip mod' that
was particularly succesful. It involves adding an impedance matching
balun transformer between the whip and it's circuit input.

It's a very good idea. You can save yourself a lot of hassle by
'snooping' the area first before erecting an antenna. It's one of the
best ways to find radio interference.

It's considered a good "beach radio" - you can hear strong stations
and have fun. If it gets stolen or if it gets damaged - well, it's
just a $10 radio.

If you're expecting to do serious DX and hear weak domestic stations
from Latin America, Africa or the Pacific whilst you're in North
America, you'll be disappointed.

It's probably also a good radio for people in third world countries
who want to bypass domestic authorized media but who can't afford
anything fancy. I've heard of U.S. embassies giving out these or
similar radios - although if batteries are an issue, the wind ups may
be better in the long run.

BURNIA3,
.
The RadioShack DX-398 (Sangean ATS-909) has both a
Whip Antenna and External Antenna Jack:
.
The RadioShack DX-398 / Sangean ATS-909 is noted for
being some what deaf off of it's built-in Whip Antenna.
.
Generally the RadioShack DX-398 has a reputation for being
better using an External Antenna connected via the 1/8" Jack
on the Side of the Radio. This is a Stereo Jack and you should
use a Stereo 1/8" Plug with the End-Tip connected to the External
Antenna Wire and the Rear-Barrel connected to the Ground Wire.
NOTE: The Center-Middle-Barrel of the 1/8" Stereo Plug is NOT Used.
.

These fine people disagree.

> http://www.mods.dk/mod/radio_shack/dx-398antjack.gif

==========

The radio accepts a 1/8" stereo headphone jack for its external antenna.
It's wired a little differently than you think.

The tip goes to the antenna terminal and the sleeve goes to ground, just as
you would expect in this unbalanced antenna input. Shortwave signals are
routed from the external antenna jack when a connector is plugged in.

The ring--the terminal in the middle of the plug--has a special purpose.
When you ground it, medium wave signals are also routed from the external
jack instead of the radio's internal loopstick. This is why some people have
reported poor MW reception when they use regular 1/8" mono patch cables to
connect their antennas.

But for medium wave DXers, this is an opportunity to connect their favorite
antennas to the radio; the lack of a good MW antenna connection has made
some otherwise good radios less than desirable.

If you prefer to use the internal loopstick for MW, simply leave the ring of
the plug unconnected.

Ingo Truppel has another approach:

An important note to the MW/LW - external antenna. It is not useful to
connect the ring terminal of the antenna plug to ground. Instead of that it
should be connected also to the antenna terminal and parallel via a 1 kOhm

resistor or an inductance (some mH) to ground - that way you get more sensitivity for MW/LW (look at the scheme for that). I use an self made active antenna (150kHz-30MHz tuned) with an output transformer which grounds the antenna for DC. So I only connect the ring of the antenna plug to the antenna terminal.

[I haven't tried this. The antenna I use is also DC grounded, so Ingo's idea should work for me...DM]
How do I disable the internal MW antenna?

Using a 1/8" stereo connector, ground the ring terminal to the sleeve. Or else use a 1/8" mono connector. The FAQ author much prefers the former method as this can be controlled by a SPST switch to disable and reenable the internal antenna, thus saving the antenna jack inside the radio from wear.

This is accurate, but they fail to mention that "this quarter or beginning of next"
refers to "quarter century".

I used to have an outdoor longwire about same length as yours - until an ice
storm. Reality is that the Slinky antenna indoors works just as well - and is
a Slinky endloading about 22' of wire.

I bid,
I won,
I paid,
I never received product,
Two weeks later,
I sent email, where is my radio?
He email back to me, what radio you never paid,
Days goes by, I sent bank statement showing $$ going to him via PayPal on
day of auction ending?
He says never got it,
I say bullshit?
Week goes by, I see later bank statement where he has sent $$ back to my
account?
I say WTF?
He says never did it?
I say WTF?
I leave - feedback, what a ass!
He leave feedback what a ass!
Both have negative feedback! What a ass!

He sell's same radio for 50 bucks more than I won for? Ok now I get it!

I monitored his auctions for a while and emailed bidders to look a a site
where I had ALL documentation including bank statements and all
messages back and forth and said "Do you want to send $$ to this guy!".

BOTTOM LINE -sorry it took this long
To me wife is better looking that Marilyn Monroe, but my friends think she
looks like porky pig!

Third Columnist Implicated with Payola Charges

By E&P Staff

Published: January 27, 2005 11:00 PM ET

NEW YORK Michael McManus, whose syndicated column, "Ethics & Religion," appears in 50 newspapers, was hired as a subcontractor by the Department of Health and Human Services to promote an administration marriage initiative, according to an article posted yesterday by Salon.com, the online magazine.

Senior writer Eric Boehlert wrote that Salon had confirmed that McManus ï¿½championed the plan in his columns without disclosing to readers he was being paid to help it succeed.ï¿½

This report emerged one day after President Bush ordered his Cabinet secretaries to stop hiring commentators to help promote administration initiatives, after revelations surrounding commentators Armstrong Williams and Maggie Gallagher.

According to Salon, Dr. Wade Horn, assistant secretary for children and families at HHS, had responded to the latest report by announcing that HHS would institute a new policy that forbids the agency from hiring any outside expert or consultant who has any working affiliation with the media. "I needed to draw this bright line," Horn told Salon. "The policy is being implemented and we're moving forward."

McManus could not be reached for comment.

Horn told Salon that McManus was paid approximately $10,000 for his work as a subcontractor to the Lewin Group, which was hired by HHS to implement the Community Healthy Marriage Initiative. McManus provided training during two-day conferences in Chattanooga, Tenn., and also made presentations at HHS-sponsored conferences.

Horn said he first learned about the payment on Thursday.

ï¿½In the wake of the Gallagher story,ï¿½ Boehlert wrote, ï¿½he asked his staff to review all outside contracts and determine if there were any other columnists being paid by HHS. They informed him about McManus. Horn says the review for similar contracts continues.ï¿½

Horn said HHS was not paying Gallagher and McManus to write about Bush administration initiatives but for their expertise as marriage advocates. "We live in a complicated world and people wear many different hats," he told Salon. "People who have expertise might also

be writing columns. The line has become increasingly blurred between who's a member of the media and who is not. Thirty years ago if you were a columnist, then you were a full-time employee of a newspaper. Columnists today are different."

In 1996, McManus co-founded Marriage Savers, which, among other things, asks clergy not to conduct marriage ceremonies unless the couple has had lengthy counseling first.

There is no set date.

Feedback can be left after the 90 day mark - just through a backdoor.
If someone is smart enough, they know how.

2016. OT Cheney wears snowsuit and mittens to solemn service for a million souls

Newsgroup: rec.radio.shortwave
Date: 2005-01-28 15:23:21 UTC
From: David <rickets@knac.com>
Message-ID: <95mkv0t3npuv2rdsoleo6hk2qqd3oadbam@4ax.com>
Source record: 6065

(01-28) 06:18 PST OSWIECIM, Poland (AP) --

Vice President Dick Cheney's utilitarian hooded parka and boots stood out amid the solemn formality of a ceremony commemorating the liberation of Nazi death camps, raising eyebrows among the fashion-conscious.

Cheney replaced the zipped-to-the-neck green parka he sported in Thursday's blowing snow and freezing wind with a more traditional black coat -- red tie and gray scarf showing underneath -- for his tour of Auschwitz on Friday.

Washington Post fashion writer Robin Givhan described Cheney's look at the sober and dignified 60th anniversary service as "the kind of attire one typically wears to operate a snow blower."

"Cheney stood out in a sea of black-coated world leaders because he was wearing an olive drab parka with a fur-trimmed hood," Givhan wrote in Friday's Post, also mocking Cheney's knit ski cap embroidered with the words "Staff 2001" and his brown, lace-up hiking boots. "The vice president looked like an awkward child amid the well-dressed adults," she said.

2017. Renaissance of MW SW radio

Newsgroup: rec.radio.shortwave

Digitalisation will initiate a world-wide renaissance of radio

By Erik Bettermann (specialist panel with the Director General of
Deutsche Welle in the context of Medientage Mï¿½nchen)

"Digital short-wave will revolutionise cross-border broadcasts and
will initiate a world-wide renaissance of radio". This
was the opinion of the Director General of Deutsche Welle, Mr Erik
Bettermann, during a panel discussion at
Mï¿½nchner Medientage. Mr Bettermann, the head of the German
international broadcaster and instigator of the event
was not the only one to present an optimistic prediction of a
"Digital Global Radio" development: The other panel
specialists also emphasised the advantages of digitalisation in the
so-called AM range, i.e. short-, medium- and longwave.
The discussion was chaired by Peter Senger, Director of Distribution
at Deutsche Welle and Chairman of the Digital
Radio Mondiale (DRM) Consortium; and next to Erik Bettermann, BBC
representative Mike Cronk, Dan D'Aversa of
RTL Group and Phil Laven of the European Broadcasting Union (EBU) were
also participating in the debate.
Senger outlined the advantages of digital short-wave as follows: The
world-wide accepted DRM standard provided an
excellent audio-quality comparable to FM. In addition, the search for
frequencies was obsolete, as the station
identification tuned in to the designated frequency and automatically
switched to the best one. In parallel, it allows for
the sending of accompanying programme information such as text
messages.
"On top of everything, digital transmission technology saves a lot of
energy and costs compared to the analogue
one", Senger said. This would open up enormous opportunities,
especially for international broadcasters.
For several years, DW like many other broadcasters has noted that
listeners migrated from short-wave to FM or
other new distribution channels in digital quality, said Bettermann.
Deutsche Welle had to stay abreast of these
changes. "According to test transmissions being operated by Deutsche
Welle, we anticipate large area coverage in
almost FM quality without interference such as jitters, induced
power-noise or fading", the General Director stated. At
the same time, not only stationery indoor reception, but also mobile
reception in cars and with small portable devices
is possible.
Admittedly listeners would need new receivers. As a consequence, the

real challenge for the DRM consortium would
be to achieve successful implementation, said Technical Director of
the EBU, Mr. Philip Laven. The timetable for the
introduction of digital services in the AM bands would in fact be set
by broadcasters, "but the speed of the transition to
digital will be set by consumers", stressed Laven.
Dan Dï¿½Aversa of RTL Group sees the chance to develop pan-European
coverage and that RTL Group would try to
ensure "that low-cost DRM receivers will be on sale in time for
Christmas 2005".
Mike Cronk stated that the BBC had invested heavily in DRM and that
they were now developing "a detailed strategy
for its initial deployment, probably into Europe, in 2005". According
to Cronk, DRM offered the unique combination of
wide area short-wave coverage and FM usability and quality.
As a consequence of using this digital medium, continuous direct
delivery to the audience avoiding "political or other
regulatory obstacles" will be possible.
Bettermann, having also stressed the aspect of the impossibility to
censor short-wave and, focussing on European
implementation, announced that Deutsche Welle would gradually switch
off its analogue short-wave transmissions. A
pre-condition would be the world-wide availability of DRM receivers.

He hasn't won it yet.

If he wins, he'll need to get creative to puff up the description - it's already "mint".

Perhaps he'll go for the wonder/intrigue angle and tell us how he used this very radio to listen to live coverage of Apollo 11, or the assassination attempt on President Reagan. (a major accomplishment when you consider the radio was introduced in 1985)

While most people on Ebay are in my experience fundamentally honest, they all have different ways of describing the same thing. If I say something is in "good" condition my standards may not be the same as yours. That's why it is so important to ask the seller specific questions before bidding...on anything. Did you ask him any questions about the condition of the radio before bidding?

Unless a seller describes something as new with no wear and operating perfectly you have to assume that it is used. While some sellers provide exhaustive descriptions many don't. For your self protection you have to determine that the radio is really in the condition you hope it is.

It isn't so much a horror story as it is a story of 2 people not communicating.

Tell all of those "fashion conscious" gay ass-plonking
rug-munching motherfuckas to go and shit themselves
in THEIR wardrobes.

In case any of you stupid liberal pricks ain't aware of it, VP Dick Cheney
has a HEART CONDITION. Exposure to very cold
air (It was 11° F at yesterday's ceremonies with a
15 MPH wind blowing...) can trigger dangerous
heart palpatations in people with a history of acute CVA's.

This is just another example of the liberal controlled crap
media taking a swype at the USA and it's VP, plain
and simple!! They should all shut the phuck up.

GREG,
.
Build you own Super Size "Wave Magnet" Loop Antenna.
.
One of the simplist construction materials for Wave Magnet
type Basket Weave Coil Forms (Frame) is Foam Core Project
Board that is available at Office Depot/Max Stapples etc.
.
A 30" x 40" sheet can be be made into a 30" Circle
with 15 (Odd Number) One Inch Long and 1/4 Inch Wide
Slots set at 24* every 6.25" around the Circumference
of the Circle.
.
Fourteen Turns of Wire (115 Ft) on this Frame will
provide full coverage of the AM/MW Broadcast Band.
.
Two Turns of Wire (16 Ft) on this Frame will provide
Shortwave Band coverage from 3 MHz to 16 MHz.
.
Three Turns of Wire (24 Ft) on this Frame will provide
Shortwave Band coverage from 2 MHz to 11 MHz.
.
Loop Antenna Calculators :
http://www.ourhousenews.com/loopAnt.php4
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm
.
NOTE - The full 30" x 40" Sheet can be used if you want
to have a Rectangle Shaped Loop Antenna. The Top and
Left-and-Right Sides would have Five Evenly Spaced Slots
with the Bottom having only Four Evenly Spaced Slots.
(5+5+5+4=19)
.
Ten Turns of Wire (116 Ft) on this full Frame will
provide full coverage of the AM/MW Broadcast Band.
.
.
HERE ARE TWO "LOOP ANTENNA" eGROUPS :
.
"Loop Antenna" Forum {eGroup} on YAHOO !
LOOP => http://groups.yahoo.com/group/loopantennas/
- Discussion of loop antennas on all bands including ferrite loops,
air core, all types. All bands SHF, VLF, LF, MF, HF, VHF, UHF, etc.
Shortwave, longwave, receivers, transmitters, all fair game here.
.

"Loop Antenna Information and Design" Forum {eGroup} on YAHOO !
LOOPS => http://groups.yahoo.com/group/gccloopantennadesign/
- Welcome the GCC Loop Antenna Designers and Builders group, this list is everyone who likes to learn about all bands ELF, VLF, LF, MF, HF, VHF, and FM broadcast and UHF Loop antennas. Contruction, tips, help, questions, and websites are welcome to the group.
.
.
iane ~ RHF
.
All are WELCOME and "Invited to Join" the
Shortwave Listener (SWL) Antenna eGroup on YAHOO !
<http://groups.yahoo.com/group/Shortwave-SWL-Antenna/>

Received my 2nd and 3rd SWL QSL cards yesterday.
They where E-QSLs (to coin a word).
Nice ones from Grasscutter and Sunshine radio.
I've been listening for 40 years, but haven't
persued QSL card very actively.

2037. Re: Renaissance of MW SW radio

Newsgroup: rec.radio.shortwave
Date: 2005-01-28 18:23:18 UTC
From: r2000swler@hotmail.com
Message-ID: <1106936598.751523.130830@c13g2000cwb.googlegroups.com>
Source record: 6085

I really have my doubts about this "world-wide renaissance of radio".
The average user of radio and especially SW isn't likely to go
to the added hassle of DRM. I have played with DRM and
I am very underwealmed. DRM radios consume much more
energy, IE much shorter battery life, then analog. A lot of
users have no access to "made" electricity and have to
rely on batteries. The greater radio complexity also promises
greater user headaches.
Just my thoughts.
Terry

I've read that speech a couple of different times in the past month,
and I think I finally know why I am bothered by it. The speaker
focuses on the benefits of digitalized broadcasts to the broadcaster
and largely (but not completely)ignores whether all of this will be of
any interest to the listener. It reads as though they don't really
understand who their listening audience is. A listner of limited
means in a poor country will hardly be in the position to buy a
potentially very expensive digital receiver. A listener who is more
well of financially will have access to information and music through
an increasing number of sources right now. How would a digital
shortwave and mw receiver improve either the quality of selection
available right now.

>BPL may be yet another example.

During the dot.com boom, they were laying underground fiber all over.
(Downtown Seattle was especially bad, as the place was boomtown squared).
And most of it is lying in the ground unused because of "The Last Mile"
problem. It's as expensive to build the local distribution network to
get it from the fiber companies hub to individual customer sites as it
is to build the long distance network.

So along come the investor owned electrical utilities, who would just
love to have an unregulated business (so that they can get a more
profitable tap on the consumer's veins) yelling "WE CAN DO THAT".

With BPL they can set up in the business to compete with the cable and
telephone companies. So what if the stuff doesn't work, they can replace
it later with the same hardware the cable company uses. BAIT AND SWITCH.

And the regulated rate payers will probably foot a good part of the bill
because the whole company isn't making the profit levels the regulators
will allow.

You are talking about the first generation of a technology. You could
also say the same thing about digital displays on portable SW radios
when they were first available.

A portable CD player can run 50-80 hours on two AA batteries. Would you
have expected that when CDs were first introduced?

Think about where the technology could go.

I can dress very warmly in an overcoat with a nice hat and
formal looking boots. Cheney could have done the same.

I suspect this was the Bush administration's not so subtle
rebuke to the Germans for not quashing the charges against
Rumsfeld.

GLC1173,
.
FWIW - A Standard Size Slinky is 66 Feet Long.
.
ABOUT - Using a Slinky as an "In-the-Room" Shortwave Antenna.
.
Since the Slinky is Helically Wound that when used inside
a room; it is both a horizontal and vertical Antenna.
(This is provided the Slinky is not stretched out to long.)
NOTE - The Regular Size Slinky measures about 66 Feet long.
.
A Slinky that is stretched out about 8 feet from Ceiling
to Floor has an aspect radio of Vertical One to Horizontal
Eight Plus.
.
Here are two ways to mount and position the Slinky.
.
1. As a Vertical Antenna: the Slinky can be stretched out
vertically from ceiling to floor; using a cup hook and a
half pound fish weight; connecting a Feed-in-Line Wire at
the bottom. A Slinky that is stretched out about 8 feet from
ceiling to floor has an aspect radio of Vertical One to
Horizontal Eight Plus.
.
2. As a Horizontal Antenna: The Slinky can be stretched out
horizontally along the ceiling; against the wall; using cup
hooks; connect a Feed-in-Line Wire at one end or in the middle.
A Slinky that is stretched out about 12 feet on the ceiling
at the wall has an aspect radio of Horizontal One to Vertical
Five Plus.
.
The Feed-in-Line to Slinky Connection:
.
1. Most people simply use an Alligator clip for simplicity
and portability.
.
2. If you can Braze the Feed-in-Line Wire to Slinky connection
that is good.
.
3. A Better method for a permanent connection is to:
* Strip off two feet of the Feed-in-Line Wire.
* Start tightly wrapping it around two loops of the Slinky
and complete one circumference of the loops.
* Then adding another loop and tightly wrap the wire around the

three loops to complete a second circumference of the loops.
* This results in multiple contact points that are secured.
NOTE: There is also a method of using a pair of Slinkys as an
In-the-Room "EWE" Antenna. But that is a topic for another time.

.
"The Slinky is fun, but calculations of its performance relative
to a straight wire are discouraging.
.
Below resonance it's just a hunk of wire, only slightly better
than a straight wire of similar length.
.
It's a relatively efficient antenna at resonance (which for a
"standard" slinky is around 7 MHz), but above resonance
it is less efficient than a straight wire of the same length.
.
For HF reception, efficiency generally matters most at the
higher frequencies where the Slinky's efficiency is in decline."

Now that it has been established by 2 of the popular posters to this NG that RS232 protocol and ports go back in history to Noah's time, I was wondering if anyone knows what software I can use to control my Icom R-75.

Everywhere I look, there is some Caveat, such as these:

Of the Icom RS-R75 Radio Control Software.
Windows 95/98 (not XP!) PC Software CD and DB-9 Serial Cable. [Requires CT-17].
Apparently it doesn't work with Windows XP, AND it needs the CT-17 level converter (at $129) to connect the Radio to the computer RS232 Port.
http://www.universal-radio.com/catalog/commrxvr/0175.html (Look for the reference to RS-R75)

Another program, called Commander, requires an "interface".
http://www.qsl.net/civ_commander/

http://www.qsl.net/civ_commander/Help/Prerequisites.htm
"A serial port connected to your radio via an appropriate radio interface
"

Icom RS-232 Interface.
http://www.qsl.net/civ_commander/interface.jpg

I thought that all I had to do was to connect my computer serial port to the radio's serial port. Why all the "interfaces" needed? Why is Windows XP excluded?

I notice that the Commander's web address is CIV commander, and understandably the need for the interface, but I am surprised over the dearth of software for the Icom R75

Anyway, anybody have a link for software available for computer control of the R-75 as a direct connection of the RS232 computer serial port to the radio's RS232 port?

Thanks.

Soliloquy

ZCZC AP04
QST de W1AW
Propagation Forecast Bulletin 4 ARLP004
>From Tad Cook, K7RA
Seattle, WA January 28, 2005
To all radio amateurs

SB PROP ARL ARLP004
ARLP004 Propagation de K7RA

Solar activity was down this week. Average daily sunspot numbers were off by nearly 36 points to 53.4, and average daily solar flux dropped 31 points to 101.7. Last Friday, January 21, we were hit by a big blast of energy from an X7 class solar flare on the previous day. Just one point below two days earlier, the planetary A index went to 61 and the mid-latitude A index was 30, also one point lower.

A severe geomagnetic storm lasted the next couple of days, but conditions really calmed down on Monday through Thursday (January 24-27) of this week. On Wednesday, January 26, the mid-latitude A index went clear down to 0, because the K index upon which it is based was 0 during all eight reporting periods. This is incredibly quiet, and good for HF propagation, at least if the sunspots are around to support it.

We could hope for similar quiet conditions for this weekend's CQ World Wide 160-Meter CW Contest, but the forecast doesn't look that great. The predicted planetary A index for Friday through Monday, January 28-31 is 15, 30, 20 and 20. This isn't due to any flare, but earth is about to move into a solar wind stream, and the most active conditions are expected on Saturday. Conditions should be back to quiet by February 3.

Ken Kopp, KK0HF of Topeka, Kansas sent in a great article that appeared in the Baltimore Sun on recent solar activity. It is full of dramatic descriptions of solar flares, the recent giant sunspot, and the evacuation of astronauts on the International Space Station to the better-shielded Russian Zvezda service module. For a while at least, you may be able to read it (without having to register) by clicking on the following link on,
http://www.baltimoresun.com/news/health/bal-hs.solar21jan21,1,7436903,print.story?coll=bal-health-headlines

Also be sure to check out a constantly updated collection of links to press clippings relating to amateur radio on Ken's web site at

http://members.cox.net/kk0hf/.

Flares, solar wind and geomagnetic storms aren't bad for all radio propagation. 6-meters often gets interesting during active conditions, and a number of reports arrived this week concerning VHF.

When HF operators thought their radios were dead on January 21, OZ1DJJ in Denmark worked K1TOL on 6-meter CW during Aurora in the Scandinavian Activity Contest. You can hear the QSO at http://www.oz1djj.geronne.dk/6m.htm. Click to the left of the phrase, "I am so lucky!!" Thanks to Arne, SM7AED for passing that along.

Jon Jones, N0JK reported a nice 6-meter opening between Arizona and the Midwest on January 21 beginning at 0015z and lasting nearly four hours. Jon was mobile in Wichita, Kansas and talked to K7TOP on 6-meters. K7NN in Tucson and AC7XP and K7TOP in Phoenix worked stations in Kansas, Missouri, Oklahoma, Texas and Tennessee with strong signals.

And finally, ever thought of building your own magnetometer? I've thought for a long time that in addition to noting the College K index, Boulder K index or planetary K index, it would be neat to have one that is strictly local. Where I live in Seattle, I could have a University District K index, although in the city it might be affected by passing trucks. Check a web page devoted to just such an instrument at http://www.da4e.nl/magno.html. You can see current real time results from a homebrew magnetometer in the Netherlands at http://www.da4e.nl/magnetogram.htm.

If you would like to comment or have a tip, email the author at, k7ra@arrl.net.

For more information concerning propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at, http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for January 20 through 26 were 61, 69, 60, 40, 42, 56 and 46 with a mean of 53.4. 10.7 cm flux was 122.7, 113.5, 102.2, 95.8, 94.6, 94.1 and 89.3, with a mean of 101.7. Estimated planetary A indices were 12, 61, 28, 17, 6, 4 and 4 with a mean of 18.9. Estimated mid-latitude A indices were 10, 30, 23, 12, 5, 2 and 0, with a mean of 11.7.

Lloydooo,
You need to increase the layers of aluminum foil that surround your
head, then after that you need to get a refund on all those college level
Physic's Courses, mommy and daddy paid for, cause you shure don't
understand the Physics and Math involved here. As it is obvious, that
you don't comprehend the science, it would be useless for any of us who
do, to try and explain it to you, as you don't have the basic vocabulary
down. Now be a good boy and GO AWAY........

Atomic,

You seem to have newsgroups service (since you're posting here). If your news server allows binary files, go to"alt.binaries.sounds.radio.misc."

You'll find that Coast to Coast AM is posted there almost every day as a RealAudio file (along with many other syndicated radio shows -- Rush, Hannity, Franken, Alex Jones, etc).

I like using paypal too, but here are reasons some folks won't accept it.

You need to have the commercial account that charges fees if you want to receive more than $1000 per month, or to accept any payments funded by credit cards.

They've been accused of freezing people's accounts without a valid reason.

A few months back they had a system crash that lasted about a week. Nothing worked - you couldn't send or get money, or check your balance. Folks who were foolish enough to rely on paypal credit/debit cards without backup options ended up in embarrassing situations. One guy claimed he was arrested at a restaurant because his card was declined.

I believe the Degen 1103 has 450 kHz IF frequency, not 455 (images can appear 900 kHz below a fundamental, which implies a 450 kHz IF).

You'll also need to convert the 450 kHz to ~12 kHz if you plan to send the signal to a PC's sound card for DRM conversion within software. The SatSchneider folks in Germany have suitable converter boards, but I'm not sure the Degen portable would be up to the task in other key parameters.

2066. Using BOTH an attenuator and static discharge resistor

Newsgroup: rec.radio.shortwave
Date: 2005-01-28 21:55:15 UTC
From: Dennis <IntellProperty@lawyer.com>
Message-ID: <1106949315.842997.39730@z14g2000cwz.googlegroups.com>
Source record: 6015

I would like to set up an attenuator like this one for my portable shortwave using a random wire antenna:
http://www.kc7nod.20m.com/atten_.htm

But I also need static discharge capability to protect my receiver. Here is one from the same site:
http://www.kc7nod.20m.com/static_dis.htm

These both seem like straightforward, solid circuits. However, if they're used together, wouldn't a static charge take the path of least resistance which would be the attenuator out the center tap and straight to the radio?

If I'm correct, is there an attenuator/static discharge circuit that will work together?

Thanks!

Radio-mart will put it up as "mint, never used or only used once." You
can bet there will be something in his description to puff it up that
isn't true.

You could hook the potentiometer to the output of the static discharge circuit, so the signal goes through it before it gets to your attenuator circuit.

If it is anything like IBOC, they can keep it. While IBOC touts the
benefits of their modulation scheme, they don't bother to tell anybody
that their hybrid transmissions consume (yes consume) three channels of
broadcasting space on the medium wave band. (I know I've said this
before). All of this, and you get to pay a licensing fee!

Pete

Have you heard about this new hunting reality TV show that's seeking participants? It's called "Hunting for Bambi" and it's like Fear Factor meets Girls Gone Wild. 6 guys get to hunt 12 naked women in the woods with paintball guns. Sounds like it should be a new Olympic sport if you ask me! Definitely better than hunting deer. lol! Go to www.huntingforbambi.com if you're interested in signing up.

And therefore quite rightly he should wear clothing that keeps him warm.
There are literally hundred of possibilities including nice dark suits
and coats. A white fur collar, a rapper's cap and a jacket emblazoned
with his name are not included in the collection of suitable wear for
such an occasion. He has no excuse sorry.

Shit mon, I never thought of that one!
Wonder how many of his followers will
"Drink the Kool-Aid" or "Shed Their Containers"
when the old money huckster himself finally does
drop like a fly in the rear window deck of
the car on a 90° day in the sun in the parking lot..?

Pay close attention to who gets all the money left to them
and if 2 or 3 other Last Will and Testaments turn up
in Probate court. (this should be VERY amusing!)

My guess is his whole churchy thing will turn out to
be a cheap carbon copy of $cientology by
2006 with the closest associates in the boardrooms
and full access to the bank accounts.....get on the telephone.... :)

Such fools! Such utterly brainwashed morons......!

I can't seem to get a good answer from Radio Shack on this question, so I figured someone on here someone would know it. This is not a shortwave question, but I figured there is a higher level of tech knowledge on here than Radio Shack workers. Verizon just sent me an upgraded wireless router for my DSL. I also have a second computer than communicates with the router via a USB adapter. Anyways, I had a Netgear wireless router that I was using but no longer need since Verizon sent their new and improved one. Can this Netgear router be used on a third computer to receive the DSL signal from the Verizon router OR will I need to pick up another USB adapter to receive a signal. I am not sure a router just transmits signals and maybe doesn't act as a receiver of signals, thus the need for the USB adapter. Any information appreciated.

I agree with the other responses. It is ok for the beach and camping. I brought mine out west when camping last summer for over a month. The band selector fell off halfway through the trip and I had to use a paper clip to switch bands. It did fine picking up many FM, AM and SW signals, but no DX machine. Also, it is analog, so
frequencies are difficult to estimate exactly. But, in a way I was less worried over the radio as it cost just $10, not $350....so I didn't worry much about losing or dropping it during the trip.

Speaking of HF-150s, there's one on Ebay right now:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=15051&item=5746183538&rd=1&ssPageName=WDVW

Could be an interesting auction.

Funny thing is, I noticed a Satellit 700 up for auction as well:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=15051&item=5746243261&rd=1

The bidding on the 700 is already up to a whopping (and mind boggling)
$565.00. I'll bet the Lowe goes for significantly less than this. I
really do believe that Ebay is a great marketplace for tabletop
receivers and some 'portatops', but not so good (and occasionally
terrible) for portables.

www.signalhilltrading.com sells the exact same radio.I know a guy who owns one.The two little slide knobs on the front are oval shaped and on his radio,the little dial indicator bar that moves up and down when tuning a station is way out of alignment instead of being straight across like it is suppose to be.I think the same company that makes the Signal Hill radio's also makes the Bell and Howell radio's too.Bell and Howell used to make some fine cameras and movie projectors many years ago but their name on those cheap two bit junk radio's sure doesn't say much for Bell and Howell nowdays.

I apologize for this being a little off topic. I've recently installed
a cb radio and am picking up lots of alternator whine that is coming in
from the antenna. I've ordered an alternator noise suppressor
(http://www.crutchfield.com/S-VqGuUiolKOG/cgi-bin/ProdView.asp?g=181150&id=detailed_info&i
=127ANS80)
which arrives next week.

Looking at the online installation instructions
(http://akamaipix.crutchfield.com/Manuals/127/127ANS80.PDF), it
indicates that I may have to add a "10000 or 50000 mfd capacitor" to
completely block the noise. The installation looks simple enough, but
where do I buy one? I've searched the web but can't find it. Does
"mfd" translate to another measurement? Can anyone point me in the
right direction?

Thanks in advance.

2090. Re: router question

I am not sure if I understand your question.
A router is like a telpehone central
office exchange. Each PC (on a net)
has to have a NIC (network interface card)
These can be ISA, PCI, integrateed, PCMIA
(or whatever you call the little plug in cards
that laptops use), or USB.
Each PC has a ethernet cable, today most
look like a telephone jack on steroids, but,
in the "good old days" we used 50 thinnet
with BNCs and I have even seen some odd IBM 2
pin coax. But almost everything today is either CAT5
or fibre optics.
You hub has one port called "uplink", (different terms
are used) that connects to your Cable/DSL or real world
ethernet port. My Ntegear T10 has 8 femal connectors.
One has a switch to allow it to function as a normal
prot, or an uplink port.
Say I have four PCs and a cable box, I don't we only have
2 and a use56K dialup, you will run one cable to each
PCs NIC device, in this case your USB adaptor. Then the
uplink port will go to the cable modem.
But each PC has to have it's own NIC.
An each will have to have a unique TCP/IP assigned.
Some hubs, modems are smart and use DHCP.
Others you will have to assign "static" numbers.
This will at least get you pointed in the right direction.
In a realy bad evil situation, you mihgt have to have
1 PCwith 2 NICs to act as a bridge. I don't know how far
hubs and cable modems have come in the last few years,
but when I helped a friend set his up 3 years ago, he had to
go the ugly route.
Wireless systems face similar issues. All PCs must have
a unique TCP/IP address. This is perhaps the single most
important thing to learn. I learned the hard way at 3:00Am the
hard way. We have one modem and use "network connecton
sharing" to allow that. It was a major PITA to set up.
I am assuming that you are using TCP/IP and not "netbui" or
Novel.
Terry

2091. Re: Using BOTH an attenuator and static discharge resistor

The 10K resistor will bleed all but a nearby
lighting strike(or EMP event) safely to ground.
If you are worried, use the 0.01uF 500WV cap
in series with the CENTER/WIPER output.

In the "static" discharger I doubt if the NE2 will
ever flash, the 10K will effectivly bleed most static
to ground.
I wish there was an easy way to post drawing in a NG.
Print both diagrams, and wire the pot in the place of the
10K fixed resistor., place the capacitor between the wiper
and the output jack.
There one box that serves both functions.
Terry

2095. Re: Renaissance of MW SW radio

Newsgroup: rec.radio.shortwave
Date: 2005-01-29 01:01:15 UTC
From: r2000swler@hotmail.com
Message-ID: <1106960475.380161.306570@f14g2000cwb.googlegroups.com>
Source record: 6044

I know, I have one of the first Diamond Rio MP3
players (PMP300?) and it did well to run for 4 or
5 hours on a "AA" cell.
I treated myeself to a Rio Chiba, that has 8 times
the built in memory, and will run on a "AAA" for at
at least 20 hours. (I couldn't stand NPR or commercial
AM/FM radio any more and I can't see trying to put a
SW in a modern auto BTDT and still have the scrs!)
But having said that, I just don''t see a market big
enough to get the economies of scale to make it
practical. By the time that happens, the "third" world
will all have telephone and modest internet access.
A lot of 3rd wrold places already have very deep
cell phone penetration (I ownder why the market
guys came up with that word?)
Look at how many MP3 players have been sold.
Then look at how many SW radio have been sold
since radio began. I am willing to be a nice steak
dinner that MP3 players have the lead, or will very
soon. I know 30+ people who have MP3 players.
Now some like my sister have a PDA that also
is a MP3 player. I know, not counting the hams,
maybe 4 poeple who have SWs. And one is my wife.
The other 2 are people Ihave given my oldr rigs
(RF2000) and Sony ICF?-7600 to.
Everyone wnat a MP3 player.
Only us nuts want a radio that requires a "long antenna
wire".
I still think it is a whizbang technical solution looking for a
problem.

Terry

I've been posting here for several years and have never posted an OT subject or link. I came across the story that I have linked to below and decided I just had to go and do it this time...

I'm exploring 41 meters tonight because it is clear here tonight for the first time in a while... I'm also having a beer...

Which leads me to this....

http://www.ananova.com/news/story/sm_1261997.html?menu

LOL !!!

That is priceless.... CHEERS !!!!!

If that article wasn't so frightening, I'd laugh. Hard to believe that a naked breast is just fine for a new born and a few years down the road it is a "traumatizing" thing to see.

I'm living on the same planet with these people too.

Respectfully,

Michael

ADONIS,

How do you know that the Alternator Whine
is coming in from the Antenna ?
.
Turn the Radio On and the Volume Up so that you can
clearly hear the Whine.
.
Disconnect the Antenna from the CB Radio does the Sound
of the Whine Stop or is it Greatly Reduced ?
+ Then in-fact the Antenna is the Source of your Noise
{Whine} Problem.
- However if the Whine is just as Loud as when the
Antenna is 'connected' then the Problem is elsewhere.
.
Two Possible Elsewheres :
* The CB Radio Ground.
- Recheck your Radio's Case Ground Connection
+ Use a 4"-8" piece of Braided Webbing as a Ground Strap
between the Auto's Frame and the Radio's Case.
* The DC Power Input Wires.
+ Use a Noise Suppression Capacitor on both DC Power Leads
going to the Radio.
+ Wrap the DC Power Leads in Foil.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

No doubt the VHF convertor will be removed and sold in a seperate auction.

Radio-Mart will sell the radio as "almost mint condition, this radio is
very clean and you won't find another one like it blah blah, but any faults
that are found by the buyer and NOT PICTURED are your fault," but with
400x300 washed out images attached.

From: snow <dlessard1@verizon.net>
Message-ID: <1ECKd.58$6i4.19@trndny02>
Source record: 6158

I got one uplink and that router sends the signal to another computer (USB wireless Adapter). What I am asking is for a third computer can I use a router to communicate with the uplink or another USB wireless adapter. I know a USB wireless adapter will work, but I was wondering if a wireless router can take the place of the adapter. I assume likely not since a router is made to send signals out. So can a router replace an wireless USB adapter.

2113. Speakers

Newsgroup: rec.radio.shortwave
Date: 2005-01-29 03:02:21 UTC

Interesting thing happened tonight. For some time I've been using a speaker that's received plenty of criticism: the Drake MS8. Earlier tonight I heard VOIRI (Voice of the Islamic Rep. of Iran) on 6120 khz and the signal was incredibly strong and clear. I decided to sit back and listen, but the announcer's voice was just so bassy and 'muffled' sounding that it wasn't always easy to understand her.

So, I decided to get an amplified Sony speaker out of my closet and hook it up to my R8B. The Sony speaker definitely produced a sound that was somehow 'smaller'. Even so, the announcer's speech was perfectly intelligible on the Sony, while it wasn't on the MS8. From now on, I think I'm just going to use the Sony speaker. I think there are still better speakers out there and when I find one I'll 'trade up'; but for now the Sony will do.

I guess the lesson here is: Don't overlook the significance of your speaker!

Steve

Bob Sillett's colorful Shortwave Log has a lot of bells for being freeware.

Requires no interface, just a standard cable.

Allows semiautomatic downloading of various online freeware schedule databases (the FCC Intnl SW broadcasting database, Primetime's listings, ILG, the entire FCC amateur callsign database, all LongWave airport NDB;s, etc.). The program converts them all over into its own format (JET). You can filter the database with a few mouseclicks from tens of thousands down to a few hundred or less: e.g. asking it to now show whats playing right now in English coming out of Costa Rica. You can autolog receptions, later scan in a received associated QSL card. It can format a portion of the log, say a month's worth into the exact layout needed for reporting your catches to the the world's major SW clubs.

I control my ICOM R75 via Shortwave Log with a cheap laptop PII 300MHz, 128 MB RAM, Win98SE, although with XP Shortwave Log has sound support too!

You're right, of course. Death is usually a pretty sad time for all involved. I wish him and his family all the best and may they get the strength they need to get through this trial. The good Doctor has amassed a great volume of work. It reflects his dedication to the calling.

mike

I don't know why death worries me..having lived such a pure, wholesome, modest, unassuming, self effacing and saintly life. I've won the Mister Modesty Awards every year for the last three decades running and I hardly ever mention it more than twice a week.

All in all, much like dxAce, I'm just too valuable a member of the Human race to be going across the Styx any time soon.

Sel <sel@enternenospam.co.nz> wrote in
news:cte9t1rri1@lust.ihug.co.nz:

Actually, it's rather useful. Maybe not in terms of glamorous programs with all the bells and whistles, but the program features a PAN function. You set (on the radio itself) the squelch to max, assign a frequency to VFO A and another to VFO B, and set the radio to search between these values. (such as 7.00 and 10.00 Mhz). Even though you initially won't be able to hear anything due to the MAXed squelch, the PAN function builds a graph representing the areas of greater and lesser signal strength. When the scan is complete, turn the squelch down, and using the left mouse button, click on any peak that seems likely to represent a signal. Viola, the radio tunes to that frequency. It might not be real time, since the scan takes a while, but a little experimenting even now shows that the scan continues even when the squelch is turned down all the way. (I do believe that the programmer recommends a higher squelch setting).

I don't know how old this program is, but it is listed as a "Legacy" program on this page: http://tinyurl.com/4nlrq and no price is listed. Exactly what is Legacy software?

Anyway, the program also has a data base of established broadcasters, Listed as Utility, Shortwave, and AM Broadcast. Click on the Broadcaster, various frequencies are show that would be in use by that broadcaster, click on the desired frequency, and you are tuned to that frequency. I don't know how valid the data base is, but when you tune to a frequency that is represented in the data base, the program lists details of the broadcaster/s.

More than I expected, and I am still learning.

Thanks.

It's been a while since I've played with it, but the tlc/tk program is
needed in order to run the tk-75 program. If I understand it right, the
tk-75 program was designed for Linux, and the tlc/tk program lets it run
under Windows.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Leonard Martin <lmarti49NOSPAM@bellsouth.net> wrote in
news:lmarti49NOSPAM-C52A2A.19055128012005@bignews.bellsouth.net:

I just have it connected to the High Impedence jack. One time (on the advice of a local HAM), I just terminated it with a Bananna Plug and pushed it into the center of the coax connector. I really didn't see much difference. My Yaesu FRG-100 has a selector on the back of the radio that needs to be set depending on the jack in use. The Icom R-75 has an antenna selector button and is represented in the LCD display as well. I need to specify Antenna 2 for the high impedence input that I use, otherwise the reception is almost nil. If the coax jack was used, Antenna 1 would be selected.

The indoor antenna is terminated in the same way.

For the outdoor antenna, the wire itself comes into the house and right to the radio. It comes through a small opening in the frame of the vinyl window, and comes across the baseboard to the radio. There is no metal nearby, and I have no problem with noise generated in the house, otherwise I would use coax until it was outside the house.

With the outdoor antenna, when I was renting a home with a very tiny back yard, I ran 2 outdoor antennas. One was on the diagonal across the yard, the other ran to the 4 conners of the yard. They in turn ran to a switch that allowed me to select which antenna I wanted to use. The shorter antenna actually came in handy often, producing stronger signals on certain frequencies.

The first time I saw this radio was in an advertisement in Parade
magazine about two years ago. After a brief search, I found that the
best price for them was at Carol Wright Gifts. It seems that is still
the case.

Start at http://www.carolwrightgifts.com/

and search for "shortwave". You get:

http://www.carolwrightgifts.com/cwg_v2/cwg_layout_base2.cfm?mid_sec_page=cwg_prod_detail&seq_no=4&min_seq_no=600&SingleItem=94654&CFID=6784285&CFTOKEN=93332188

or

http://tinyurl.com/3lovm

Carol Wright is selling Bell & Howell 9-Band Radio, Item 94654, for
$8.99. It's in the category Leisure & Travel: Electronics. I don't know
about the shipping charges.

Dear Soliloquy,
On my receiver, radio shack dx 394, very strong signals in sideband can be difficult to clarify. What I do is set the "step" to 0.1 Khz then reduce gain down to just above inaudible, then try again. Sometimes I have to play with the knob to get the sound audible. You might try that. I am assuming you have a better radio and it might have some other options for sideband tuning. Best Wishes

Peace We are the Providence of God +

It was a "profile stop". Guy did look like a trafficker, then twitched and acted so nervous that they were pretty sure he was. The catch-release and stop-again is also common, as it really makes the guilty snap - in this case no harm came and he went on his way - to whine, whine, whine.

And at this stage, whining does no good. The so-called "war on drugs" has permanently erased American freedoms that were earned only at the end of a gun barrel, and could never be restored except by same. Even if Canadian freedoms were a 'gift of the crown', I suppose you still feel a touch of remorse at the sight of them washed away. Get used to it. In the efforts to control the gang-banging murderous subterranean economies of drug culture, we have all lost precious freedoms, yet the original problem remains worse than ever. Until we have no freedoms, and still have drug wars. Then what?

No I don't see the humor in it either, and I hope Canadians understand where it's coming from. The real irony, is that it was a Canadian cop who got upset, and he surely does the same exact thing to citizens of his own community, and it's fine with him then.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

One of the BEST software for the R75 is RXplus. It's not free but you have a 30 day trial. Download it and try it. It has so many features like auto ECSS and decoding, but too many too mention. I worked with the coder of this software for the Kenwood R5000.

He controled my computer thru remote desktop from Canada to here in Florida. It took him a couple weeks and he added the R-5000 to the list his software works with. You'll love it and won't be able to stop fooling aound with it. It even works on the Drake R8a/b.
It also can do DRM in some cases with it's built in 12Khz IF.

Here:
http://www.cam.org/~noelbou/RxPlus/

Have fun

In reality it would seem as though RCMP are the ones who screwed up, rather than the fellow from Texas. Exchange programs have been fairly commonplace for a very long time and if the RCMP didn't have the brains (Duh!) to properly instruct the gentleman from Texas as to what their rules and regulations were, then that is the fault of the RCMP rather than that of the officer from Texas.

So therefore, you, 'tard boy are actually the one who screwed up by trying to portray the fellow from Texas as being in the wrong.

I'm not surprised.

When you folks up there get your %#&@ together, be sure to let us know.

Yeah

they just had a show on chupas. It's so funny how they have all these wacked
out con artists
on the show. At least Art Bell shows his disbelief a little more with these
guys. Some shows are fun but I think Noory has the personality of a
pencil...

>magazine about two years ago.

From what people are posting about the radio, it has its problems and buyers may have returned them to the sellers. If you look on ebay, I get the feeling that distributers dumped them and the ebay bulk buyer / seller is trying their hands at selling them.

I think I will keep my $10 and move on.

It also should be noted that Yaesu's CAT adapter (or *one* of them if
they did multiple designs) was more than a level converter -- it had
optical isolation to avoid any ugliness with ground loops or the like.

I own both the bell and howell and the coby (link below). The coby was bought at ABC instore which often runs the radio for a hair under $8.00. It is a superior radio to the Bell and Howell for the simple reason that the poor analog dial is replaced by a digital readout with manual dial controll. Neither of these should be compared with any of the numerous $40.00-$100.00 portable shortwave radios commonly available from any number of sources. However for $10.00 or less (Coby), they very well accomplish their task as the lowest rung on the ladder shortwave capable radios. If you can spend between $45.00-$65.00, I would recommend the Degen/Tecsun 1103. The jump in features/quality/performance is huge from what you get with the 2 $10.00 radios mentioned. But if your intended use and/or budget dictates something in the low end range then I say go for it, giving the nod to the Coby.

An R8 they ain't, but who would expect to find an R8 class radio for $10.00?

Good luck and happy listening

Doesn't this thing use XM's rumored ''Connect and Play'' scheme where
all the brains are in the base of the antenna and the only thing in
the radio is a control bus/audio interface? Does the XM antenna plug
look like a coaxial or like a Mini-USB?

I like to buy shelf system speakers at yard sales. A 4" speaker in a
relatively large plastic baffle sounds pretty good. Beware of 2-ways,
the HF speaker just makes the noise worse.

On 28 Jan 2005 19:02:21 -0800, sdaniel13@nyc.rr.com wrote:

'Blue' radio to debut in Memphis

Ed Hicks

Jerry Springer is not coming to Memphis radio -- at least not yet -- but Al Franken is. Franken, the former Saturday Night Live comedian who made a splash last year with his book about Fox News, will be featured on a new AM format starting Friday.

Entercom Memphis will change the call letters of radio station WJCE-680AM on Friday, and will launch a liberal talk radio format under the name Progressive Talk 680 WWTQ-AM, broadcasting the Air America Radio network.

Operations manager Jerry Dean says the station will go with the Air America format for the first few months, but hopes to add a live morning show thereafter. The station has not decided who will host that show, Dean says.

The station's new format will offer current political topics, social activists, occasional comical twists and "a creative approach to liberal talk by the best artists available," he says. It also will offer local news, weather and traffic.

Air America is heard on 47 stations from Los Angeles to Washington, D.C. The network's appearance on WWTQ-AM will mark its debut in the South. Dean says it's about time.

"Shelby County is a blue county in a red state," Dean says. "65% of Shelby County voters went for Senator Kerry. Plus, it's different. And when you can bring a format that hasn't been done before, that's half the battle."

Entercom Memphis is a division of Entercom Communications Corp., which is based in Bala Cynwyd, Penn., near Philadelphia. The company is the fourth-largest radio broadcaster in the nation.

Entercom is not the only broadcast company that's trying a progressive format. In Cincinnati, arguably the nation's most conservative major city, Clear Channel Radio has launched a progressive format on WCKY-AM, offering Jerry Springer, who once served as mayor of Cincinnati.

Springer's talk show is not yet syndicated. Dean says Progressive Talk 680 WWTQ-AM has no plans to offer it.

The station's scheduled lineup kicks off at 5 a.m. with "Morning Sedition" and ends at midnight with "The Mike Malloy Show." Franken will be on the air from 11 a.m.-2 p.m.

The other programs currently on the schedule include "Unfiltered," "The Randi Jones Show" and "The Majority Report."

WWTQ-AM's signal reaches Tennessee, Mississippi, Arkansas, Louisiana and Missouri, making it the most powerful AM signal in the region, according to Entercom.

Besides Memphis, Entercom operates stations in Boston; Seattle; Kansas City; Indianapolis; Milwaukee; New Orleans; Denver; Portland, Ore.; Sacramento, Calif.; Norfolk, Va.; Buffalo, N.Y.; Providence, R.I.; Greensboro, Greenville/Spartanburg, N.C.; Rochester, Minn.; Madison, Wis.; Wichita, Kan.; Wilkes Barre/Scranton, Penn.; and Gainesville/Ocala, Fla.

There is some security with Wi-Fi. Especially with the newest routers.
Wireless is becoming very popular. So broadcasting to neighbors is highly
remote with improved WiFi products.

I agree that this is what SHOULD happen, but of course it doesn't always work out that way. In the course of correcting one set of problems, one often just creates a whole new set. Also, I'm still not clear on the role of Drake in the development of this new Eton receiver. I don't see anything about it on the Drake website, whereas I do see the Satellit 800 on the Drake site. Will Drake repair defective E1's, as they do the Sat 800's? I keep seeing the Drake name attached to the E1, which is encouraging; but what, exactly, does Drake have to do with it?

I'm with you there. I also don't think that the AM/MW/SW and FM will be a big selling point with people who are shopping for satellite radios....which makes me question the wisdom of combining so much in a single package.

Let us keep our fingers crossed!

OK I think I understand it now.
My sisiter has a HP laptop with built in wireless
support. I took it to work and we have a commons
area with an unrestricted WiFi port.
I played with her PC orver lunch, while several other
people used the same WiFi "port/device/wrieless hub".
You must have a hub that also has WiFi capacity.
If you have that, then you should be able to add several
additional WiFi users. At some point, about 5 in
the only situaiton I was in, the network gets real
slow. Even more so if someone is downloading
large data (think MP3) files.
So IF your router has built in WiFi, and you have
additional USB WiFi devices then yes you should be
able to add more users. The exact how to wil
depend on security issues.
When my aunt came in for Chrstmas, the hotel they
stayed in had WiFi. But when she fired up her laptop,
she connected to the next door hotel's WiFi port.

"ShortwaveMan" <qrz@radio.com> wrote in
news:eVFKd.647$Nn1.463@newsread1.news.pas.earthlink.net:

I had the DX-394, I liked it. I bought mine at a HAM Fest, for about $120. When I got it home, I realized that the display LCD segments showed signs of being dim, maybe some were missing. I took the radio apart, then the display assembly. If memory serves me right, they used a contact pad to transfer the electrical signals to the completely removable LCD display. I cleaned the contacts (and probably the LCD Display where it contacted the pad), and reassembled. The display was as good as new. I do believe that desoldering and resoldering of a shield for the display was necessary.

I always get a chuckle when the topic of the DX-394 comes up on this NG. Despite some people's assertions that the radio is not that good (I do not hold those assertions), the DX-394 has quite a following. It amazes me the price that people get for the DX-394 on e-bay.

Anyway, thanks for the suggestion, I'll look at the tuning step next time. I use a Yaesu FRG-100 and an Icom R-75, so when I was unable to receive the signals per my original post, I tried both radios. But it didn't help.

Thanks.

No, there will be no problem. The ground of the static discharge unit, the attenuator and the radio are all common to the coax shield and should bonded to a ground rod.

If Ten-Tec holds true to form, they will not support the software for the radio for more than 1 year - then you are forgotten. The RX-350 firmware has not been updated in well over 2 years. Ten-Tec doesn't even answer e-mail enquiries on the subject.

Nobody uses millifarads, except maybe the boom car crowd. "mfd" or more commonly "mf", prior to (the 1960's) metrification/SI rationalization meant Microfarads. And picofarads were "mmf" micro micro farads.

You are quite right to question this. I have an antenna wire laying directly on my roof. It's been there for over ten years and works as well as the one I have in the back yard that's totally suspended. The one on the roof is bare wire. I have used it for transmitting where it also works fine, as long as it's not raining. In wet whether, the SWR goes nuts but this would not be of any concern for receiving. You are right about the house electrical wire. Thousands of ham antennas have been made from it.

I would say this whole idea has been sold by people more interested in getting the money of ignorant investors that building a workable system. BPL will likely die shortly after implemenation if it ever gets off the grond at all. The cost is just to high for it to be viable.

Hlp pls. 1520-1648, Jan 29
Male presenter in vernacular (pakistani dialect) ID at 1558 clearly says Pakistan with sig 45444. id at 1600 too fast to follow but sounds like "Radio Aka ...(several words)... followed by female presenter Several ID's by 1632 and still words too fast, Radio Aka....or Ara .... Signal fades into bkgnd by 1648.

Really confused by one ID in vernacular near end out pops the words". "P.O. Box 5077".
They have post office boxes in Pakistan?

ILG, WOR, CunbreDx, hard-core dx, etc., no clue at this freq.

I gotta set up my laptop to record.

thnx...jimg

A better radio will just allow you to here the interference better. An external antenna, well away from the house, fed to the radio via shielded transmission line would help.

>From the DRM website:

The DRM on-air system will propel the AM broadcasting bands below 30 MHz - short-wave, medium-wave and long-wave - to the next level.

DRM is the only universal, non-proprietary digital AM radio system with near-FM quality sound available to markets worldwide.

The quality of DRM audio is excellent, and the improvement upon analogue AM is immediately noticeable. DRM can be used for a range of audio content, including multi-lingual speech and music.

Besides providing near-FM quality audio, the DRM system has the capacity to integrate data and text. This additional content can be displayed on DRM receivers to enhance the listening experience.

Unlike digital systems that require a new frequency allocation, DRM uses existing AM broadcast frequency bands. The DRM signal is designed to fit in with the existing AM broadcast band plan, based on signals of 9 kHz or10kHz bandwidth. It has modes requiring as little as 4.5kHz or 5kHz bandwidth, plus modes that can take advantage of wider bandwidths, such as 18 or 20kHz.

Many existing AM transmitters can be easily modified to carry DRM signals.

DRM applications will include fixed and portable radios, car receivers, software receivers and PDAs. Several early prototype DRM receivers have been produced, including a software receiver. The DRM system uses a type of transmission called COFDM (Coded Orthogonal Frequency Division Multiplex). This means that all the data, produced from the digitally encoded audio and associated data signals, is shared out for transmission across a large number of closely spaced carriers. All of these carriers are contained within the allotted transmission channel. The DRM system is designed so that the number of carriers can be varied, depending on factors such as the allotted channel bandwidth and degree of robustness required.

The DRM system can use three different types of audio coding, depending on broadcasters' preferences. MPEG4 AAC audio coding, augmented by SBR bandwidth extension, is used as a general-purpose audio coder and provides the highest quality. MPEG4 CELP speech coding is used for high quality speech coding where there is no musical content. HVXC speech coding can be used to provide a very low bit-rate speech coder.

The robustness of the DRM signal can be chosen to match different propagation conditions.

Hi OM,

BPL suffers the same problem: "The Last Mile." However, in rural
America it is not 1000 customers in the last mile, it is the 3
customers in the last 10 miles.

BPL has all the smoke and mirror investment potential as a new
millennium dot.com. WiMax will bury this fizzling comedy.

For a disparaging view of WiMax:
http://www.eweek.com/article2/0,1759,1668327,00.asp?kc=EWYH104039TX1B0000665
It is obvious that even the most restrained and pulled back design
wins hands down over BPL for BPL's proposed customer base.

I would only disagree with the assessment of Buchanan.

As for New Orleans becoming "Venice," the entire landmass south of Lake Pontchartrain including the New Orleans metro area has been sinking for decades -- possibly centuries. Oddly enough, the other side of the lake is actually rising at the same rate.

It's a geological phenomena -- nothing from "global warming." However, chances are that it will be a severe weather event that finally overwhelms the levee system in southern Louisiana and causes catastrophic flooding.

Sounds to me like you were hearing FEBA Radio directed to Afghanistan, in various languages. They might most likely be mentioning Pakistan during the broadcast or during the news. I'm not sure about the P.O. Box 5077 though.

It would help also if you gave a geographical region you are listening from.

I also find a listing for IBRA Radio around that time, same frequency, also
directed to Afghanistan out of Russia.

So chances are it is either FEBA or IBRA. There may be some confusion as to who
is actually scheduled there.

I did see it listed too as IBRA, but that may have been in error. If I recall, FEBA is more of a 'soft sell' regarding matters religious.

If you heard an interval signal, you might want to check on this page:

http://www.intervalsignals.net/

Not sure exactly which country FEBA might be listed under, so you might have to poke around a bit.

I heard this story on the radio today and I think this tragedy happened recently.

Bad guys robbing two couples. One lady interrupts robbers, saying "Leave us alone"
Bad guys say "Shut the hell up and give us your money"
Lady says "What you going to do shoot me?"
Boom

Note to self, when being robbed by angry robbers don't be an ass.

Scott's life's work was to enrich himself and live
well. He certainly was a success at that. The theology
he preached (if "preached" is the right word for the jokey
riffing he performed) was weird to say the least and was often
offensive to me, and I'm under no obligation to take it
seriously, or respect him for it.

Yesterday I spotted an atomic clock at the Rite-Aid Drugstore chain. It's $9.95, and although it doesn't specifically say "atomic" or "atomic clock" on the package, it's certainly one. It's described as an "automatic setting" clock, never needing manual setting, and has a switch for various USA timezones on the back. I believe the manufacturer was listed as "Elite Group", if I recall.

The media is the issue of the holocaust.

Where were they in 1939?

Why did the German people allow this to happen?

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Ah, but the liberal fashion police will certainly have something to say about it!

But I'd rather have them bitching about what the Vice President wears than actually trying to run anything any old day.

I did get a big kick out of the 'tard boy David trying to say that there were 'sub zero' temperatures in Washington on the day of the inauguration.

'Tard boy liberals never check their facts, they typically just run with whatever suits their agenda.

"Lucky" <Lucky@TheBotStopsHere.com> wrote in
news:10vmk0lgdntbi41@corp.supernews.com:

I downloaded it and am using it on and off. It's a little buggy. It crashed my system and I had to ctrl/alt/del the system to shut the process down. It also generated an "Exception Error" once, when I was attempting to use the tune up/down arrows below the tuning knob.

The crash happened when I was tuning the radio by hand despite being connected to operate via the program. Since then, I have ceased changing the radio settings while the program had control, I have had no more problems.

I wasn't expecting the ability to control the volume of the radio speaker from the program, a nice feature of this software. It can give you the impression that something is wrong with your radio when you realize that the radio volume knob is turned up, but no sound ensues. It took me a little longer than usual to get used to the program's features, but they look impressive.

I especially like the ability to "sound process" the signal that is sent to the PC speakers. This necessitates turning the volume down on the radio, since there is a slight delay between the radio speaker sound and the PC sound.

I did a post earlier in this group concerning a numbers station. I found it while controling the radio with this program, using the scan function, and was also impressed with the sound processor clearing up the signal.

Overall, very nice.

Thanks.

Excerpt from article: "The Texas state troopers were in B.C. as part of an exchange program with the RCMP to spot and stop drug traffickers. Called Pipeline Convoy, the program involves training officers to detect people who are lying or trying to hide things from police, said RCMP Sgt. John Ward."

Odd thing is, even more than the need to detect lying citizens, we need a method to detect and hold liable lying police officers and politicians.

This is what America has become:

"Woman Considers Fighting Candy Bar Arrest. Washington (AP) - A woman who was handcuffed and jailed for eating a candy bar on a subway station escalator got her day in court Thursday, but didn't get much satisfaction.

Stephanie Willett was eating a Pay Day bar on an escalator in the Metro Center station on July 16, and received a warning from Metro Transit Police Officer C. Curry Hagler not to eat on transit system property. She stuffed the last bit of the bar into her mouth as she approached the turnstile.

After receiving a second verbal warning from another police officer, Willett said Hagler warned her she would be arrested if she continued eating. When she responded by telling Hagler she should "go looking for real crime," she was detained, searched, handcuffed and arrested on a charge of eating on a public transportation conveyance. After spending three hours in the District of Columbia Jail, Willett paid $10 to be released and waited for her court date."

http://www.news8.net/news/stories/1004/178462.html

She was no longer carrying the candy bar, simply chewing the remainder of what she alreay had. They honestly expected her to "spit out" the

remaining candy, so as to be in compliance with the law. When she was further challanged, she said that they should "go looking for real crime." They arrested her for finishing a candy bar. These same transit police also cited a wheelchair bound boy that suffered from Cerebral Palsy for swearing when he was unable to find a working elevator to allow him to leave the subway station.

Do you think that any of these zealous officers ever speed, or park illegally, or make illegal turns on red, or cheat on their taxes, etc. We have no way to rein in their illegal activities, yet they can make everyone else a criminal by zealously enforcing even the slightest infraction of the law.

Your tax dollars at work. We haven't even seen the tip of the iceberg yet.

Soliloquy.

2260. BPL and Lunatic HAMS

Newsgroup: rec.radio.shortwave
Date: 2005-01-30 03:20:54 UTC
From: Soliloquy <Notvalid@notvalid.com>
Message-ID: <Xns95EDE358268B5SoliloquyTriesHarder@216.168.3.44>
Source record: 6209

I was listening to a show on shortwave this afternoon, and they were discussing the fight to implement BPL around the world. They were saying that HAMs are being mischaracterized as lunatics and relics so that they can sway the public to support the implementation of BPL.

I hope the people so desperate for BPL are never in an area of widespread disaster, say vacationing where the tsunami hit. Though the BPL interference would be gone with the destruction of the powerlines, likely HAMs would not be there to help either, since the abolition of their hobby would leave them with little interest or equipment.

Though the computer oriented people are zealous to implement another un-needed communication mode, I hope that HAMs and SWLers continue to resist the implementation of systems causing widespread interference to communication, especially communication that can be and is routinely used to help the public when disasters strike.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

RHF wrote:

> Here are a few LINKS for Air Variable Tuning Capacitors

It's a good thing, too. I went to Radio Shack last week for just this item. I told the salesperson I needed a variable tuning capacitor. They gave a me a blank look. I elaborated, telling them that the thing has lots of aluminium fins and a shaft for turning them back and forth. He promptly escorted me to the potentiometers.

Not to be put off, I went to another Radio Shack and repeated my description. This time, I got led to, you guessed it..the automotive FUSE display.

pathetic..by now it was mid day and time for lunch. I went into a nearby Wendy's and had a salad with Ranch dressing. It was ok, but I HAD ordered French dressing.

Either the quality of personnel is dropping very badly, or there's not much training being given. It's hard to be helpful when a know nothing customer knows infinitely more than you do.

Not in the USA.

==========
Only metric prefixes for 10+6 or more have an upper-case abbreviation (e.g.,
M = 10+6, G = 10+9, etc.). In particular, note that the prefix m indicates
10-3 and M indicates 10+6. The difference between an upper-case M and a
lower-case m is nine orders of magnitude! One should be warned that American
manufacturers of capacitors often use "mF" or "MF" to indicate microfarads,
a practice that is both incorrect and misleading.

The proper abbreviation for "kilohertz" is "kHz": only the "H" is upper case.

Note that the proper abbreviation for "second" is "s", not "sec".

The same abbreviation is used for the singular and plural form of a unit.

A period is not placed after an abbreviated unit, unless it is at the end of
the sentence.

http://www.rbs0.com/tw.htm

==========

==========
* mF: Milli-Farad, 1x10-3 Farad (1,000th of a Farad) - uncommon
* uF: Micro-Farad, 1x10-6 Farad (1,000,000th of a Farad)
* mF: Micro-Farad, a very, very old term, still sometimes used in the
US (True!) - Causes much confusion.
* ufd: Micro-Farad, another very old term, still used in the US
* mfd (or MFD): Yet another antiquated term - US again!
* nF: Nano-Farad, 1x10-9 Farad (1,000,000,000th of a Farad) - Common
everywhere except the US
* pF: Pico-Farad, 1x10-12 Farad (1,000,000,000,000th of a Farad)
* mmF: Micro-Micro-Farad, another extremely old term, also still used
sometimes in the US

I think they will. Being able to punch in a frequency and get high quality audio without fading, static crashes, etc. will sell people -- who can afford it -- on the technology.

> I have played with DRM and
> I am very underwealmed. DRM radios consume much more
> energy, IE much shorter battery life, then analog.

This is mainly a question of how well integrated the radio chipsets can be made; very quickly you get to the point where powering the speaker itself will dwarf the energy consumption of the radio itself. I expect the actual DRM decoding can be done with well under 100mW, probably more like 10mW in the near future. These are power levels that are easily obtained via solar power.

> The greater radio complexity also promises
> greater user headaches.

I think it actually makes usage a lot simpler. What do you think's simpler to use.. a cell phone, or an amateur radio hand-talkie operating on 2m through a repeater autopatch?

I think the biggest stumbling block by far is going to be (1) getting broadcasters to adopt the technology and (2) getting people in places that have the most to gain from the receipt of such broadcasts the radios at a price they can afford.

potentially very expensive digital receiver."

I agree with you 100% -- hence the real challenge to make digital radios
dirt cheap. Interestingly, though, at a certain quality level digital
receivers actually become cheaper to build than analog receivers!

I bet a lot of listeners to, e.g., satellite radio in the U.S. and Europe would disagree with the assessment that digital radio doesn't benefit the listener.

But you do have to keep in mind that companies exist to make a profit. Unless you'd advocate that only governments should have broadcast rights, the market will insure that people 'get what they want' when it comes to broadcasts -- even if that does imply that the content is crap relative to what you or I might desire.

People have been able to punch in frequencies for an affordable price for about twenty years now. It's doubtful there's more SWLs now than there was back then.

Also, digital radio might not have the same fading and static crashes that analog radio has, but I can't imagine how digital radio can be free from dropouts and digital SW certainly can't fix the occasional dead propagation problem.

The same could be said for direct broadcast satellites. Such satellites
would provide highly reliable, clear sounding radio (or TV!}.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

I've never tried ground radials but it's worth a try. Would you still
run a short ground wire too?

It's amazing what you can hear when the conditions are just right. I
once heard the 5th harmonic of a Chinese domestic shortwave station on
25250. (5050 x 5). It was grey line reception in the morning a few
summers ago. This was when the solar flux was much higher than now. I
figure the power of that harmonic was less than 100-watts. The
propagation path was about 10K-miles.

That VOA site and others played a major role in winning the Cold war, so
I would think the current administration would gladly help to preserve
it.

2288. Special event station to commemorate Yalta Conference

Newsgroup: rec.radio.shortwave
Date: 2005-01-30 08:39:34 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cti6g6$ac1$1@hercules.btinternet.com>
Source record: 6237

Jan 26, 2005

Special event station EM60J will be on the air February 4-11 from Ukraine to mark the 60th anniversary of the Yalta Conference. The historic 1945 talks brought together the "Big Three" Allied leaders - Great Britain's Prime Minister Winston Churchill, US President Franklin D. Roosevelt and Russia's Joseph Stalin--to discuss post-World War II reorganization of Europe. The conference's primary purpose was to re-establish the nations that had been conquered by Nazi Germany, and one result was the partitioning of Germany into US, Russian, British and French zones. QSL via UU5JYA or direct to PO Box 378, Yalta 98600, Ukraine.

The so called 'handling' charge used to be included in the price of merchandise until some businesses decided they could make extra profit by charging a seperate handling fee in addition to shipping. This also allows them to lower the price of the merchandise and make up the difference with the handling charge. A really reputable company doesn't do this.

Just because a few Southern Democrats voted for Kerry does not mean that a liberal talk radio format will last long in the conservative South. I don't think this will last very long at all.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

Nope, but I have a Sony 7600GR I might be willing to sell you for $800.
There's nothing 'strange' about that price, mind you. I understand that
one once sold on Ebay for $850.

2305. Panasonic RF-2200 and RF-2600

Newsgroup: rec.radio.shortwave
Date: 2005-01-30 13:47:05 UTC
From: Unrevealed Source <Unrevealed_Source@nospam.net>
Message-ID: <YC5Ld.19634$2i5.16971@fe03.lga>
Source record: 6254

Greetings.

I'm keeping my eyes open for a good Panasonic RF-2200 on eBay. I'm in no hurry, so I'll just keep watching and the "right" one (great condition, that I can buy cheap) will certainly come along eventually. I just saw a nice one go for $127.

However, I'm also wondering about the RF-2600. Those also show up for sale from time to time. There is far less documentation and fewer reviews for this model, and I can't find a single side-by-side comparison. Is the 2600 the equal of the 2200 in terms of performance and build quality? If so, I would think that having the digital display would be a nice addition. If the radio quality has been downgraded, though, it wouldn't be worth it.

Knowledgeable ones, please advise. Thanks.

Jeff

It's like a racing boat (Sony) runing circles around a fishing boat
(Degen).
Both are SW receivers but the Sony does MUCH better in every aspect.
Although the Degen fits the bill at the low cost end.

I made a 15-meter dipole antenna out of some wire I unwound from the yoke of a junked-out television set, and strung it up near the ceiling. It's held in place with pushpins, too. Living on the third floor must help, I think. I've heard SW stations all over the world with this.

I just don't find this to be true. I owned both along with a 909 and a 1102. I did a rudimentary side by side test of all four one evening, each on a 75ft long wire. I found the following:

The 7600 synch detector offered only minimal improvement over the others. Negligible even.

The 909 and 1103 had slightly more sensitivity than the others.

The 909 was more selective than the Degens and about on par with the 7600.

The 909 is by far more ergonomic and straight forward to use than all of the others.

The test was done by tuning each through the same frequency range and logging all stations picked. Honestly the 1103 had a slight lead on overall sensitivity and the 909 and 7600 followed close behind.

Don't necessarily believe all the hype you hear about the 7600. It *is* a good radio but not necessarily better than the others mentioned. I sold my 1103 and 7600 and kept the 909 and 1102.

Best,
-Al A.

It can't, of course, but digital broadcasts can still sound perfect when the signal to noise ratio of the transmission is such that no human could make anything whatsoever out of a standard AM or FM transmission.

The same could be said for direct broadcast satellites. Such satellites
> would provide highly reliable, clear sounding radio (or TV!}.

Good point. I suppose some of the push for DRM is so that the terrestial broadcasters can actually compete with satellite radio, just as cable TV in the US has been forced to upgrade its services given the competition from the DBS services.

Long BUT Worth Reading.....
>Guest Column: No Relief in Sight for the Lincoln
> By Ed Stanton
>
>
> It has been three weeks since my ship, the USS Abraham Lincoln,
arrived off the Sumatran coast to aid the hundreds of thousands of victims
of the Dec. 26 tsunami that ravaged their coastline. I'd like to say that
this has been a rewarding experience for us, but it has not: Instead, it has
been a frustrating and needlessly dangerous exercise made even more
difficult by the Indonesian government and a traveling circus of so-called
aid workers who have invaded our spaces.
>
>
> What really irritated me was a scene I witnessed in the Lincoln's
wardroom a few days a go. I went in for breakfast as I usually do, expecting
to see the usual crowd of ship's company officers in khakis and air wing
aviators in flight suits, drinking coffee and exchanging rumors about when
our ongoing humanitarian mission in Sumatra is going to end.
>
>
> What I saw instead was a mob of civilians sitting around like they
owned the place. They wore various colored vests with logos on the back
including Save The Children, World Health Organization and the dreaded baby
blue vest of the United Nations. Mixed in with this crowd were a bunch of
reporters, cameramen and Indonesian military officers in uniform. They all
carried cameras, sunglasses and fanny packs like tourists on their way to
Disneyland.
>
>
> My warship had been transformed into a floating hotel for a bunch of
trifling do-gooders overnight.
>
>
> As I went through the breakfast line, I overheard one of the U.N.
strap-hangers, a longhaired guy with a beard, make a sarcastic comment to
one of our food servers. He said something along the lines of "Nice china,
really makes me feel special," in reference to the fact that we were eating
off of paper plates that day. It was all I could do to keep from jerking him
off his feet and choking him, because I knew that the reason we were eating
off paper plates was to save dishwashing water so that we would have more
water to send ashore and save lives. That plus the fact that he had no
business being there in the first place.
>

>
> My attitude towards these unwanted no-loads grew steadily worse that day as I learned more from one of our junior officers who was assigned to escort a group of them. It turns out that they had come to Indonesia to "ass ess the damage" from the Dec. 26 tsunami.
>
>
> Well, they could have turned on any TV in the world and seen that the damage was total devastation. When they got to Sumatra with no plan, no logistics support and no five-star hotels to stay in, they threw themselves on the mercy of the U.S. Navy, which, unfortunately, took them in. I guess our senior brass w as hoping for some good PR since this was about the time that the U.N. was calling the United States "stingy" with our relief donations.
>
>
> As a result of having to host these people, our severely over-tasked SH-60 Seahawk helos, which were carrying tons of food and water every day to the most inaccessible places in and around Banda Aceh, are now used in great part to ferry these "relief workers" from place to place every day and bring them back to their guest bedrooms on the Lincoln at night. Despite their avowed dedication to helping the victims, these relief workers will not spend the night in-country, and have made us their guardians by default.
>
>
> When our wardroom treasurer approached the leader of the relief group and asked him who was paying the mess bill for all the meals they ate, the fellow replied, "We aren't paying, you can try to bill the U.N. if you want to."
>
>
> In addition to the relief workers, we routinely get tasked with hauling around reporters and various low-level "VIPs," which further wastes valuable helo lift that could be used to carry supplies. We had to dedicate two helos and a C-2 cargo plane for America-hater Dan Rather and his entourage of door holders and briefcase carriers from CBS News. Another camera crew was from MTV. I doubt if we'll get any good PR from them, since the cable channel is banned in Muslim countries. We also had to dedicate a helo and crew to fly around the vice mayor of Phoenix, Ariz., one day. Everyone wants in on the action.
>
>
> As for the Indonesian officers, while their job is apparently to encourage our leaving as soon as possible, all they seem to do in the meantime is smoke cigarettes. They want our money and our help but they don't want their population to see that Americans are doing far more for them in two weeks than their own government has ever done or will ever do for them.
>
>

> To add a kick in the face to the USA and the Lincoln, the Indonesian government announced it would not allow us to use their airspace for routine training and flight proficiency operations while we are saving the lives of their people, some of whom are wearing Osama bin Ladin T-shirts as they grab at our food and water. The ship has to steam out into international waters to launch and recover jets, which makes our helos have to fly longer distances and burn more fuel.
>
>
> What is even worse than trying to help people who totally reject everything we stand for is that our combat readiness has suffered for it.
>
>
> An aircraft carrier is an instrument of national policy and the big stick she carries is her air wing. An air wing has a set of very demanding skills and they are highly perishable. We train hard every day at sea to conduct actual air strikes, air defense, maritime surveillance, close air support and many other missions - not to mention taking off and landing on a ship at sea.
>
>
> Our safety regulations state that if a pilot does not get a night carrier landing every seven days, he has to be re-qualified to land on the ship. Today we have pilots who have now been over 25 days without a trap due to being unable to use Indonesian airspace to train. Normally it is when we are at sea that our readiness is at its very peak. Thanks to the Indonesian government, we have to waive our own safety rules just to get our pilots off the deck.
>
>
> In other words, the longer we stay here helping these people, the more dangerous it gets for us to operate. We have already lost one helicopter, which crashed in Banda Aceh while taking sailors ashore to unload supplies from the C-130s. There were no relief workers on that one.
>
>
> I'm all for helping the less fortunate, but it is time to give this mission to somebody other than the U.S. Navy. Our ship was supposed to be home on Feb. 3 and now we have no idea how long we will be here. American taxpayers are spending millions per day to keep this ship at sea and getting no training value out of it. As a result, we will come home in a lower state of readiness than when we left due to the lack of flying while supporting the tsunami relief effort.
>
>
> I hope we get some good PR in the Muslim world out of it. After all, this is Americans saving the lives of Muslims. I have my doubts.
>
>
> Ed Stanton is the pen name of a career U.S. Navy officer currently

serving with the USS Abraham Lincoln carrier strike group.

Source record: 6278

For the money the DE1103 gives good performance. Within major broadcast bands it delivers many signals and the dual filter helps in some situations. And is does a good job of retrieving hams signals too. It is quite compact and the ergonomics are good although not at the 7600 level. The tuning knob is a distinct plus for a radio in this price range and makes band scanning fun.

There are a few shortcomings you should be aware of.
1. Ihe receiver generates numerous image signals 900khz down. Thus much of the 6mhz band is repeated in an area where there are potentially some interesting nonbroadcast catches. Same goes for the 9mhz band generating images in the interesting 8.8 segment where international aircraft may be heard.

2. The usefuless of the 255 memories in the 1103 are compromised in 2 ways. A. Degen decided to use hexadecimal numbering for it's memories. While confusing to many, this scheme also means the keypad is useful for only certain groups within the 255 memories. B. The memory retreival feature has a serious bug when used on FM and MW. When a stored channel is retreived from FM, the firmware also retrives the highest numbered memory used for MW. Likewise for retrieving MW stations. For those of us who flip between bands it means having to continuall retune the other band.
3. The signal strength meter for some reason does not work on FM as it does on virtually every other multiband radio I'm aware of.

I've owned one for about a month now and do enjoy it. It is not perfect nor is it a replacement for the 7600 or the YB as some have claimed.

BPL might be beaten, but it's going to be years in the fighting.
Many of us are going to be buried before victory over all
the money in this fight. In the mean time, we need a
work-around like that I proposed (and was rounded condemned for).
If you are one of the guys buried, I'd think a work-around
that allows you to continue using your equipment would be
a blessing, but I guess not.

>
> I've never tried ground radials but it's worth a try. Would you still
> run a short ground wire too?

Per above, my 4:1 Balun/coax-feedpoint is already attached/connected directly to a ground rod, not just near one. The radials will both be part of common ground already, their tie-point at the same ground rod that the feedpoint and Balun are attached to. Radials are normally shallow-buried, both for protection and to minimize pickup of yet more noise. It's a lot of work to bury long radials, so I will first just lay them out along the surface, then experiment with various coastal stations to determine if there is any gain from the radials.

Due to the lightning protection design at my station, any new ground radials also have to be bonded to the station ground and AC service entry ground, the entire system is common-bonded. Because it's winter time and small likelihood of lightning (we had a nearby strike during a snowstorm 2 weeks ago!) I will wait to add the bonding conductors until after the antenna is tested for any possible xmit/receive improvements. Those bonding connectors will have to run 90 degrees from the end of each of the two new radials, and they may also alter the radiation pattern of the antenna. I'll let you know how that works out.

Then, for SW digital broadcast radio to be successful, the listeners will
still have to accept the unreliability of SW.

Reliable communications have never been cheaper, and they will get much
cheaper yet. I think the day will soon come when SW radio won't be the
first choice for any business or government worldwide communication.

The SW spectrum will only be useful for emergency communications and radio
hobbyists. Ideally, SW would be administrated by an agency something like
the National Park Service. Benign neglect would also be OK.

I'm not convinced the average radio listener cares much about fidelity.
Neither AM nor FM stations normally approach their fidelity limits, but
those stations seem to be attracting listeners just fine. Satellite's
appeal seems to be it's wide range of programming. Digital radio might
support a larger number of channels for the terrestrial broadcasters. I

think Clear Channel might be thinking that all those IBOC channels they plan to install can be used as a sort of super-SCA scheme, if IBOC radio falls flat.

Democracy doesn't exclude any Party.
What it excludes is their ability to hijack a political process by giving
the
People the power to vote them out.

That is something NO existing Communist Party presently in control of
countries like China and N.Korea could survive. That is why the Communist
Party strongly oppose democracy.

If a country like Iraq can successfully pull off any resemblance of a
democratic election
it sends an extremely strong signal to Communist nations such as China.

I can read the minds of the populace in China right now upon hearing the
election news
in Iraq - "If Iraq can do it why not us?"

What is so hypocritical of the Democrats is that Bush lost by far smaller
margins
than Kerry in states such as Wisconsin and, I believe, Washington as well as
a couple other
states.

Be careful what you ask for, should be the Democratic Party mantra in
regards to disputed
Kerry votes.

2356. Re: Degen DE1103 vs. Sony ICF-SW7600GR

Newsgroup: rec.radio.shortwave
Date: 2005-01-30 19:52:56 UTC
From: tianli <look@china.org>
Message-ID: <10vqetnaskuj533@corp.supernews.com>
Source record: 6355

> Can anyone tell me the differences, opinions... between that receivers
> (Degen DE1103 and Sony ICF-SW7600GR)?

The Degen is made in China by a Communist Party owned factory.
The 7600GR is made in Japan by a free enterprise company.

The Degen ergonomics S.u.c.k.s. which will make you curse every penny you spent on it every time you attempt to operate it.
The 7600GR ergonomics are superb.

Repairs or replacement parts are non-existent for the Degen.
Sony parts and repair and relatively easy to acquire.

A technical manual does not exist for the Degen
Sony technical manuals are easily obtained.

If the Degen breaks toss it in the trash. Spend more money for another receiver.
The Sony 7600GR is relatively well built and is repairable. But is less likely to need repair.

You get what you pay for!

I was left here wondering why they'd hold a memorial service for the Kursk in
July anyway. It did go down in August of that year as I recall.

The best bang for your buck with this radio is to buy a dozen and
then send them all to "anybody" in North Korea.

I would like to add that I have the greatest respect for those who leave their homes and go down to sea as many have done in the past. I have even greater respect for those who leave their homes and actually go under the sea.

May those who perished onboard RNS Kursk always rest in peace.

maybe this will help

base unit one farad
millifarad = 1/1000 farad or a thousands of a farad (seldom used for
capacitors)
microfarad = 1/1,000,000 farad or a millionth of a farad

unfortunate the mixup of the prefixs "m"

In some measurements such as current
.001 amp is expressed as one mA m meaning milli
.000001 amp is expressed as one uA u meaning micro

So back to your original question - you need to ascertain the use of m
A 50,000 millifarad is a whopping capacitor and not likely
So it was probably 50,000 microfarads

Hope that helps

I have several problems with what you posted.

I have not seen a poll of SW listeners who have compared DRM to analog.
What poll are you referring too?

The majority of the SW broadcasters are not for profit national arm of
their respective governments so this has nothing to do with private
companies or the profits they make.

If you take a careful look of the DRM system, you will understand that
the first order benefit is a reduction in electrical costs to the
broadcaster. Like any anything though there is a down side even to this
main and as far as I can tell only real benefit to either broadcaster or
listener and that is that the broadcaster must then transmit at lower
power. This transmission mode is not supposed to require as much power
as analog for good reception. The result will be lower signal levels at
the listeners radio. This will make the transmission more difficult to
decode with good quality.

The big picture is even worse when you consider that the listeners radio
must now be more complex and require more power to operate. New radio
receivers will cost more and will cost more to operate. Almost all the
existing radios from the beginning of SW broadcasting to now will be
obsolete and the rest converted at no small cost.

The listener will not benefit in any way over analog if the broadcast
power is reduced so that the broadcaster will be able to derive the only

real benefit of the DRM system. The signal that could have been clearer and free from interference will degrade and instead of being noisy on an analog receiver will cut in and out on a digital unit.

Under any but the ideal conditions of very good signal to noise the DRM receiver will cut in and out. This behavior is much worse to most individuals than the analog fading on current receivers so this is just an example of different tradeoffs in the system design instead of DRM being a better system.

I could go on and on about the pros and cons of DRM to analog but the end result is no better or actually worse for the listener.

The listener will likely have to replace their current radio. The new radios will cost more money than the current radio. The current or new listener will have to spend more money for a radio and spend more money to operate it because it will consume more power. The listening situation will be different from analog where some aspects will be an improvement at the cost of different set of downsides. The net result will not be better then analog just different.

The broadcaster still has to buy the same size transmitters because the DRM system requires tremendous overhead capacity so that cost does not change. The transmitter modulation subsystem is more complex and a little more costly than analog. The engineering costs are a little greater because keeping all the transmitter parameters within very tight limits so it does not splatter across the band is more difficult to maintain then analog. The broadcaster has to transmit a weaker signal to reap the one real benefit of the DRM system where the listeners antenna and radio will have to deal with that weaker signal.

All that said the thing that ticks me off about the DRM consortium is that they lie about the system. The claim that the encoding, decoding system is open is as false as the real benefit will turn out to be if DRM is implemented as envisioned.

It looks like everyone on this thread has top posted so I will just so
it continues to make sense. I did fix some of the broken formatting.

There is no problem laying the wire on the roof as long as it not near
any significantly long conductors. The impedance of the wire will be a
little lower than if it was hanging in mid air. The impedance of the
wire will drop much lower if it and the roof are wet, which will not
present a problem for receiving.

I would not use this as a transmitting antenna. It is a worse situation
when the roof is wet but even dry you are heating your roof with the RF
energy and this could start a fire if enough power is used.

> run a short ground wire too?

If a ground wire is not short it will not behave as if it is connected
to ground period.

The problem is that a wire has inductance. The value of inductance is based on the diameter of the wire or cross sectional area for other shapes over its length. The smaller the cross sectional area is or the longer the wire the is the higher the inductance of that wire.

The inductance of the wire will become a greater problem at higher frequencies and less of a problem the lower in frequency you want to operate on because the reactance of the wire always increases with frequency.

Since you want the wire to behave as a ground connection you have to calculate its self inductance and then its inductive reactance at the highest frequency you want it to behave as a ground connection.

If you don't want to calculate it then make it as short as practical. If the connection turns out to be more than a few inches in length then use three inch minimum width copper tape instead of wire.

I didn't say that. I sure hope it's not true, but I think it probably is. I'm just sick of "news" being spread around without people looking into it beforehand, and with every blurb written that makes "the other guy" look bad being accepted at face value. That goes for both sides of the aisle. Saying "spread it around" and -then- essentially saying "I wonder if it's true" is the kind of mentality that makes sites like scopes.com a necessity. That might not be quite what tianli meant, and I'm not trying to bust his chops here...just making a point. Look at all of the off-topic articles that are quoted in their entirety here, and then ask yourselves how much fewer of them we'd see if they were either vetted for accuracy or weren't simply opinion pieces. I'm admittedly over-sensitive about it today; in a related vein, I've got relatives that lately insist on sending me every freaking internet e-mail rumor in existence, despite all of my (to this point) polite efforts to get them to stop and think before they spam everyone in their address book with them. Believe it or not, there are still people out there that believe Bill Gates will send you to Disneyland if you help him track how e-mail spreads. <sigh>

Hi Terry,

VOX is a key feature of RecAll Pro (and the standard RecAll program) found at www.sagebrush.com The software allows for various configuration options of VOX, too.

It's an excellent, easy to use program that's very useful for scanner enthusiasts, DXers, and the like. In fact, RecAll Pro is the basis of my hard drive recording techniques article in February's Monitoring Times magazine.

I don't mention the VOX feature in my article, but other capabilities are discussed. I particularly like the running time/date stamp in RecAll Pro that allows it to be set to UTC.

2385. Re: Degen DE1103 vs. Sony ICF-SW7600GR

Newsgroup: rec.radio.shortwave
Date: 2005-01-30 22:12:13 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <Y%cLd.21361$so3.12283@fe03.lga>
Source record: 6384

I am very pleased with my 1103. I have owned three different 7600gr radios and I just wasn't impressed. The 1103 has a much better sounding speaker. Plus, the 1103 has a tuning knob but it still maintains the advantages of being a digital radio.

To me, I have arranged the memories on 1103 in sequential order: MW to SW to FM. When I need to access a particular frequency, I just give knob a spin or two and I'm there. I've never found a reason to access any memory directly, so it really doesn't matter to me if a memory is named 1c or 23.

A previous poster claimed that "the memory retrieval feature has a serious bug when used on FM and MW. When a stored channel is retrieved from FM, the firmware also retrieves the highest numbered memory used for MW."

That's not quite right on my 1103 anyway. What I have observed is that the radio remembers the last frequency tuned on each of its 12 bands. That means that when you switch from one band to the other, the radio tunes to the last station you listened to on that particular band. To me, that's a pretty nice feature.

Don't get me wrong. I don't think the 1103 is the best radio made. I have others that I like better, depending upon my mood. But for my needs and tastes, the 1103 comes closer to perfection than did the 7600gr.

2386. Re: Degen DE1103 vs. Sony ICF-SW7600GR

Message-ID: <i4OdnfxxOcBlwWDcRVn-uw@comcast.com>
Source record: 6385

I'm in agreement with these comments. My 1103 has very impressive performance for the price. It's the only portable I've ever used that could pull in CHU 3.330 MHz on the whip antenna alone, indoors, from here on the West Coast of the US. It's also delivered a handful of the 90 and 60 meterband Indonesians on the whip alone.

The Degen DE1103 Yahoo Group has lots of messages and information about this portable to help you make an informed choice.

Guy Atkins
Puyallup, WA USA

<hjsjms@cs.com> wrote in message
news:1107106756.336719.228640@f14g2000cwb.googlegroups.com...
For the money the DE1103 gives good performance. Within major broadcast bands it delivers many signals and the dual filter helps in some situations. And is does a good job of retrieving hams signals too. It is quite compact and the ergonomics are good although not at the 7600 level. The tuning knob is a distinct plus for a radio in this price range and makes band scanning fun.

There are a few shortcomings you should be aware of.
1. Ihe receiver generates numerous image signals 900khz down. Thus much of the 6mhz band is repeated in an area where there are potentially some interesting nonbroadcast catches. Same goes for the 9mhz band generating images in the interesting 8.8 segment where international aircraft may be heard.

2. The usefuless of the 255 memories in the 1103 are compromised in 2 ways. A. Degen decided to use hexadecimal numbering for it's memories. While confusing to many, this scheme also means the keypad is useful for only certain groups within the 255 memories. B. The memory retreival feature has a serious bug when used on FM and MW. When a stored channel is retreived from FM, the firmware also retrives the highest numbered memory used for MW. Likewise for retrieving MW stations. For those of us who flip between bands it means having to continuall retune the other band.
3. The signal strength meter for some reason does not work on FM as it does on virtually every other multiband radio I'm aware of.

I've owned one for about a month now and do enjoy it. It is not perfect nor is it a replacement for the 7600 or the YB as some have claimed.

Wrong. Bush supporters appeared to live in an alternative universe.

Friday, October 22, 2004
Bush supporters are wildly misinformed.

ï¿½ 75% believe Iraq was providing substantial support to al Qaeda.

ï¿½ 74% believe Bush favors including labor and environmental standards
in agreements on trade.

ï¿½ 72% believe Iraq had WMD or a program to develop them.

ï¿½ 72% believe Bush supports the treaty banning landmines.

ï¿½ 69% believe Bush supports the Comprehensive Test Ban Treaty.

ï¿½ 61% believe if Bush knew there were no WMD he would not have gone to
war.

ï¿½ 60% believe most experts believe Iraq was providing substantial
support to al Qaeda.

ï¿½ 58% believe the Duelfer report concluded that Iraq had either WMD or
a major program to develop them.

ï¿½ 57% believe that the majority of people in the world would prefer to
see Bush reelected.

ï¿½ 56% believe most experts think Iraq had WMD.

ï¿½ 55% believe the 9/11 report concluded Iraq was providing substantial
support to al Qaeda.

ï¿½ 51% believe Bush supports the Kyoto treaty.

ï¿½ 20% believe Iraq was directly involved in 9/11.

The basic principles of progressivism are:

Social safety net
Those that work hard and play by the rules should receive a decent
standard of living, as well as freedom, security, and opportunity.
Democracy
Minimize concentrations of political, corporate, and media power so
that individuals have a stronger voice in their government. Publicly
finance elections to reduce the influence of wealth in the political
process. Improve public education, especially in civics and history so
that more citizens can take part in the political process. Bring
corporations under stakeholder control, not just stockholder control.
Larger role for government
Government provides public services that the private sector cannot or
is not doing effectively, or ethically. Government should promote and,
if possible, provide greater democracy, more freedom, a better
environment, broader prosperity, better health, greater fulfillment in
life, less violence, and the building and maintaining of public
infrastructure.
Ethical business sector
In the course of making money by providing products and services,
businesses should not adversely affect the public good, as defined by
the above values.

Foreign policy
The same values governing domestic policy should apply to foreign policy whenever possible.

Typical elitist, snobbish liberal take on anyone they disagree with.
"They don't agree with me because they are to stupid to understand
complex ideas."

Typical fare from Tom Betz, the talking ass of RRS.

Hope is not a part of the Air America broadcasts.

Freedom means marching backward according to Air America.

Whether or not one agrees with the point of view expressed it was not
entertaining. Air america has sucked every time I tuned them in. Lame
humor and a rehash of tired, unrealistic, unworkable liberal ideas is
not entertaining in my view.

Progressive is a term used by people of the liberal persuasion to
re-qualify unrealistic, unworkable and just plain dumb ideas as
something other than what they are.

You have been brainwashed since childhood by corporate mindfuckers
into doing their bidding. You have sold the country out.

There is nothing the least bit patriotic about defending megapirates
as they rob us blind, and it is quite patriotic to point out that we
are being robbed and lied to.

You wouldn't know a real conservative if you tripped over one.

>
> Mark Zenier mzenier@eskimo.com Washington State resident

That's not what I see in most articles or catalogs.
1 F is 1 farad
1 mF is .001 or 1x10^ -3 or 1 milli-farad
1 uF is .000,001 or 1 x 10^ -6 or 1 micro-farad
1 nF is .000,000,001 or 1 x 10^ -9 or 1 nano-farad
1 pF is .000,000,000,001 or 1 x 10^ -12 or 1 pico-farad

Many capacitors are in mF in industrial power supplies. Got to get the
current step response down to < 20 Hz in some cases.

"tianli" <look@china.org> wrote in
news:10vqecnh00fe74d@corp.supernews.com:

Personally, it was the choice between tweedle dee and tweedle dumb. What concerns me is that the possibility of actually having a decent candidate from either party making it to the primary is nil to none. All of the future elections will assuredly be determined years before the election.

I had to return some defective software recently, and I wrote to the company explaining my situation. They said to return it, and the would replace the defective disk, free of charge. Months later, I still hadn't received the replacement disk, I again wrote to them. They said that they had no record of receiving the disk and asked for my proof that I had mailed it to them.

I copied verbatim their instructions to me concerning returning the disk, and I e-mailed them again. No where in their instructions did they specify that I should obtain a receipt for the return mail. I also informed them that I had bought a couple of hundred dollars worth of software from them, as well as cables and the like. I also told them that I had to send multiple e-mails to them to get them even to respond. I added that the disk was defective (the drive spent 15 minutes reading and re-reading the disk, but it finally loaded), but that I had successfully loaded the program onto my system.

I went on to explain that I had a functioning program, was a good customer, had written multiple times about my problem, and that it wasn't part of a vast Right Wing conspiracy to obtain a disk from them that their records would clearly show that I already had. When they finally sent the replacement disk, the paperwork was initialed for every step of processing by a supervisor, to show that the disk was being sent without cost.

What is my fucking point, you are no doubt asking? My point is that we are being asked to vote by electronic methods using a system that gives no receipts. If a lousy $35 dollar disk caused so much problem for the lack of a receipt, why should something as serious as voting be done by a method that precludes serious challanges to the results. Bush received 3000 votes more (in Ohio) than Kerry in an area where only 800 people voted. When discovered, they said that the machine should have read 300 votes for Bush, not 3000, and corrected the, ahem, mistake. How many areas did this happen that no one noticed the discrepency?

Don't get me wrong, I work in heavy industry, and I tire of the Democratic mantra at election time of "vote early and vote often". Elections have been rigged before, but it would be nice to see the

Citizens actually determine the results for a change. But people cannot
make educated choices when we are spoon fed by the media.

.................etc,

Soliloquy

I was able to get about half way through reading this and had to stop.

There are people that are of real help and there are those that are
not.

The UN and news crews are not there to help people. The UN people are
there out of self importance and living off the backs of others. The
news crews are there to record and broadcast the devastation as a way
to make a living.

Both groups should never have been allowed on military ship as their
support base. The only time either group should be on board is in
support of the ships mission not the other way around.

I downloaded and installed RecAll Pro.
It has what appears to be a standard
level sensing VOX switch. Unless I am
missing something.

One implementation, in hardware, can be seen at:
http://www.qsl.net/kc7bum/hf_squelch.html
This is a very usefull device, but I am looking
for a way to do it in software.

Subject: Voice detection software?

Lou,

Voice squelches for HF are typically "syllabic squelches". They do not
react on noise but on the pattern of the signal. Simple hardware based
ones
try to detect the presence of voice (low frequency syllabic variations
associated with voice). Although not perfect, these types of squelch
circuits are fairly common on commercial and military HF equipment.

Noise based squelches are practically unusable on HF as they are
triggered
by any random noise... and as we all know, HF-AM/SSB sure isn't FM ;-)

However, I agree that it would be an interesting project if someone
created
a software-based syllabic squelch application that can be used with any
radio... any takers? ;-)

Bruno,

Terry

Source record: 6307

At a former job we HAD to receive WWV (10 or 15MHZ).
It was winter and icy, so all I was willing to do was "toss"
a wire on our flat roof. We were in the old university gym,
with a large, flat roof. About 100'X200'. I ran the wire
lengthwise. The roof was wood, covered by several
layuers of tar, paper and gravel. The antenna worked
well enough to "get by" but the first day the roof was clear,
I errected a better antenna, by elevating the wire on 10'
EMT sections. It was a difference like night and day.
The only change was the elevation. So, while an antenna
will work laying on the roof, it will work much better up in the
air over that roof. The electric shop was very unhappy to
have to install 2 ~60' wire to 8' ground rods.
Whne we took the antenna down 12 years later, internet
time services made WWV old hat, I scavenged the wire,
ground were and rods and the EMT and fittings. I was told to
remove that "old stuff" and "throw it away". It went into my
car. I used (and still use) the ground rods and heavy copper
ground wire, and still have the antenna wire rolled up. I hope
to errect it after I retire and "move to the country". We bought
the good, heavy hard cooper wire and they paid big bucks to
get it there the next day.

well, there's some bull shit there!

The only objection I have to the 1103 ergonomics is the volume control.
Yep, it can be a pain, but otherwise the radio is really fun to use. I
never curse the 50 odd bucks I paid for it.

The 7600's ergonomics are fine, but a far cry from superb. Where's that
tuning knob again?

You probably can't get a Degen repaired. You probably don't want to pay
Sony to fix your 7600; they'll charge you as much as you paid for it and
you'll probably have to send it back a few more times for them to do it
right. I've had nothing but bad luck with Sony service. You'd feel a lot
worse throwing your $150 Sony away than the $50 Degen. Anyway, both are
pretty reliable.

Sony doesn't seem to want to be in the manufacturing business any more;
they'd rather make the big bucks selling content.
They treat their product customers like crap, and that's not what I want to
pay for!

on
> > a day-to-day basis
> > than a one time radiopurchase!

I have a little revelation for you. Chinese profits from foreign companys
manufacturing
products in China is a very small fraction of the foreign company profits.
Miniscule in fact.
The reason the Communist government encourages this is because there are
more people
unemployed in China then there are employed in the U.S. The Communist Party
would
be facing more social unrest if unemployment gets any worse.

What you need to avoid are Chinese products made by and sold by Chinese
companys.
I.E. Companys owned by the Chinese Communist Party = Degen!

David <rickets@knac.com> wrote in
news:faoqv0lacm1h30n3bbkpraoc0qk34o2su7@4ax.com:

Perhaps my lunacy is showing, but personally I think that this is the sole reason that the U.S. Government is pushing so vehemently for BPL. Since connections to the power receptacles will allow your computer to communicate with the world, so too would the same connection allow any device, if so designed, to communicate. Your TV and clock radios will be spying on you. In theory, to a limited degree (TV's and Cable Boxes), cable ISPs would also offer this feature, but even though not everyone has cable, virtually (with the exception of the Amish), everyone has electricity.

If you have followed the debate, FEMA originally opposed BPL due to the possible interference with emergency level communications, but they later changed their mind (or had it changed for them).

BPL is an answer looking for a problem.

Soliloquy.

Unfortunately for you, there are very competent independent repair avenues
for most Sony SW portables.
Even those that have been discontinued for years.

> You'd feel a lot
> worse throwing your $150 Sony away than the $50 Degen. Anyway, both are
> pretty reliable.

"Made in Japan" Sony products are very reliable.
There is no such thing as Zero defects in the manufacturing business.

>
> Sony doesn't seem to want to be in the manufacturing business any more;

I would to if I had to compete with slave labour from a communist country.

> They treat their product customers like crap, and that's not what I want
to
> pay for!

And how does the Dingy company treat you? Oh, you don't know, huh?
Because you can't unless you speak Chinese - LOL!

BTW: Please name me one Chinese designed and manufactured SW radio product
by Dingy that introduced a first inovative feature?

Go ahead, contribute to the CCP coffers, then don't complain about Iraq.

Please read the thread.
I am not after a level sensing VOX,
I am after a program that only responds
to human voice.
ScanRec is a great program.
And on a FM comm system,
with decent radio squelch performs
very nicely.
But I am after a Voice Operated as
opposed to signal operated squelch.

Terry

I suppose so, although I think it's safe to do that, in many areas, the reliability is a very slowly changing function (i.e., dependent much more on something like the sunspot cycle rather than local atmospheric conditions).

The bottom line is that digital broadcasting can make SW more reliable than it is now. True, it will never approach the 'realiability' of a local broadcaster, but presumably the typical use of SW (excluding hobbyists for a moment) is when the local broadcasts are either unavailable or considered to be too heavily influenced by the local government.

> Reliable communications have never been cheaper, and they will get much
> cheaper yet. I think the day will soon come when SW radio won't be the

Yes.

> The SW spectrum will only be useful for emergency communications and radio
> hobbyists.

I'd wager that the users of the HF spectrum for free e-mail services such as Winlink 2000 won't go away any time soon either. :-)

> I'm not convinced the average radio listener cares much about fidelity.

I think they care a lot about fidelity, but not how you'd typically measure it. To the average person, static or fading is far more annoying than heavy compression artifacts (that abount on XM and Sirius) or even short dropouts.

> Satellite's
> appeal seems to be it's wide range of programming.

True.

Hi Telamon,

"Telamon" <telamon_spamshield@pacbell.net.is.invalid> wrote in message
news:telamon_spamshield-FB353F.12561630012005@newssvr13-ext.news.prodigy.com...
> I have not seen a poll of SW listeners who have compared DRM to analog.
> What poll are you referring too?

I don't. I said, 'I bet...' but that doesn't imply I actually have any
proof. :-) It's just my opinion.

> The majority of the SW broadcasters are not for profit national arm of
> their respective governments so this has nothing to do with private
> companies or the profits they make.

Fair point. Still, in -- most -- countries the government respects the will
of the people to some reasonable degree, and as such the broadcast content
will change similarly.

> If you take a careful look of the DRM system, you will understand that
> the first order benefit is a reduction in electrical costs to the
> broadcaster.

I'm thinking that the same effective range can be achieved for less power,
OR one can keep the same (average) output power and increase their range a
skosh.

>This transmission mode is not supposed to require as much power
> as analog for good reception. The result will be lower signal levels at
> the listeners radio. This will make the transmission more difficult to
> decode with good quality.

It's a digital mode with plenty of error correct, so the quality of
reception will fall off VERY rapidly with a dropping signal to noise ratio.
Again, for the _same_ power, DRM will provide _better_ reception quality for
the listener.

> The big picture is even worse when you consider that the listeners radio
> must now be more complex

Yes, although it all gets boiled down into an IC or two these days anyway.

> require more power to operate.

Not at all necessarily. As I mentioned last time, the processing
requirements are not so great that it isn't reasonable to figure that --
after a couple of generations of receiver chipsets-- the decoding power
requirements will be negligible compared to speaker amplifier requirements,
so the power 'issue' then only becomes a potential problem for Walkman-style

radios.

(BTW, satellite radio in the US -- XM and Sirius -- are on about generation #3 of receiver chipsets now, and they've just started introducing would-be Walkman-style radios. They're not much to write home about yet, but give'em another year or two and I think they'll have it.)

> New radio
> receivers will cost more

Not necessarily. Digital processing is a lot cheaper to implement than analog processing -- besides performance, there's a cost reason that good car stereos now digitize at IF and 'do the rest' digitally, and cell phones have always tried to push the digital processing as close to the antenna as possible.

> and will cost more to operate.

Only if they use more power...

> Almost all the
> existing radios from the beginning of SW broadcasting to now will be
> obsolete and the rest converted at no small cost.

Yes, although it's not like that's going to happen overnight. In the USA, HDTV is taking decades to surplant the old NTSC system, and the same is surely going to be true of digital radio broadcasts (although perhaps not _quite_ as long, as radios cost a lot less than TVs to replace).

> The listener will not benefit in any way over analog if the broadcast
> power is reduced so that the broadcaster will be able to derive the only
> real benefit of the DRM system. The signal that could have been clearer
> and free from interference will degrade and instead of being noisy on an
> analog receiver will cut in and out on a digital unit.

If the broadcasters choose to cut their power, that's a possibility. But I don't see why the broadcasters would tend to do that?

> Under any but the ideal conditions of very good signal to noise the DRM
> receiver will cut in and out. This behavior is much worse to most
> individuals than the analog fading on current receivers so this is just
> an example of different tradeoffs in the system design instead of DRM
> being a better system.

Digital transmissions finally cut out well after an analog transmission is completely undecipherable. I think most people prefer brief 'cut outs' to, e.g., fading and static crashes, but I suppose that's largely a matter of personal preference and I don't have a very large sample size.

> I could go on and on about the pros and cons of DRM to analog but the
> end result is no better or actually worse for the listener.

OK. :-) I guess we'll see how it plays out... you tend to make certain assumptions about broadcasters' and listeners' behaviors that are different

from mine.

[a bunch of somewhat repetitious stuff deleted, not that I think it's
invalid, but rather I don't have the time to address it right now]

> All that said the thing that ticks me off about the DRM consortium is
> that they lie about the system. The claim that the encoding, decoding
> system is open is as false as the real benefit will turn out to be if
> DRM is implemented as envisioned.

I'd agree with you there. Unfortunately the same thing has happened on the
amateur radio bands -- digital modes such as Pactor III just barely squeek
by the FCC definition of being 'documented,' yet trying to implementing the
decoding/encoding algorithms onesself is nigh impossible.

Where does this particular model fall into the scheme of things? Today I picked one up at my local flea mkt for $25. It works but all switches and knobs are extremely scratchy. Needs some TLC and is missing the AM/SSB knob but works otherwise. Also picked up a Drake SSR-1 in XLNT condition that works amazingly well. The guy wanted $30 but I talked him down to $20. He thought it was a CB radio. LOL For an analog readout, this Drake is spot on. I have lots of other boatanchors and have never seen one with such accuracy. With the way it tunes, I suspect that it is a "Wadley loop" type radio. BTW, I thought Drakes were made in Ohio. This SSR-1 has "Japan" stamped in the metal case...

I did not want this thread to be overly long but it is getting there. I
think that most of your replies are assumptions on the progress of
silicon being generated specifically for DRM receivers and that is going
to cost money. Even with the Asicss for the horse power to all the work
in a DRM receiver it seems likely to me that it will require more power
than an analog set. It is not reasonable to assume otherwise.

The DRM consortium is not playing straight with the public and this
makes any claims suspect in my eyes, certainly the ones that imply
slight of hand techniques like the power reduction on the broadcaster
side and at the same time maintain that reception will be better. I do
not believe it. I will need proof and so far, it is not forth coming.

The wire's measured impedance at the opperating frequency was about 100
ohms. 10 watts at 100 ohms gives less than half an amp. I wouldn't be to
concerned on an asphalt roof.

2434. Radio-Mart Latest Feedback

Newsgroup: rec.radio.shortwave
Date: 2005-01-31 03:21:36 UTC
From: patgkz <patgkz@new.rr.com>
Message-ID: <AthLd.138072$NO5.27145@twister.rdc-kc.rr.com>

Oh no! The latest feedback from an apparently disgruntled customer of Dear Martyn:

" Said was mint - in fact was scratched, dented, w/crude mods and didn't work! "

Say it ain't so........!

2435. What's the 'quietest' receiver you've ever owned or used?

Newsgroup: rec.radio.shortwave
Date: 2005-01-31 03:37:29 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1107142649.528028.112840@c13g2000cwb.googlegroups.com>
Source record: 6328

I started thinking about this tonight. I was tuning around with a Lowe HF-150, comparing it with some other receivers, and was struck by how quiet the 150 is--and by what an advantage this is when it comes to resolving weak AM signals.

So, just out of curiosity, what's the quietest receiver you've used and/or owned?

2436. Repair/alignment of Sony ICF-2001/2010

Newsgroup: rec.radio.shortwave
Date: 2005-01-31 03:53:55 UTC
From: Tebojockey <"tebojockey secure-tunnel com">

Source record: 6329

Hi all,

Can anyone recommend a person or service center in the US that can repair/align a Sony ICF-2001/2010 that is aging? I have visited the Sony site and they have nothing there that even refers to it, so I doubt they'll be much help.

It's almost 10 years old, bought in Hong Kong way back when.

I'd really appreciate any help!

Thanks

ASA Lives!

Ten-Tec SUCKS

I will not buy a receiver from them as a protest against their sucky
management !

the DX-394 is very quiet yet pretty sensitive. after I have modded one it is
a very nice receiver !

Who the heck is the ultra-loonie "Planet X"
nutball on 5085 tonight? The signal is absolutely
HUGE in north Texas tonight, with nasty distorted audio.

I too like my 150, but the current receiver I am building- loosley based on
a W7ZOI design is quieter, probably due to the gain distribution and the
fact that Wes designed the AGC such that it does not kick in until
about -90dBmV; unlike some of today's radios where you can actually see band
noise on the S meter.
Still under construction, with a 1980's theme:
http://www.parelectronics.com/pics/w7zoi9.jpg

The AM detector is an NE602 used in a squaring circuit - wonderful A.M.
recovery.

Are you near McKinney? I have a beau there! Will be there soon. Let's
get together.

sheman

Too bad we wasted 250B and 1400 lives for Iraq freedom. What a
cluster F. And for what? To avenge 3000 deaths in NY? We lose more
than that from smoking every month and car accidents. The terrorists
have won it all. Everything's about terror. Can't ride my bike next
to the military base after 9/11 - trails closed - too risky. Can't
bring my scissors on a plane - too risky. Have to stand in long lines
all over the damn place - EVEN a damn minor league hockey game - a
church, and museums for the sake of security. I have to take my
damn shoes off and get my socks inspected at a damn tractor pull! My
God. They've won it all. We're cowards. I say fcuk 'em. The other
day some dude parked his truck on the tracks and killed a bunch of
people. Do you think the article in the paper talked about it being
some sick dude or a real tragedy or something like that? No - they
said it highlights the vulnerability of trains to terrorist attacks!
What a sick bunch of scared pukers! What kind of sick journalist
thinks like that? The terrorists have us right between their
towelheaded balls - we're scared and running. We're eating,
breathing and shitting terror all day long. It's all about them -
not us. And now - we're breedin them terrorists like rabbits in
Iraq. Yea - we've got ourselves in one big damn mess and my towns
lost a couple of our guys/gals. We handed it all to the towelheads.
And all for Republican pride and patriotism. Well I'm here to tell
ya - Iraq ain't God's work and it's about as far from patriotic as
kosher food is from pork rinds. flip

A church where you *HAVE* to make reservations just to attend, can't just walk in....And a preacher who has guards to intercept a handshake (just in case there's a summons or legal papers hidden)....Who scammed people for money to do one thing (on the air) and then did something else with that money....Sorry, I just can't be sorry for him.....He was good for a laugh years ago, even went to see him in Oakland once (in the basement of a church) and was *searched* before I could enter (we're talking 25 years or so ago). Man he was/is *paranoid*.

Let's face it, he IS a huckster......and a successful one at that. But I won't morn him.

Hi Greg.
Do you have metal screens on your window?
My wife and I lived in a condo with antenna restrictions.
So I used a piece of hook up wire to the window screen.
I love it, antenna right in their face and they did not know.
Worked great @ 7mhz my favorite band.
PEACE

Yes. The TCP-IP business makes tracing all your communications much easier. Your fingerprint is on everything coming and going. With shortwave, they don't know who the listeners are. Only troublemakers listen to shortwave, right? Eliminate the medium by effectively jamming it via 'inadvertant' interference.

There is a major problem with powerline transmission anyway. If the lines go down, you lose more than the power. With people increasing using telephones over the net (easily traceable/monitored via the packets with NO court decree needed) they will lose that too.

Too many eggs in one very public basket.

Do you think that the Honus moniker is queer? I did not really think about it but it is rather cute. I guess it could be a queer name. It could be queer as in funny or queer as in bisexual.

Now that you mention it, the name is kind of queer. Thanks for pointing that out.

UrS,

Inspite of the natural number sequence :
2200 > 2600 > 2800 > 2900
.
The Pansonic RF Series of Radios came out :
RF-2200 > RF-2800 > RF-2900 > RF-2600
.
The RF-2600 was the last (best?) of the Panasonic
'portable' AM/FM Shortwave Radios that had Analog
Tuning with a Digital [Frequency Counter] Read-Out.

I have been using it for like 1 year with no system crashes. If you want, find the Exe file for the program in the proper folder. Right click on the Exe file and go to the "compatibility" tab. Choose to "run this program in compatibility mode" then choose another operating system like windows 95 or to the OS you're using.

You can also download "pictures" with RXplus. That's SSTV which I'm not familiar with at all. I mean I never used it yet.

Oh it's great for audio. Once you get over the learning curve which is pretty simple, this is great software. I can use it with 3 of my radio collections so far.

1] Kenwood R-5000
2] Ten Tec 320-D
3] Icom R-75

I could use it with my JRC NRD-525 also but I need to buy the computer card for it from France. It's really very compact and cheap at $80 compared to the other software on the market. So, if you have more then one radio that this software works with, you really harvest all the benfits. I tried to convince Noel to give it away for free but it didn't work :)

Anyway keep working with it. There is a Yahoo group started by him just for his software. Address all bugs directly to him there since he supports it vigorously.

I just wanted to add I bought the remote control option for the R-75 and
it's fantastic.
It has features you don't have from the radio control panel itself!

I want to buy the UT-102 voice synthesizer so I can announce the frequency,
S-Meter strength, mode etc from the remote controller in the dark like a kid
:)

The quietest receiver I ever owned was a Scott RX-200 (same radio as the Grundig S-350 or Tecsun BCL-2000) that I bought off of E-Bay. It was very quiet as it was DOA.

In his auction text description, you are able to click on the different details of the radio like "s-meter", "rear panel" etc. This format looks very familiar.......Universal Radio uses this format.

Knowing this, I right-clicked and looked at the properties of Mr. Martyn's detail pics......guess what......they were all lifted from Universal Radio's used equipment photo listings. They are not actual pictures of his 7700. Look closely at the detail of the rear panel....the serial number was wiped out.

I think that someone should report this to Universal Radio....I don't think it's legal to use their photo's without permission. Martyn wouldn't do that, would he?

That Lowe 150 went for $465 and it didn't even have a US power supply. Was
it worth that price? How much would it have been worth if you could find one
with a keypad for it too??

Thanks
Lucky

OK I did some checking. I guess they go for about $50 or so.

BTW, is the Preselector for the 150 a very needed addition or are you good
to go as long you take overload precautions??? I read the 150 overloads
easily.

I think it's more likely that he doesn't want other folks contacting his
bidder(s), clueing them in.

The Lowe preselectors are very rare in Europe. These are one of the best
preselectors ever made -except some military grade stuff- and worth
every cent.

The WinRadio G313i by far. Noise floor -138 dBm and the continuously
adjustable IF filter let's you adjust the IF bandwidth to precisely
match the bandwidth of the signal. No other receiver comes close.

The "Braun" preselector. It's better and even more rare and pricey.
The Yaesu FRT-7700 works fine with my Sony 2001D/2010.
This discontimued item sells used for the price as it was new....

I just don`t know a really good preselector wich is still manufactured.

I've got one that doesn't work, does that count? No sound at all...

Seriously, though, I think the radio with the quietest noise floor is my
Zenith Trans-Oceanic 3000-1. It has very little audio until you tune across
a station. It's not unusual to blast yourself out because you turn up the
audio, thinking there should be lots of static.

i was going to skip this topic. but, being bored here, waiting
for my vary late flight, on poor wi-fi, at Pgh Int AP. i use a
100 ft of (i believe, been a few years sense i put this up), #26
ins. goes from the 4th bedroom/computer/radio room, (smallest-
bedroom). from the mini-plug- around the ceiling-down the hall-
into the dining room, and, around that ceiling. dining room has
the most windows and faces west. i call it my storm antenna. and-
as of this weekend- a Wellbrook ALA330s. not being home allot, and
till the winter breaks- it's hanging from the fan- over the table
by a small bungee cord. the 330s is one great loop. i own a few other
loops; torus/sony/aor, etc. the wellbrook is great. if it was a little
smaller, i would put it in the attic. i just got it sat morn, and only
had 2 days to play with it. works good. nice and quiet. as Joe A. says,
lower signals, but vary readable. #58 coax takes it to the AOR and
the R8B. gotta go, but, as they say here, the antenna is more than
half the setup. Good DX to all...
Drifter...

If you want to try doing it yourself, it's not hard to do but is a delicate process. If you're interested, I can post the instructions here.

Tom

I have it too :-)
I have nodified it to feed an external antenna with BNC connector. So it
makes a fine selective HF preamp. I've this thing cascaded with the
FRT-7700.
It works fine with my Sony but it doesn't make anything better on my
NRD-525.

Mike Maghakian offered one here for $425 a few weeks ago - that was a good deal.

My impression is the one on ebay closed around the middle of the range they normally do.

That's about the price I would have expected on Ebay. I've seen 'em go for less, but I've seen 'em go for more, too.

I know a couple of folks who use highpass filters on their 150's. My understanding is that, if you just suppress everything below 1700khz, then you won't need anything like the Lowe preselector. Others may have some first hand insights to offer here.

Also, as for the keypad, 150 owners might consider getting a remote control unit for the Lowe instead. I think this will prove more convenient and probably offer more in the way of functionality. Go to www.swl-remotes.com and take a look. (I have no connection to swl-remotes, other than being a satisfied customer.)

You can run it active with a 9 volt battery too.
But, the 150 has a built in preamp. But that's only for the whip right?
Still, you can clip a longwire to the antenna.

It also depends a lot on the condition of it since the radio is not very old
but it has enought years on it where you should be careful buying. I'm sure
Mike checks his stuff out good before he sells it.

Maybe, but it took thirty years for wideband FM to become competitive with AM. And FM didn't replace AM. FM didn't start growing until there was a market for additional stations.

I would willing to pay a little more for one if it was in excellent cond
and the seller was superb. It's easy to get stuck with a bad radio nowadays.

This idea ist not that good for me. I like to feed the preamp with a sinal from the attic 6th floor (my appartment is on base floor) and not with computer noise :-) There are some unused chimneys I run some coax-feedlines through. Unfortunately I'm forbidden to go on top of the roof :-((

Do you find that you need a pre-selector where you are at due to high signal levels from various sources or is there another reason why you need one.

I've never found a reason here to use an 'outboard' pre-selector.

For sure I don't need this on the NRD-525 as you dont need one on the
Drake-R8B... :-)
But as I had the things available I gave it a try on the NRD too :-)
On the Sony the external antenna with the FRA/FRT combo works wonders.
You can use them together to passbandtune for much more seletivity than
the Yaesu FRT-7700 preselector alone is giving. For sure you have to
fiddle on the knobs a lot. This may be another thing with other brands.

Check out the Sony ICF-7600GR. I think it's probably just what you're
looking for.

Well, years ago, when I got back into the shortwave hobby (circa 1982 or so) I did eventually purchase a FRT-7700 for use with the FRG-7700 which I had at the time.

I'm pretty sure it's set up like the 7030. The whip connects to the regular antenna jack. You can use the preamp with any antenna, but if it's a large one, you should expect overloading.

Never bought a radio from Mike, but he does have a good reputation.

Besides condition, options will be a factor - some have backlights for the LCD, others don't.

Two variants you don't see very often are the Marine and Europa versions. The Europa had improved specs and a stronger front end. Not sure what the difference was on the Marine one other than it was white.

Ok that's better. I'm spoiled by the preamps on the R-75.

Yes but I hear the Europa model is far and few between. I would buy a little
pen light for the original 150 at night. I bet it wouldn't be hard to hook
at a good LED right over the display.

Are there any drawbacks to this model? I don't know what I'm talking
about here, but I've read about a problem on some receivers with drift
and also some receivers not being able to pick up certain broadcasts.
Does this have either of these problems?
Also, amazon carries the Sony ICF-SW7600GR -- is this the same model?

2509. Moqtada Al-Sadr bribed by US on election day

Newsgroup: rec.radio.shortwave
Date: 2005-01-31 15:15:29 UTC

Moqtada Al-Sadr bribed by US on election day

This doesn't seem to have been reported anywhere else, but Geraldo Rivera mentioned something interesting late last night on the Fox News Channel overnight marathon coverage of the Iraqi "elections." Rivera said that Moqtada al-Sadr had been bribed, paid off, so that he would keep his forces from blowing stuff up during the voting.

Al-Sadr is the grand-mufti-type Shiite cleric who rules over a large, allegedly slummy, area of Baghdad known as "Sadr city."

Your tax dollars at work.

I spent over a year looking for a Europa. The only one I found was at a dealer in the Netherlands, but they wouldn't export to the USA.

While you could use a penlight, the back light is a convenience - less stuff to keep track of.

I'm just get a bug for a radio and end up buying it even though I have a bunch of radios already. I got a bug for the 150 and that's it. I hear about everyone loving it and that it's built like tank. Plus it being manufactured in England draws my attention too.

Geraldo. He's a hoot, ain't he?

You sure can take anything he says as gospel.

However, Mucky kept his forces from blowing up stuff because Mucky was warned his fat ass was going to head off for moslem paradise if he opened his mouth one more time by his closest moslem pals.

> Also, amazon carries the Sony ICF-SW7600GR -- is this the same model?

Yes, it's the same model. I just forgot to writ the 'SW'.

I wouldn't be overly concerned about drift unless I were buying a more
more expensive receiver. The 7600 will be fine. It's the best in its
class (at least in my and many other peoples' opinions).

As for not being able to hear certain kinds of broadcasts, there's no
receiver that can hear all broadcasts. It will come with a reel type
antenna that will improve reception, and you might consider buying the
Sony active loop model AN-LP1. It works very well with the 7600GR.

What kinds of things do you want to hear? The 7600GR will be fine for
the major broadcasters and, if you want to listen to hams from time to
time, it does surprisingly well on SSB for a radio of its size and
price.

The designer(also the main engineer of DE1103 & Grundig SAT800) now ask advise of the receiver function from BCLer, the DE1108 will be the high-end receiver of DE 110X series, it comes with a large dot matrix LCD display(128*64) two way speaker system, MP3 recorder, AM sync detector, SSB, dual conversion, the reference basis is SAT700, it should has better performance than sony 2001D, 7600G, SW77 even SAT700, the outline dimensions will be large than SAT700,pls post your thougts here, I will take the message to the design, thank you!

I was all set to buy a 150 Europa from a fellow, but just as he was about to sell it to me, he told me his primary receiver went on the blink and so he no longer wanted to sell. I was a little bummed about this. At the same time, I was also concerned about the 150 Europa, as some people reported that, in addition to its stronger front end, it was also a bit less sensitive than the standard 150.

In any event, I ended up getting a standard 150...actually, it's not entirely standard because it's one of the 'black case' 150s assembled by South Midlands Communications. These were among some of the very last 150s made. It has to take back seat to an R8B in my house, but it's a damned impressive little receiver just the same. The build quality is amazing and the tuning knob is wonderful...it's smooth, gentle action will rock you to sleep!

"...but I can't seem to find a radio that doesn't have several
negative reviews..."

As far as reading negtive comments on receivers, I would be aware of
them, but at the same time try to read the positive points about a
receiver as well. I don't know about you, but I tend to focus on
negatives when reading a review and sometimes have to force myself to
read and possibly infer the good stuff too. The Sony ICF7600, Degen
(Kaito) DE1103, and Grundig YB all will catch a lot of radio signals.

If I didn't already own a DE1103 I would probably consider the Sony
7600.

The R-390A gets my vote. Its phase noise figures are among the best, which helps the weak DX get through.

Among solid-state gear I've owned, I consider the AR7030 and ICOM 756Pro series receivers to be quiet, but not to the same degree as the R-390A.

I know that its quite a bit more, but any feelings on the Sony
ICF-SW07? I've been in the market for a nice travel alarm clock,/radio
and could perhaps justify this radio if it has the same quality SW
reception as the 7600.

What would be the benefit of the DE1103 over the 7600?
If none, I'll probably order the 7600.

OK, here are a few thoughts on features I would like to see on the DE1108 portable:

1. Digital readout to a finer resolution than the Sony 2001D. A readout of 0.01 kHz would be very nice.

2. A passband tuning control (PBT) such as the Eton E1/Grundig Sat900 will have, useful to at least +/- 2 kHz range. If passband tuning cannot be included, then the AM synch detector should be a SELECTABLE SIDEBAND type, as with the Sony's. Ideally, the new Degen would have both of these features.

3. Sensitivity at least as good as the DE1103, which is a useful portable here on the West Coast of the USA where signals are weaker.

4. A comfortable, large tuning knob, without audio "chuffing" (muting) when tuning. The tuning knob on the DE1103 was a step in the right direction, except it couldn't be very big due to the small size of the radio itself.

I'm not familiar with the SW07. As Leowood indicated the tuning knob is a definite plus on the DE1103. I find that tuning a knob is much easier than punching up/down buttons for casual bandscanning. It just seems easier to move through a band and reverse directions with one thumb on a wheel.

I used and completely wore out a Sony ICF-2002 (7600D) which was the original version of the current 7600. My only complaint was all the button pushing to tune through a band.

I also used and partly wore out a Sony ICF-7700 which used a digital/analog display similar to the DE1103. While the 7700 had some performance limitations, it did use a tuning wheel and that made tuning the bands a breeze. It was fine for listening to major broadcasters and MW and FM stations.

My Lafayette KT-340 was pretty darned quiet, as were many tube radios.
It wasn't particularly sensitive though.

The quietest digital receiver I've owned is a Kenwood R-5000 and it is
sensitive

I'm planning on making my first trip in 5 years up to
Dayton, and I'm on a mission to go hunting for a
good boatanchor. Hell, part of the reason why I've
been adding some lifting to my workouts has been
to haul one of those babies back to my car over at
the Salem Mall (or whatever the hell they call that
empty shell now).

Ideally, I'd like a Hammarlund HQ-180AC, which
I've used before for about 3-4 months, but I'm
realistic enough to know that with the demand for
one that I'm not probably going to land one. My
big question, then, is what would be a good
alternative?? I'm not interested in the R390/A
(the demand thing again), or the SP-600 or SX-88
either. I don't really know too much about the
50's-60's Hallicrafters models, and the only other
model I'm familiar with other than the HQ-160 is
the Hallicrafters S-20R Sky Champion.

I've thought about hunting for a Hallicrafters SX-100,
but that's about it. Anyone have some models
that would be worth it to hunt for?? Once I get
a list, I'll go doing some online research and narrow
my choices down (starting with dxing.com, naturally).

Man, I just dug out an older EEM (Electronics Engineers Master catalog)
and it's a MESS. Even in 1993, some outfits were still using MFD for
microfarads.

Millifarads are probably an artifact of Globalization (ie. of the outfits
that used MFD for uF in 1993 are probably now empty factories in the
US midwest after all their equipment got auctioned off to somebody
from Canton). Likewise nanofarads are pretty much of an indicator the
your capacitor was made by a European based manufacturer.

I'd only expect to see millifarads on big "Computer Electrolytics",
those beer can size (or bigger) with screw terminals.

The bottom line for project building hobbyists is that you need to take
into account when and where the magazine article or book was written.
There's a lot of stuff out there that's old enough to be really confusing.
(Several years back, I had an e-mail converstation with a guy who was
trying to find parts for a transistorized VLF reciever, and the writeup
included how to use it for detecting atmospheric atomic bomb tests,

which quit before 1963).

I had an Sw-07.

It was a pretty good radio - especially when you consider it's size.
They come with a very good active loop antenna.

But the buttons were quite small, and I looked at it more as a neat
gadget than a radio I'd want to use on a regular basis.

It had a lot of features for a portable - but not as many as I'm used to
with my table top radios.

50,000 uF. Probably about the size of small can of V8 juice, given the
voltage rating you'd use in a car (16 or 25 volts?). The newer they are,
the smaller they get, so I might be showing my age.

Not sure what all you are looking for or the age. Here's a couple of
National Radio possibilities though:
Look for an HRO 60 (love that dial) or a 100ASD.

Wouldn't it make more sense to study up on old receivers,
sio you'd be able to choose among what you can find, rather than
trying to find a specific model?

Once you figure out the sort of receiver you want, then there are
bound to be many that fit that. Obviously some would be better than
others in a given range, but with a good knowledge base you can
better decide whether receiver A at XX dollars is a good tradeoff with
receiver B with YY dollars.

There is a book or two that documents old receivers. It might be
worth getting one of them (if they are still in print), giving you
not only a chance to look at all that was available at one time, but
you can take it with you in case something exotic comes along and
then comes into consideration.

128 x 64 dots? Not large
I'd like a spectrum display, that is too small for effectiveness.

I heard the interview on local radio with the Eton manager and wonder
if it is to be too much for what it is, sw and sat radio, etc. Seems too
much.

Source record: 6488

Hello,

The radio should offer:

Dual or triple conversion with no less than excellent front-end selectivity.

Full coverage from at least 100 kHz to 30000 kHz AM (no gaps), 76-108 MHz FM, and possibly simple air band reception (118-137 Mhz).

4 or 6 rechargeable-NiMH "D"-cell operation with MANUAL switch on back to choose AC or Battery operation (so that AC Adapter need not be unplugged when on battery power).

Synchronous-selectable sideband reception is a MUST. Should be designed at least as well as that on the Grundig Satellit 800. Full passband tuning would be even better. Lock must be held as well as on AR7030 model and must automatically turn off when tuning and then re-lock when station is selected.

A good notch filter (with at least 50 dB depth) with range of 0.1 - 5 kHz.

At least 3 IF filters (bandwidths) (preferably 4) of 2.2 kHz, 4 kHz, 6 kHz (and possibly 1 kHz for data/CW); operation of these filters should be cascaded so that inexpensive ceramic filters will give much better performance than usual. (6 filter bandwidths would be ideal.) All shape factors should be less than 1:2.

All parameters should be fully adjustable independently in all modes of reception (except FM and the digital modes).

At least 200 memories. Tuning via knob (no "chugging" or muting), "slew" buttons (5 kHz on SW, 9/10 kHz on MW, 9 kHz on LW, and 100 Mhz on FM). Signal-scan automatic tuning. Memory scanning. Automatic memory sorting. Automatic station setup (as on Sangean models) for AM and FM memories.

Remote control operation possible with a CORDED detachable remote control (at least 6 feet in length or adaptable to an extension cord if user desires).

Dial illumination via LEDs, perhaps color-switchable (Red, Blue, Green).

Dial light scheme similar to Grundig Satellit 800. (Always on or always off with AC power, on for 15 seconds with any button push when using

battery power, or always off with batteries, as desired by user.)

Line outputs for external speaker(s) and stereo system. Excellent sound quality is a must. Independent tone controls (Treble and Bass) should be incorporated. Internal mono speaker of high quality is preferable to mediocre stereo speakers.

At least two external antenna inputs for AM/SW (high and low impedence) as well as an FM antenna input.

Built-in antennas should be: a LONG (possibly detachable) whip (PLUS a shorter whip possibly optionally offered for travel); a LONG (at least 130 mm) internal ferrite antenna for MW and LW. External antennas to override internal ones.

IBOC reception (AM & FM) for the US. Canadian DAB. (Possibly European DAB.) Self-contained DRM (or a 12 kHz IF output to connect to a DRM-equipped computer).

Clocks should be RADIO-CONTROLLED (and operated independently from radio and powered via 2 AA or AAA batteries). Two times zones should be available, one of which should be UTC. Local time should be adjustable for daylight-savings time (via radio control) if required; UTC should NOT be affected by DST change. One of the clocks (including seconds) should ALWAYS be visible, radio on or off.

No LEDs (except for dial illumination and possibly button illumination). Properly calibrated digital bar graph S-meter of at least 12 segments.

A high-quality plastic cabinet or, preferably, a light-weight metal (aluminum or magnesium) cabinet.

ALL internal components to be of TOP-QUALITY (formerly known as MIL-spec).

Excellent sensitivity; a 3 or 4 step attenuator (or adjustable RF-gain control) should be incorporated.

All other specifications to be of Drake R8B/AOR AR7030 caliber, especially blocking, ultimate rejection, image rejection, and, most important, dynamic range. Excellent sensitivity (a 3 or 4 step attenuator would be of help).

A carrying case (nylon or leather) should be optionally offered; this should be able to carry AC adapter, batteries, and any other options, as well as fully protecting the radio.

Servicing is important. All service information should be made available on line.

Guy Atkins has made some important suggestions; his suggestions should be incorporated also.

A tall order? Yes. A "perfect" radio? Almost. There has never been anything like it! What should this radio sell for? I would pay $1000 or more for such a radio; could it be manufactured in China for $700? Since this is to be your top-of-the-line radio, it should be designed and made as perfectly as possible.

You make it, I'll buy it!

Joe

> There is a book or two that documents old receivers.

Yes, that would be the smart way to go, unless you're dead set on a specific model. Since the OP doesn't appear to be, it'd be smart to get a copy of the book Shortwave Receivers Past & Present by Fred Osterman. It's not only a good reference guide to just about every tabletop HF receiver out there, it's also interesting reading. But reading up on the different models and studying their features along with pros/cons is a smart thing to do whether you're buying a new receiver or old one.

Believe me, I have. But reading != actually listening
to them. When I was last in Dayton, there was a guy
with a rental truck who had a ton of old boatanchors
for sale, so I figure that the smart thing is to try to
look for 5-10 models, since odds are good that at a
place like the Hamvention I'll find a couple of each.

> Once you figure out the sort of receiver you want, then there are

Well, since it's been several years since I've looked
for a boatanchor, I know that prices have changed
as well. I'm shooting for keeping it under $300, but
we'll see.

> There is a book or two that documents old receivers. It might be
> worth getting one of them (if they are still in print), giving you

> then comes into consideration.

Yeah, I've been rereading the Communications Receivers
The Vacuum Tube Era by Raymond Moore several times,
but the main thing on that one is the tubes and some basic
info, not too much on other details like sensitivity and extras.
I've the first edition of Fred Osterman's Buying a Used
Shortwave Receiver around, but it's rather limited on the
tube radios.

What I was hoping for was recommendations by folks
who've actually used some of them, because it gives
me a starting point. Since I know that time flies when
you're having fun and there are a lot of models to hunt
down, it's nice to hear from folks who've actually used
some of the old rigs.

One idea would be to make it a "hang on the wall" shortwave. Desk space
is problem for a lot of us, and I think a radio with a form factor like
a flat panel TV would be neat. (My 2 cents worth. $.02 is probably asking
too much).

Dear JShorr,

There is NO short wave radio made which is perfect. ALL have some deficiency(s) which may be more or less important depending on the requirements of the user.

That said, the Sony ICF-SW7600GR (preferably used with its associated SW antenna the AN-LP1) will give a novice all the performance and construction quality for which he could wish. This radio has "staying power" as well. Even if you become a "seasoned veteran" like me, you will not "outgrow" it.

It is an excellent radio for listening at home on SW as well as MW and FM (it is particularly good on MW); it has a dedicated line output so the sound can be run through your stereo system if you desire; it also travels VERY well.

The radio can also be used as a travel alarm (with TWO wakeup times).

With its whip it has good sensitivity. You won't miss much! It is VERY stable. Its SSB reception is arguably the best of any currently-available portable radio. Its synchronous-selectable sideband circuitry is offered by NO OTHER small portable with the exception of the SW-07; note that the '7600/AN-LP1 combination is far less costly than the SW-07 and performance is comparable. Having experienced listening via synchonous selectable sideband circuitry, I shall NEVER buy ANY SW radio without it!. If you purchase the AN-LP1 antenna (which can be purchased separately sometime in the future), you will find this radio/antenna combination to afford excellent performance.

It is even VERY EASY on batteries; it you use NiMH rechargeables, your power costs will be extremely low. (You don't need to buy an AC adapter for this radio. It works better on the batteries, anyway.)

The Sony ICF-SW7600G radio can be purchased new from Amazon (the least costly dealer I have found), J&R Music World (they have low prices too, sometimes less than Amazon, but check shipping costs: Amazon's is generally "zero"), Universal, AES, and some other dealers. Check the prices, but make sure you buy from a reputable dealer. AES and some others sell the AN-LP1 antenna (AES's price is $89.95, less than the dealers on eBay!).

I wish you the best of luck. I personally own three of the 7600GR models and two of the predecessor 'G model (the 'GR is better). (I also now own five AN-LP1 antennas.) I have bought many other receivers which did not give me the satisfaction that this one does. I know that if you buy this Sony receiver you will never regret it.

Best,

Joe

You are smart to rule out the SX-88. I did a full restoration on one a year back and it went for $7500 on EBay- I have seen them as high as $9500.

I am always disappointed when I get a chance to play with the Hallicrafters receivers- except the SX-115. Hammarlund is a bit better, but both suffer from poorer calibration marks as you go higher in frequency.
You might be interested in one of the Drake 4 line receivers. These are exceptional, have the capability of adding additional filters, one of the best NB's ever made, 1KHz resolution, low drift and their PBT is fabulous. I have added a full set of crystals to my R-4C and find it to be a wonderful SW RX. Sherwood has some very nice updates. Even more importantly, they are plentiful and a fraction of the weight of the BIG boys. You'll see lots of them at Dayton.

Dear Jim,

"JTaylor" wrote in his reply to you that you should put "gloat" in the title! THAT is an UNDERSTATEMENT regarding the price you paid for a Hammarlund HQ-170! This radio is their top-of-the line ham-band only radio of the time (early '60s). The general coverage equivalent is the HQ-180 (for which I positively "LUSTED" when I was young; the '180 sold for $429 in 1962; that was the price of a good used CAR!). The radio is an absolute classic and I should recommend you inquire about having it restored to like-new condition (when finances allow). While it picks up only the amateur bands, you will not find a radio that does so any better. These radios are the only "boat-anchors" which remain competitive today.

It's a triple-conversion radio and it was made for several years starting, I believe, around 1960.

Your radio sold for $359 in 1962, $369 if it is equipped with a clock. Hammarlund made a matching speaker, the S-200, which sold for $19.95 at that time. (I checked all this out in my 1962 Lafayette catalog. I couldn't afford a Hammarlund, so I bought a Lafayette HE-10 [$79.95] and its associated speaker, the HE-11 [$7.95]. I also bought a pair of Clevite "Brush" BA-200 headphones [$14.70]. I still have all of them! They still work as well as they did when new [and those headphones are still as uncomfortable as they were when new!]. The only "servicing" the radio has required over the years is a few tube replacements. Five or six times a year I "fire it up" for old-time's sake.)

While I personally do not collect old radios, I envy you owning this particular one and I wish you the best of luck with it!

Joe

While I do own many radios, and have seen prices on ebay, I didn't think what I paid for either of these radios was anything to "gloat" about. If I couldn't have gotten either seller to drop down to what I was willing to pay I would have walked away. I am genuinely curious about the Hammarlund though as all I could find out about it was what I read on eham from a couple people.

Dear Jim,

As I stated, I never owned one. But having read "plenty" about the Hammarlund radios at the time (they were considered second only to Collins then), I know that this radio is a true work of art. In the early '60s it was considered one of the very best ham-band receivers.

Hammarlund always featured (according to contemporary reviews) stability second-to-none. Their dials were particularly well-calibrated also. They were, as you can see, constructed like a tank. Their sensitivity and selectivity were also top-notch. Internal speakers were not included in those "boat-anchors" mainly because there was no room for them! Yours is a particular "heavy-weight," both in mass and performance.

I can't answer any particular questions concerning this receiver as I never even had personal experience with one (though I sure wish I had!). But I think its reputation at the time and even now speaks for itself. Take good care of it and, if you ever do sell it, don't sell it cheap!

Best,

Joe

That depends. Some people actually prefer the 7600G/GR tuning key layout to a Sangean-style tuning knob. That said, you're never as fast scanning bands as with an analog set. But overall I don't think it's overly dramatic. Reception wise the 7600GR is certainly still very good in its class, with SSB being hard to beat due to Sony's "secret weapon" CXA1376. I would certainly like to get my hands on a datasheet of that IC, being a very curious nature in things like this. (I guess it would be in Japanese, though.)

One thing I have long waited for -- a radio with USB flash drive support.
It would be great to record off the radio with different quality bit rates
(low to high) and transfer the files to my pc for CD archiving or vise versa
for playback on the radio.

Thanks Joe. Only amateur bands? :(That kinda sucks. Good thing I have others. I doubt I'll restore it. I have literally over 100 odd shortwave radios and after I buy them and play with them for a while they just sit and collect dust. I call them my "retirement fund" I'll probably put most of them up on ebay in 10 years or so and be accused of being a "capitalist pig" LOL

I think the R4-C was the only one of that lot that was capable of actually
adding filters to.

I believe the R4-B was actually the better receiver for SWBC IMHO.

With private auctions, you'll have a tough time proving shill bidding.

Ebay may be able to check to see if bids are coming from the same IP address as the seller. This would probably be a better shot than asking them if gottahaveit1995 is bidding - as he was already caught shilling with that user id, and I doubt he'd repeat the mistake with the same user id.

He went to the private auction format when folks here started talking about warning his bidders about his practices.

Indeed, as soon as I asked him a few questions he stated that I was blocked as a
bidder. Not that I was really interested anyway, but ask a few pertinent questions,
and you're done!

I am Leowood Wang from CHINA, the designer of DE1103 (also the same
designer for Grundig SAT800) is my friend, pls check some interesting
test record for DE1103 as follows

http://www.degen.com.cn/images/1103/1103-test.htm

also here is a Block Diagram
http://www.degen.com.cn/images/1103/de1103-box.jpg

Hi LW.

Thanks for the links and information regarding the coming
DE1108.

Please be aware that at least one member of this group may not
approve of the work you've done, and will say so. (They
already have in previous threads) Their reasons for disapproving
are political and could possibly involve other nefarious motives.
Regardless of that, you are welcome here and we look forward
to sharing shortwave radio feedback with you.

What you want is an HQ180A which has the 170's triple conversion, and
general coverage or an
SP600JX with Hammerlund HC-10 converter. The 170 and 180 converted down to
455KC and
then had a tunable IF receiver that received 455KC + or - 5KC approximately.
It had a set
of sharp IF filters at 60KC and you could select either sideband and use a
bfo to boot. I really liked the receiver for the 1963-1970 period ham work.
I got to use a 180a and found it to be excellent as
well.
Ed, N5EI

to use a 180a later.

LW2,
.
Using the Sony ICF-2010 as a 'standard and
a Grundig Satellit 800 M as a Reference:
.
* DRM = Digital Radio Mondiale Built-in DRM Signal Processor.
.
* Radio Data System {RDS} Information Display
.
* AM SYNC with Selectable SSB
- Dual Side Band AM-Sync = 6 kHz
- Selected USB/LSB Single Side Band AM-Sync = 3.4 kHz
.
* Four AM Shortwave IF Band Widths
- DRM Extra-Wide 12 kHz
- AM Normal 6 kHz {AM Sync}
- DXing Narrow 3.4 kHz {AM-Sync Selectable SSB}
- SSB 2.4 kHz
.
* Two FM IF Band Widths
- Stereo/Local FM Normal = 210 kHz Wide
- Mono/DX FM Distance = 130 kHz Narrow
.
* RF Signal Input Control Three Position :
- BOOST = Built-in 10 dB Pre-Amplifier
for the Whip and Ferrite Bar Antennas.
- DX = Normal
- LOCAL = Shortwave Only 2-30 MHz
Band Pass Filter with -20dB Attenuation
for both the AM/MW Band and FM Band.
.
* Large Tuning Knob and Up & Down Tuning Buttons
with about 240 to 360 Memories.
.
* Dual Tuning Steps: {Fast and Fine}
- FM = 200 & 20 kHz
- AM = 10 & 1 kHz {AM-BCB = 9/10}
- SSB = 1 kHz & 100 Hz
.
Separate Antenna Inputs :
- FM "F" / PAL Connector
- AM/MW and Shortwave
- - HI-Z Dual Terminals {A&G}

- - LO-Z Jack SO-239
.
* Speakers Three (2:1) for FM Stereo
- One Rear Facing Bass {4.5" Sub-Woofer}
- Two = Left and Right Front {3" Stereo}
- Audio Output Selector Switch:
- - Mono Talk & News {Voice} Front Two
- - Mono Music all three speakers
- - FM Stereo - HiFi (2:1)
NOTE - Sort of like the Grundig Satellit 2400 Dual
Speakers put the Controls in the Center and the
Speakers on the the Left and Right Front Sides.

Source record: 6573

Yes, I picked one up not long ago. I wanted something that satisfied
the following conditions:

1. Is compact enough to carry around on "mini-DXpeditions"
2. Will yield better performance than a high end portable
3. Is well-built
4. Is reasonably priced, but a good value for the money

I decided that an HF-150 would be a good way (though by no means the
only way) to satisfy all these conditions. I'm enjoying it. I'm happy
with the purchase and am enjoying the receiver.

Steve

2584. 7.811 MHz USB 2200 UTC AFN

Newsgroup: rec.radio.shortwave
Date: 2005-01-31 22:08:22 UTC
From: Soliloquy <Notvalid@notvalid.com>
Message-ID: <Xns95EFAE57CD3E6SoliloquyTriesHarder@216.168.3.44>
Source record: 6574

Stumbled onto this one last night. 7.811 MHz, USB, originally heard the contact at 0440 UTC 01/31/05, I have it fairly clearly, the time being 2200 UTC. Mentions on the frequency have been made of the "Airforce" (the next word was garbled), but I found the following online:

From: http://www.dxing.com/dxr/dxld4179.htm Glenn Hauser's DX Listening Digest, from December 1, 2004

"** U S A. As noted in DXLD 4-178, I have heard the new AFN frequency presumably from Florida on 7811 USB //5446.5 USB with pop music, PSA's US Air Force news. at 0223 on Nov 29. Not //10320 USB which was carrying Monday Night Football game. Poor but clear (John Fisher, Kingston, Ontario, DX LISTENING DIGEST)

I was hunting for 7812.5 AFRTS per your recent World of Radio and found them Monday night on 7811.00 USB with Ricky Nelson's "Garden Party" and ID and Christmas greetings from clebs including that little yellow Bart Simpson // 5746.5 and 12133.5 from 0028z on Nov/30/04. Rock solid, clear S3 (Wells Perkins, N.J., Nov 30, DX LISTENING DIGEST)

7811 USB finally heard here, Dec 2 at 0140 when the AFRTS website was being given; but it was quite weak, audible only on longest antenna with some local noise sources turned off; seems 7507 was stronger (Glenn Hauser, OK, DX LISTENING DIGEST)"

They are playing NPR news at this time, and I am receiving it with an indoor antenna that goes around the ceiling of a small room, the radio is an Icom R-75.

Soliloquy.

Today mF most often means millifarad.
But in years past mF meant micro,
as in uF, farad.
Some diagrams as recent as the late 1990s
still used mF to equal uF.
Conversly, before the mid 1990s, no one but
the military EMP research labs had Farad or
milliFarad caps. I still remember when I saw
my first .47F capacitor. Kind of freaked me out.
I used a couple of 0.47 caps to replace the
lithium backup cells in my R2000 and my IC-28A.
If I had a few $100 to spare, I would be temtped to
buy one of the several Farad caps designed for the
automotive crowd. A cap that size would allow me
to coast through most power glitches.

Some points I can think of offhand:
* Use good quality IF filters, i.e. 6-element ceramics or such for AM. (If these should not be available, get inventive.) I'd combine these with a wider tail filter. I guess DSP usage is not an option? Some care when applying the 1st IF crystal filters may not hurt, to ensure good image rejection (as well as intermodulation characteristics). FM should use 3 cascaded filters with a medium bandwidth to match the Satellit 700, with 3 gangs (tuned front-end circuits) recommended.
* With a two way speaker system, make sure sound is as good as possible with the concept, and that not only to Chinese ears. Audio engineering has sadly been frequently neglected in the last 10...15 years or so. If some kind of EQ circuit (for speaker operation only) is needed, so be it, the radio makers of yore also used such tricks. (There should be an additional tone control, tastes in sound differ after all.) Some research in terms of vibration suppression or loudspeaker building in general and such may be of help. Given the sound is right, a simple line-level 3.5 mm (stereo) input for amplifying purposes might be a nice touch.
* Get the internal shielding right, particularly with a non-negligible digital section.
* Oscillator pulling by lighting LEDs (DE1102 in SSB) and other such funky stuff better be ironed out, along with operating kinks. Plain ol' analog volume control and paged decimal presets please.
* Front end selectivity for the AM ranges should be one filter for LW, one for MW and then several (~ octave) for shortwave, maybe further varactor-tuned. (The '700 had an electronically tuned preselector, though it seems alignment of the thing from the factory wasn't always that great.) Those living near MW transmitters (rather common in the US) are likely to appreciate a highpass filter for shortwave.
* A big receiver should offer sufficient space for a big ferrite rod antenna, for good LW/MW (and I'd also suggest low SW up to ~2.5 MHz or so, where telescopic antennas tend to be inefficient) sensitivity and

directionality. Something rotatable ï¿½ la RF-2200 might be worth considering; the bigger a receiver is, the more tiresome rotating the whole thing becomes.
* I suggest at least two different frequency steps, better 3 - usual frequency grid for the band, 1 kHz and then something smallish (maybe 100 Hz plus analog fine tuning, or <= 20 Hz without).
* Memory presets: With EEPROMs being rather inexpensive these days, a few hundreds with at least 8-digit name tags should be possible. But if MP3 recorder functionality (with commodity flash memory, I guess?) is already present, one could also use the associated storage. If this should be removable, a simple file format like CSV could enable easy presets interchanging and PC based updating. (This might even include firmware updates, which certainly are not a bad idea.) The MP3 recording probably features adjustable sample rates, (average / variable, not only constant) bit rates and mono/stereo selection? (Shortwave recordings would probably require no more than 11025 Hz mono and thus a relatively low data rate, while FM stereo would best be recorded with 32000 Hz or 44100 Hz in stereo.)
* In spite of all possible complexity, the essential functions - tuning and frequency entering, tone control, basic preset saving and recalling - must remain simple and intuitive to use. If someone can figure these out without reading the manual, this is good. On a bigger set, placement of things like a tuning wheel requires some thought in order to avoid (arm related) fatigue during longer listening sessions.
* Any plans for DRM reception? (Provided some matching and not so power hungry ICs are already available. If not, a 12 kHz IF output derived from a suitable spot - maybe behind a 10...12 kHz filter normally improving ultimate rejection - is better than nothing. Reserving some space for an add-on DRM board may not hurt then.) What about RDS for FM?
* Dual balanced 1st mixers have been very similar in portables, and that for over 20 years now - how boring. Try some other circuit variants, maybe these give better results.
* For a receiver of this class, availability of servicing instructions is virtually a must.

I'm pretty sure build quality will not be an issue, given I see little reason to complain about this even on the little DE105 (I recently obtained a relabeled one). DEGEN certainly has the potential to become a major player in the mobile entertainment market.

In additional to the other features, how about a couple of wide IF bandwidths?

10 kHz for SW
20 kHz for AM and some digital modes

These bandwidths would allow users to take advantage of the full bandwidth that may be broadcast (5 kHz on SW and 10 kHz on BCB). It also facilitates bringing out the IF for DRM or other digital modes.

It's a long story, but I'll try and keep it short. Back in the old days, when I called up a BBS for the very first time, I wasn't prepared when the software asked me for a handle. I looked around my office for some sort of inspiration, and lo and behold...my eyes fell upon some of my Honus Wagner baseball cards that I had hanging on the wall. It was just a throw away sort of thing, I thought, but then I made friends there who invited me to other boards, and from there onto the Internet, and I just used the same old name so that they would know me when I showed up. I've been using it for nearly ten years now, it's almost like my own name since so many people know me by it, and I kind of like being able to say that I've never posted to Usenet under any other nym. That's it.

By the way...shame on you if you don't know who Honus Wagner was. Of course, you -are- in Canada...so we'll let it slide. ;)

Don't get your hopes up. It's queer as in unusual. And real names can
indicate sexual orientation in your book? I'm surprised at you. Or maybe I'm
not. Enigmatic, I know.

As an aside to sdaniel3's thread further down, what's the shortwave receiver that gave you the most "fun" while listening?

It doesn't have to necessarily be the best rig, just the one that was the most enjoyable to work with.

Mine is probably a Grundig S350 bought a few months ago. Definitely not a top performer, but great audio and portable.

Re the R4b vs. R4c ..
R4b .. no filters needed .. has 10 extra crystal sockets .. probably better audio on a stock 4b than on a stock 4c.

R4c .. need filters (InRads RULE ! ! !) .. has 15 extra crystal sockets. Audio not quite as sweet as on a well tuned R4b, but not shabby. And I'm sure there's a Sherwood mod that'll smooth it right out.

PLEASE .. do a nice job on the Sher-Mod or farm the work out to someone who can. (I am the owner of a previously butchered 4c.) (Repaired and restored by the author of Drake-Mods, so all is well.)

Re older radios - I recently came across a nice Sears branded Frog-7. Not shabby at all. Downright surprising, in fact. (Don't make me a/b it vs the R4c.)

Re Dayton - I've been the last 4 years - saw several real nice SX-100s, R4b/R4c's, But the pickin's seem to be getting slimmer as the years go by. (Last year there was a real nice / shiny Drake 1a there. Emphatically NOT FOR SALE said the owner.)

To everyone seeking a nice radio at Dayton this year - Good luck in the hunt.

There'll also be some keepers at Dalton, Huntsville and Shelby, as well as other fests, so if you can't make Dayton, don't despair.

It all depends on the card, naturally. <g> Mine aren't that special. But
what I'd give for a Wagner T206, in -any- condition. I've got one or two
from that series, but of course not The Big One.

My parents, God bless them both, bought me a Lafayette HA-230 as a
Christmas gift when I was 10 years of age, in 1959. I had that rig for
13 years without a single problem in all that time.

I remember some very cold, Newark [NJ] winter nights sitting around that
old glow-in-the-dark radio! Staying up all night listening to stations
from around the world or amateur radio operators in the next state.
Became friends with several of those "hams". Great bunch'a people.

Alain...WPE2OLR, the old Newark News Radio Club, circa 1960

Or/and a USB interface for computer control and audio to the PC for
recording to hard disk or remote access. If you do this, please
publish the full specifications so that others can write software -
there are already some very good amateur packages that could easily be
adapted. Bluetooth would be good! If a USB interface is included, it
should optionally be able to charge internal batteries, like the iPod.

A noise blanker that is designed to cope with the modern urban
environment of switch mode power supply, broadband and other
interference. A form of diversity reception may help here.

Second IF brought out to a socket, for PC-based DRM reception.

Airband.

An intelligent memory system, that remembers mode, filter and other
settings. It should be possible to easily set up groups of memories -
not just '7 groups of 10' - that can quickly be scanned through from
the main dial, and also have a 'dump this frequency to first free
memory' single button. If at all possible, get a usability expert or
panel of active BCL listeners to provide feedback on the user
interface design.

My Degen 1103........

Was listening to AM'ers on 3885 this last Saturday evening late.....All sigs were near full-quieting (dem boys do run high power and lots of iron).....using just the little whip while laying in bed. I fell asleep listening and woke up to find the radio dead.....internal batteries died, darn.

Wife was sleeping....no action there either.

Turned over and dozed off.

Mr. Spock's observations about the HF-150 are accurate. However, I don't think there are very many people who've used the HF-150 who'd want to criticize anything relating to its audio or synch detection. I find both to be superb.

People like what they like, though. I really enjoy the 150 and I appreciate its 'minimalist' design, but it won't be everyone's cup of tea.

I just purchased (though it hasn't yet arrived) my first SW radio, the Sony ICF-SW7600GR.

I currently use a little Uniden Sportcat to scan a couple of police/emergency and ham frequencies. Would it be safe to give the SportCat to my little nephew, or are there things that it will pick up that the ICF-SW7600GR will not?

Also, I ordered a copy of Passport 2005 -- if you had to reccomend just one or two more books or websites (hopefully websites) what would you reccomend for the beginner?

How about being controllable from a PC, and also flashable memory banks that could hold program details and schedules for portable operation? The schedule details could show on the screen when tuned in. Flash memory is cheap now-a-days.

DRM support should be built-in, or at a 12 khz filter and firmware should be flashable to enable it (and future digital radio standards perhaps).

Also selectable LSB/USB, none of this forced LSB/USB of the DE-1102 and 1103 portables (below 10 mhz forces LSB, above USB). Fine tuning should be like the ATS-909, in small steps, at the very least not with a tiny, hard-to-use thumbwheel.

And finally, provision for an add-on hardware board that perhaps could be used for XM or Sirius in the future or other Satelite radios.

It's interesting to note that during collisions with soviet subs, the US subs generally came away with more damage. The reason is that the Russians often built their hulls out of titanium, since they sit on the bulk of the worlds reserves of the ore for that metal. For the US, titanium is harder to come by although it is used for many of our fighter planes. It's much stronger than the aluminum used for US sub hulls.

My Zenith Transoceanic, one of the older vacuum tube models, the G500.
By today's standards its big, like a suitcase. Glorious tone controlled
by several sound organ buttons. Off the huge SW whip it's still hot as
a firecracker sensitivity wise.

By the way, the detachable wave-magnet was supposed to be suction
cupped onto the window of your commuter train or airliner. Can't you
just imagine someone today boarding with such a mega boombox? :)

But around the home its more fun than all my modern rigs put together...

Thanks Tom!

I'd appreciate it. I work on a site with all the test equipment, and
if you could post the alignment procedures, it sure would be a help!

The Collins should win this contest hands down. Nothing, to my knowledge,
ever had a lower noise floor. The story is that it was only limited by the
Galactic background noise level. You can't do any better than that.

2637. Question about noise

Newsgroup: rec.radio.shortwave
Date: 2005-02-01 03:24:41 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1107228281.027436.153980@c13g2000cwb.googlegroups.com>
Source record: 6678

Before leaving the topic of noise and quiet receivers, I have a question. Tonight I was listening to a couple of Spanish language stations on 6185 and 6125 khz. On the Drake R8B, there was a background noise behind these signals and in fact behind most of the signals on this particular band. (It sounds like atmospheric noise--a vague, hissy sound that fades in and out a bit, just as the signal fades in and out). On the other hand, when I listened to these two stations on the Lowe HF-150, there was almost no trace of the noise. Both receivers were connected to the same antenna. I experimented with different power sources. Powering the R8B from it's internal power supply vs. an external power supply didn't have any effect on what I heard.

This noise isn't always there, although I've heard it before. What puzzles me is the Lowe receiver's failure to be affected by it. Why was it interfering with the Drake, but not the Lowe? The receivers were sitting right next to each other (I tried separating them, just for the heck of it, but it made no difference.)

Any thoughts?

Steve

Probably the most enjoyable as an armchair receiver was the Panasonic RF-5000b.
It was Panasonic's luggable answer to the Zenith TO and Sony World Orbiter. It was large, heavy around 22 pounds with an absolutely wonderful audio. The polished metal and black case was wood lined, and the resulting sound was delightfully mellow.

It had four antennas, selectable filters (narrow was mechanical), agc control, bfo, multiple bandswitches across the top and backlighting for individual bands as selected. With a mortgage one could power it with batteries. Otherwise a switchable voltage power supply did the trick.

It was no dx machine, but BBC symphonies sounded great. Of course audio on AM and FM were superb. With a bfo switch it was possible to decode ssb. Finding a specific station on the ham bands was hit-or-miss and a challenge. But the intent of this delightful monster was armchair listening to broadcast stations.

Sensitivity when new was not great by todays standards, and 30 years had probably taken its toll on electronics. Still it was a joy to use for 5 years.

There'll be no overlap. Scanners are about VHF and UHF, while shortwave
is shortwave. The scanners lower end would be where the upper end of
the shortwave receiver's tuning ends.

While once upon a time police was in the shortwave frequencies, well
technically medium wave since they were right above the AM broadcast
band pretty much any of those utilities that are now on the VHF and UHF
bands no longer use shortwave frequencies.

You will find some utility use in the shortwave bands, but it won't be
local like the scanner will receive.

I rather figure that that's going to happen, but then
again, having another receiver around to verify
the signal helps too.

You know, I hadn't really considered an R-4 line receiver much, maybe because the run for them was so long (into what, the 80s?). Considering that Dayton is practially the heart of Drake country, I guess I ought to see plenty of them around. I'll have to keep an eye out for them.

On a similar note (not tube related, but about bargains that can be had at Dayton), I passed on a Sony 2010 that someone was selling for $100 back in 2000. I've been kicking myself ever since I got back home...

One last thought. If you don't mind going solid state boat anchor, the Kenwood R-300 is a blast to tune around using it's bandspread, xtal marker. It looks like it ought to have tubes, but the only comforting warm glow will be from the dial lights.

I know better, believe me. I butchered a replacement
of an original speaker with a permanent one on an
old Hallicrafters S20R Sky Champion, and I've decided
if I'm going to fix things, I'm going to go slow and do
it right.

Heh. Wonder if he was putting it out to show off.

OTOH, I suspect that the pickings are getting slimmer
as eBay has worked it's way into the public conciousness.
That might change as some people (like me) prefer
to actually check the radio that I'm thinking of buying
out first.

J: Definately return the Sony if the whip antenna will not rotate smoothly, apparently its a very common problem. After extending the base section of the whip straight up till you can see the bottom, it will then be necessary to tug it up an inch or so more thus pulling out the top of the mount it is connected to. It shold now rotate smoothly. My old ICF SW7600 had a good antenna whip but I bent it up, it being the only fragile thing on the radio which was bounced around off road in a jeep for years, and still plays perfectly.

Hiya,

I have both the Sony 7600gr and the PL-550 which is the exact same radio as the E10. The PL-550 is a nice radio, but the Sony 7600gr is the better performer in just about every category. The only performance advantage that the PL-550 has over the Sony is audio quality. The PL-550 has more defined and better sounding audio. The Sony is way better for resolving signals. The PL-550 in my experience is also prone to overload and images. The Sony is way more selective. The ssb selectable AM sync on the Sony is also a great feature. The PL-550 doesn't even have ssb capabilities. The 7600gr is also a great radio for medium wave dx'ing. Also... When I purchased my PL-550 brand new, I paid half of what the E10 is being sold for. The PL-550 at $60.00 brand new is a TREMENDOUS value. The E10 at $130.00 is not such a great deal considering it is in the same price range with a superior radio like the 7600gr. I really love my PL-550, but I cant see how you'd want to pay for a new E10 over a new Sony 7600gr. IMO, the 7600gr is the best of all the portables out there. I even prefer it over the more expensive Sangean 909 for program listening.

"Tom Sevart" <n2uhc.spam@yahoo.com> wrote in news:368726F4s39tgU1
@individual.net:

I am mostly a broadcast SWLer, so I was thrown for a loop with this one. Very glitzy presentation, just like your local AM station (or FM) might be. I wasn't prepared for the USB aspect of the signal. I just happened to come across the frequency again the next day, and the signal was still good. I listened long enough to hear the "Air Force" mentioned on it, and from the pro-American stance on various topics, I figured that it had its origins here. A short search on the internet revealed more.

The software that I have been experimenting with permits rapid searching of a particular range of frequencies, ergo the contacts outside the range of my usual practices.

I believe that I logged Israel yesterday, an English language show. I was quite surprised. There is some irony in my logging though, the following:

"KOL ISRAEL OVERSEAS SERVICE SCHEDULE

From October 31, 2004 to March 26, 2005

Shortwave broadcasting is due to cease on March 31, 2005"

http://www.israelradio.org/sw.htm

Personally, I am not going to be lugging my laptop every where I go so that I can listen to streamed audio. It's unfortunate that the shortwave stations are falling like trees during a lumberjack competition.

I have had my fill with the lunatic Christian shows. Mind you (you'll think me insane), I am not speaking of Pastor Peters, but the plethora of bitter preachers that claim to be professing "the only" true word (Pastor Peters is comparatively sedate, though he can be crass). Even if you don't follow their preaching closely, they all offer contradicting beliefs, it maddening. It's like Gulliver's Travels, the one group of islanders that hates the other, since one side opens their hard boiled egg on the small end, the other group, the large end. It's still a freakin egg!

I can remember the all time classic just after 911, where one preacher claimed that any person that jumped out of the burning Trade Center buildings, that upon splatting on the ground, their souls continued on into hell (his words, not mine). I guess he viewed jumping from a burning building with no hope of survival was suicide, either that or he believed that since they likely didn't listen to his show, they must assuredly be destined for hell.

Anyway, I really enjoy shortwave, and am sorry to see broadcasters go every month. I have taken up listening to utilities, number stations, and waiting for Pirates to pop up. I shudder to think what may occupy the vacated frequencies. (see last 2 paragraphs).

Soliloquy

http://www.bookrags.com/notes/gt/PART2.htm

"The war between the two empires has gone on for six and thirty moons because of an edict starting by the king's grandfather on how to break an egg. According to Lilliputian law, people must break an egg by its small end. However, those who believe or desire to break an egg at its big end (the Big-Endians), continue to try, finding death or exile. Although Reldresal believes that it should be the prerogative of each individual Lilliputian on how to break an egg, he confesses that some 11,000 Lilliputians have lost their lives trying to change the law."

HF Utility logs
24 Jan 2005 - 31 Jan 2005

2872 - 'Gander' ATC in USB at 0328 wking unid a/c w/ posn rpt & selcall check.

2887 - 'New York' ATC in USB at 0334 wking unid a/c ref trying to get clearance.

2971 - 'Shanwick' ATC in USB at 0443 wking UPS 6718 w/ posn rpt.

3410 - Scrambled speech in USB at 0455.

3435 - Speech inversion scrambling in USB at 0459.

3452 - 'San Francisco' ATC in USB at 0505 wking 'Navy MB547', QSYed to 5547.

4426 - NMN, Portsmouth VA, in USB at 0357 w/ automated voice passing WX.

4426 - NMN, Portsmouth VA, in USB at 0514 w/ live YL voice passing WX instead of usual automated voice. Automated voice heard in background.

5505 - 'Shannon Volmet' in USB at 0544 w/ aviation WX.

5520 - 'New York' ATC wking unid a/c w/ posn report & selcall check in USB at 0414.

5550 - Two unid OM/SS stns in USB on ATC freq at 0547.

5574 - 'San Francisco' in USB at 0548 wking various a/c.

5696 - 'Reach 6026' in USB at 0727 wking Camslant Chesapeake for radio check.

6350 - AFN feed in USB at 0601, Pearl Harbor xmitter.

6501 - NMN, Portsmouth VA in USB at 0607 w/ automated voice passing WX.

6925 - Scrambled speech in USB at 0004. On next night at 0000.

6930 - YL/EE Mossad stn in USB at 0032 rpting SYN5425.

7660 - OTH radar in USB at 0620.

7811 - AFN feed on new freq, in USB at 0626.

8040 - OTH radar w/ slow sweeps at 0628.

8097 - Cuban YL/SS w/ 5F numbers broadcast in AM at 0633.

8202 - OTH radar w/ CW "O" signal at 0642.

8764 - NMN in USB at 2232 w/ WX. Another weaker automated voice station heard underneath.

11226 - Unid stn in USB at 1807 w/ phone patch to DSN number, no joy so advised he would try again. Tried several more times but no joy at number.

11232 - 'King 82' in USB at 2057 wking 'Trenton Military' w/ phone patch to King Ops, reported ops normal.

11232 - 'Oiler 19' in USB at 2118 wking 'Trenton Military' for WX forecast

11232 - 'Trenton Military' in USB at 2211 wking '656' w/ phone patch to Davis-Monthan Meteo.

11244 - 'Offutt' in USB at 2134 passing skyking message, later passed several EAM's.

11309 - 'New York' wking KLM754 w/ clearance.

13354 - 'New York' ATC wking various a/c in USB at 1939.

15000 - Unid stn repeating "Varmint!" in Yosemite Sam voice underneath WWV/WWVH at 1845.

15016 - 'Offutt' in USB at 1847 passing EAM.

17417 - OTH radar at 1945.

17450 - Unid multitone carrier at 1946.

17730 - OTH radar w/ CW "O" at 2055. Also on 17734.

18255 - OTH radar w/ CW "O" at 2149.

Jim,

I take it you are using the sub-receiver of the Orion for SWLing, as the main receiver covers just the ham bands and MARS frequency extensions +/- 10 kHz.

The sub-receiver has poorer SSB sensitivity than the main receiver (.35 uV versus .18 uV) and poorer third-order intercept point (+5 dB versus +25dB at 20 kHz spacing). Have you found this a drawback for DXing, or is your main receive-only use of the Orion for general SWLing (not DXing)? I'm interested in your further comments on this.

Also, I note that both of the Orion's receivers offer just two bandwidths for AM mode. Is this a drawback, or do you like to tune an AM signal in SSB ("ECSS"), taking advantage of the many DSP filter choices in SSB?

I know the Orion is top-notch for ham band use, and its selectable roofing filters for the ham bands help out immensely in this regard. For tuning the SWBC bands, though, the sub-receiver of the Orion appears to be a step down in performance (but maybe I'm missing something in the specs... :^)

From a quietness standpoint, do you find the main & sub-receivers to be equal, given equal bandwidths, AGC, etc.?

73,

Guy Atkins
Puyallup, WA USA

Source record: 6689

Dear JShorr,

I cannot help you with your question about the Uniden Sportcat as I am unfamiliar with that radio. If you can post the frequencies it receives, perhaps then I can answer your question, or others may know and will help you. Certainly hold onto it for now.

I can make recommendations for books and websites. Buy the 2005 WORLD RADIO TV HANDBOOK. PASSPORT and WRTH complement each other; there is some overlap, but little real duplication. PASSPORT is very strong in equipment reviews; WRTH is strongest in station listings.

(WRTH also has a good website:

http://www.wrth.com

and the January 2005 updates to the B04 schedules published in the book are on the site available for free download.)

I buy both books every year. As far as I am concerned, both are essential.

Probably my favorite radio website is: http://www.radiointel.com

I also like this one: http://www.rwonline.com/

There are many others and you will undoubtedly find a lot of sites as you inquire. Make sure you check out Universal's, AES's, Grove's, and C. Crane's sites. Also MFJ's site is very interesting. (These company's sites are primarily for ordering from them, but there is a wealth of interesting information about the various radios and accessories they sell.) You can find their URLs by looking them up on Google.)

Do you subscribe to POPULAR COMMUNICATIONS and MONITORING TIMES? They're not cheap, but they ARE definitely worth every cent they charge.

You'll surely want to join this Yahoo! group:

http://groups.yahoo.com/group/7600GR/

Note: you must have a Yahoo! e-mail address but that is free. Then, with it, you can join any Yahoo! radio group you like. (The most active one I know is the Grundig Satellit 800 group which has lots of useful information not all of which is specific to the Grundig. It is at:

http://groups.yahoo.com/group/Satellit800/)

I wish you the very best of luck with your new radio. I know you will be extremely pleased. Don't forget, there is a learning curve. This takes time and there is no substitute for time. That aside, you should find this radio very easy to use and very satisfying in operation. I firmly believe that it is the best small portable made.

Best,

Joe

Source record: 6693

I thought I had this saved on my computer, but I had to search Google groups to find this from when I had posted it years ago. I need to add it to my website.

How to align the Sony 2010

The Sony 2010 is a great portable receiver. However, it does tend to get slightly out of alignment ever so often. With 100 Herz tuning steps, it does become quite noticable when listening to SSB stations. One step is just a little too low while the next is just a little too high. This can be fixed by simply turning a small pot inside the radio. Tweaking the pot itself is simple, getting to it is kind of tricky.

When I first bought my 2010 years ago, I found that the display was about .1 kHz off. Here are the procedures to align the frequency of the 2010. You may lose the memories as the AA batteries for the radios computer tend to fall out during this procedure. Proceed at your own risk, I take no responsibility for you working on your own radio.

First, place the unit on its face. You may want to place it on a towel or something so you don't scratch the face. Remove the batteries, and then the six screws on the back of the radio and the one inside the battery chamber. Once you have done this, the back of the radio pops off and you can set it aside. You will be looking at a circuit board and the rear of the speaker. Remove the three screws from the circuit board (identified with this symbol: \||/). Once you have done that, carefully remove the circuit board by undoing the clips that are holding it in place. There are two on the bottom, one at top left, and one on the left. Very carefully lift the circuit board. There will still be numerous wires attatched, be careful not to pull any off. Turn the radio around and look at the component side of the board. You will see a metal box on the right side, and a blue pot right next to it, on the left side, in among a few electrolytic capacitors. This is the pot you want to tweak. Attatch the power cord to the radio and an external antenna. Tune the radio to WWV in either upper or lower sideband. Using a plastic tuning tool, turn the pot slowly left or right. You should hear the frequency change. You don't have to turn it very much. Switch between upper & lower sideband as needed until you hear the same sound in either mode. When WWV's tones sound the same in both sideands and AM, it will be right on frequency. Once you have tweaked it to your satisfaction, power off the radio & disconnect the power & antenna.

This is the tricky part. Make sure the flat plastic ribbon cables haven't pulled loose from thier connectors. Turn the radio back around so you are looking at the back, right side up. You have to make sure the volume control and RF gain slide pots fit into the slide buttons. On the front of the radio, slide the volume control all the way down. Do the same for the

RF gain. There is also a slide switch on the side marked TONE that you must also make sure is set in right. After you snap the circuit board in place, move the slide switches up & down to make sure they are working properly. Replace the three screws that hold the board in place. At this point you may want to power up the radio to make sure it is working properly . If so, replace the back cover, taking care that the blue & black wires at the bottom of the circuit board underneath don't get pinched. Replace the screws and you're done.

2654. Re: DEGEN DE1108 worldband receiver is now in preliminary design stage, any one has recommends on it?

Dear Sir,

I should also like to add one more item to my list posted previously:
all memories and the firmware should be non-volatile. Should battery
and AC power be disconnected, all information should be retained
permanently (until changed by the user).
All my best wishes for the success of this forthcoming receiver.

I'd hazard a guess that the digital circuitry in one radi does not exist in the other and that circuitry is causing some noise in the other receiver. On the other hand, maybe the sensitivity of one receiver is different than the other. was the gain on both receivers set the same ?

Source record: 6696

Dear Jerry,

If you've read some of my previous posts, you know I own a Lafayette Model HE-10 receiver, along with its associated speaker, the HE-11. I bought these in April 1962. At that time I also bought a pair of Clevite "Brush" BA-200 headphones. I still have all of these and they still work as well as they did when new. (The only "service" the radio has required is a few tube replacementts.)

This was my main short wave radio for 38(!) years until I bought a Grundig Satellit 800 in 2000. Last year I bought what I consider to be the finest short wave radio ever made, the AOR AR7030 Plus.

I have never owned (or even seen) a radio that performs like the AR7030. But I will always have a "soft spot" in my heart for that old Lafayette. Every couple of months, I turn it on, wait a half-hour for it to "settle down," and then search out signals, just like in the old days. Even with the same antenna as on the AOR, there is no comparison in sensitivity or selectivity, but there is (and always will be for me) something "magical" about that old radio!

Best,

Joe

Three stand out from the pack for us:

Classic radio: Collins R-392, the watertight "little brother"
to the R-390/A. (this was the only radio I ever owned that
I could squirt with a garden hose in the backyard on a
95ï¿œ F Summer day, while it was still turned on, and it kept
right on playing !!)

Modern radio(s): Drake SW-8 and the Yaesu-Musen FRG-7.
(..the Drake SW-8 was rather quirky in it's control pad layout but
it was great to put in a few D-Cell batteries and take it camping)

Hi Brian, Not sure where you came up with those damage assessments, but the hull steel on U.S. Submarines was made of HY-80, an extremely tough steel alloy that can withstand the kind of rock-collision that the USS San Francisco just survived. On my nuclear submarine, there was no aluminum in the pressure hull, or frames of the boat.

Here's a little tribute to my shipmates in the Silent Service:

http://members.cox.net/223bthp/subs.htm (Turn speakers up)

Jack

In EU maybe, but here in the states I have never had the 150 overload- even
when on a 4 element 20M yagi

> the IF filter options are very limited, TWO !
>
But those 2 are nice filters. AM sync with the narrow filter sounds fine -
still has lots of highs.
> has no features to speak of, like bass and treble
>
True- the SP-150 fills it out nicely, but they are not cheap. And having to
use it gets away from the portability.

short battery life
Not an issue with the NiMH batteries- mine with backlight goes well over 12
hrs.>

2666. ICOM 737 keyer problem

Newsgroup: rec.radio.shortwave
Date: 2005-02-01 05:25:14 UTC
From: n9ejs@yahoo.com
Message-ID: <1107235514.582523.182610@f14g2000cwb.googlegroups.com>
Source record: 6606

I have an ICOM 737 and I'm about a 75% c.w. user. It's been working great with no problems - until I turned it on this evening. The keyer won't make dots. The dash side is o.k.

I checked out continuity of the plug, cord and the keyer paddle. When I short the dash side conductor of the 3-conductor cable to the common conductor, it makes dashes. When I short the dot side of the 3-conductor to common, nothing happens.

When I hook up my bug to the jack and put the key switch in appropriate position, the bug works o.k. But when I go back to the keyer, still no dots.

This leads me to the conclusion something is wrong with the jack on the back of the rig, or the internal keyer circuitry in the rig.
Anybody had any experience like this??

Thanks and 73

George

2.5 in AM????

Isn't that a tad narrow for AM???

The numbers vary depending on who you're talking to, but it's always between
50 and 70...and they're in widly varying conditions. Naturally, someone will
now go and find a site where they claim differently. <g>

> It said Brian Seigel has a good number of the T206

Given all the talk about grounding systems on this group in the past, I
think most of us here know that a good RF ground wire must be short to
avoid introducing too much inductance into the grounding system. I asked
the question because I wanted to know more about the relationship
between a good (short) RF ground wire and a ground radial system. Does
one work better than the other or should both be used together? Where's
John Doty when we need him? :-)

It seems the times are changing. 'Mfd' has always meant micro-farads in the US but with the large capacitors being made now, 'uf' is becoming a better notation so it's not confused with 'milli-farads' for the big caps'.

The Sportcat is for VHF/UHF and the 7600 for HF (shortwave); totally
different frequency ranges. You won't receive police/fire/VHF-marine
etc with the Sony so if that capability is important to you hold onto
the scanner. Of course, you could still give it to your nephew and
replace it with a new scanner for yourself.

Good advice. You could replace the speaker inside the MS8 (box) with one
that has a tweeter (coaxial) and probably achieve the same result. Then
you would have an MS8 that sounds like a better speaker but still
matches the R8B.

You can buy scanners with complete frequency coverage (including
shortwave), like 100-Khz to 1300-Mhz. One model is the Yupiteru-7100E.
Costs about $300-US.

I guess I got the most enjoyment from my old Hallicrafters S20R many years ago. I heard more stations on that radio than any since, which shows that you don't need a high end receiver to have a lot of fun with shortwave. I also enjoyed the Sony-2010 because it was so far advanced for it's time, when it came out in the early 80's. I now enjoy the R8B the 'most'. :-)

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

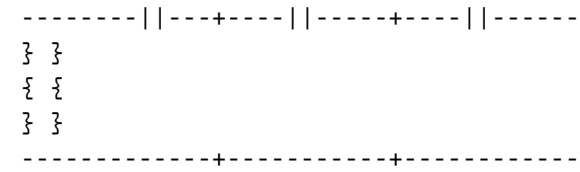
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

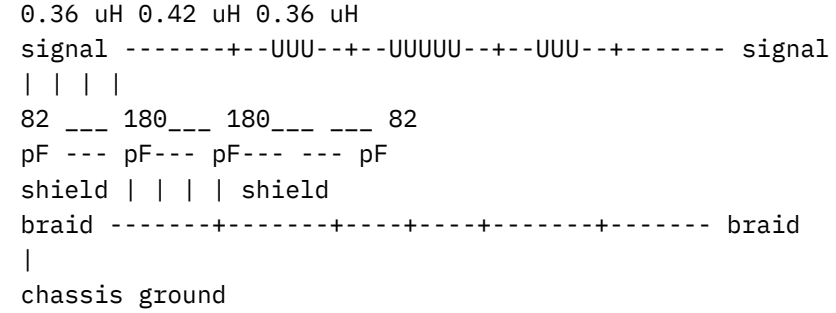
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Put the '170' back on Ebay and advertise it for Ham's. Then you can buy
another radio, like you need more! :-)

It's not a bad tiny portable for receiving strong stations, but don't expect great things with an external antenna. I found that with just a 20 foot wire that medium wave stations bleed into SW around 6000 khz.

SSB tuning is possible but not practical.

MW DX is okay but not great, but again, the radio is tiny.

jimg wrote:
it's always important to keep the ground wire length well below 1/4 wavelength of the max freq your interested in. Assuming it's short enough to prevent distributed effects, the self inductance of a straight 16ga wire is about 0.33uH/foot...so 50' at 10MHz is about 1Kohm...thats a fair amount of impedance and is why you pick up all that noise.....

so what's the ground radial system do? in short, it provides the counter-poise to the wire strung in the sky. the antenna-ground system create the differential signal which is applied to your receiver's rf amp...the better the ground poise, the more 'sensitive' your antenna...is this some kind of linear relationship? like double the ground system and double the antenna sensitivity...nope , not that simple and there's not enuf room here to make all the variables clear...but the better the grounding system, the better your antenna will "work"...some ppl have a good enough conduction under the soil that a simple 10' ground rod intersects this "layer" and the dx cpmes rolling in...other ppl have rods sunk in the earth and buried in wild patterns all over the yard to get the same effect.....

so the simple answer(s) is: your ground wire length influences noise (what we call common-field) pick-up so shorter is better; the ground radial system improves the signal strength at the receiver input...and i hate simple answers to a very complicated system...

jimg wrote:

first disconnect the antenna from both receivers and short the antenna terminals...turn up the rf gain and audio...both real quiet, i bet? good.

then it's from the antenna-ground-rf front end combo... are you using the 50ohm input on both, or the long wire input?

lets say, the long wire inputs....well, i doubt they have the same input impedance...if your not using coax and don't have a reasonable impedance match, then the antenna's are going to act very diffferently...(how are they grounded? tied together? hmmmm)

if your using the 50 ohm inputs, have a well designed antenna with good matching, then we have to discuss the reactive component at the antenna input...and even the selectivity of the first if stage.... you really want to know, we'd have to take 'em into a lab with very controlled conditions to trace out the diff...but it's not magik...just complicated

Dale,

which piece of equipment is deemed more important for the 150. The
preselector or the SP-150? I was thinking for the money that those items
cost, one could buy a DSP unit for the 150 instead.

I have been listening to them for a while now.
I live in Florida and two of the stations are down here in Key West Florida.
I was getting the frequencies in great a few months ago on 7507 USB. Then,
after all the hurricanes down here, I never got them in as good as I used
to. In fact, it got so bad I couldn't listen to them at all.

About 2 weeks ago things started to change for the better. I can now pick up
7811 USB very well most of the time. But there are times when it's just too

weak to make out. I really like this station though. Interesting to listen to.

The other station I use is 5446.5

"Little brother"? Nothing little about that bad boy! I heard that, at
one time, the R-392 was five feet tall and then someone dropped a
pallet of bricks on it and squished it down like that! ;) (I've had one
of those- great radio!)

Did you ever put D-sizes in the FRG-7? I don't own one but a friend
does. He's never put "D"s in but it is possible.

Some where i thought that I had read that
Tecsun GEM China (PRC) 'owned' or was
a major share holder in Degen.
? Now Is That True ?
.
i want to know ~ RHF

Actually Degen used to be a subsidiary of Tecsun several years ago, the main business is radio sales, aftermarket service and Electrical Design, no production line, some Tecsun's radio electrical designing was come from Degen, but now Degen was completely separated and independent, Degen has full capacity on receiver designing, mass production and has own sales channel, Degen become a powerful competitor of Tesun thus far , sure some Tecsun's shareholder has shares of Degen, but it absolutely not affect the competitive situation. once tecsun bring out a new model, then Degen has a similar one to compete, for example: Tecsun 9700DX~Degen 1107, Tecsun PL550~Degen 1103, Tecsun PL350~ Degen 1105, Tecsun PL200~ Degen 1102, now Degen are building the flagship of DE110* series , we would like to see what does the Tecsun bring to desk

Yes, it was possible but I don't recall the battery holder as being standard
equipment. I think it was offered as an accessory.

Thanks for all of the input guys.

Although the noise sounded like atsmopheric noise, part of me thought it might be something else...and I turned out to be right. After staying up half the night, I discovered a laser printer that had been left turned on in a different room. I turned the printer off, not really thinking that it would be the cause of the noise on the Drake. But when I then walked into the room where the Drake sits, it was on and there wasn't a trace of noise. Just for the heck of it, I had to turn the printer back on to see if the noise returned...and it did.

It's amazing to me that the Drake could have been affected so much more severely than the Lowe by the noise from this printer, but now I'm just glad that the noise is gone. Everything sounds the way it should now.

Yes, your group does look like a radio club. Do you share loggings.
When your group is listening to radios while in the city, is signal
interference as big a problem there as it is here? Some of my neighbors
have very noisy power tools and appliances.

EMI interference is also a big problem in CHINA, especially in SW low band and MW, some home appliance has not passed the EMI test will generate a lot of interference, the only way to got the better reception is use a loop antenna or a out door dipole.
another problem confused the listener is the powerful jamming signal, Chinese folk music all over the whole SW band, sigh!

If cheap is the main consideration and you can do without the Digital Readout ...here are two Oldies but goodies that at times can be found on Ebay at under $100.

First is the Realistic DX-160 . Its solid state and doesn't take a lot of shelf space and is more sensitive than most portables out there. It also has a BFO which can be used for SSB and CW reception. While not the most selective, it beats the cheap portables.

Another radio is of the Boat Anchor variety. Its bigger and bulky and uses TUBES. Its a National NC-183D. It is both selective and very sensitive below 20 MHz or so. Its a real radio for AM Broadcast Band reception too. Wish I still had mine.

If you mean folks who are critical of the war, you're probably right.

I don't count on the election turn out getting all the insurgents to give up, but it's got to hurt their morale, and more importantly it'll be good for the morale of the people of Iraq.

People who voted "stood up to bullies", and they're feeling good about it.

It's just another step on the path to freedom for them, but almost 3/4 of them were willing to face uncertain risks to take it. That's encouraging.

> of those- great radio!)

Well, I never dropped my R-392 on purpose, but the solid
aluminum "crate case" it was supplied with could likely
take a beating. (mine also had the original S-meter in it)

Sold it at a hamfest in 1983 for $75.00 - biggest mistake I ever made.
I even had the case re-painted in OD powder coat paint by a custom
paint shop via a friend who worked there and owed me a favor.
Someplace somewhere in some basement someone has a near-mint
R-392 that I have yet to see on e-Bay.....(grin - sort of)

> raoul

I still have the SW-8. (No longer have the FRG-7)
Gave the FRG-7 to a local 11 year old who wanted
to get his ham licence. Never used batteries in the
FRG-7.

Still have the SW-8 which I consider a very under-rated radio.
I am very happy with this Drake and will never sell or part with it.
Rather quirky controls and button layout, one needs the manual
to get use it properly, but it's been a very solid performer and
is great for evening SWL'ing in the pop-up camper at the campground
in the Spring / Summer. Toss up a 25' length of wire and it hears
everything.
Put 8 Eveready classic carbon-zinc "four for a dollar" type D-Cell
batteries
in it and it plays for about 9 hours batt life.

Mike, what exactly does the R8B do that the R75 falls short on? Overall, the
reviews seem to indicate that the popular tabletops available are very close
in capability.

>
> raoul

3 or 4 times every year, I do. Expect decent battery life
with headphones on and dial lights off. I think a gel cell
might be the way to go, though, or NiMH batteries, and
am looking into this.

The battery boxes on the FRG7s you might see for sale
nowadays are getting more rare. Folks tended to leave
batteries in the battery box, and they would leak, destroying
the assembly.

I think the FRG7 is the most fun receiver I've ever used,
and to tie in with another thread, it's really very quiet.

Overall, it's a wonderful radio for everyday use - my other
radios rarely are used.

73,

Steve

Yes I know. Electronic appliances, computers, controlled lights, etc.,
here in the U.S. are supposed to meet standards for radiation. The
amount of noise is such that I think the rules are not enforced.

The only way to get away from all the electronic noise is to go out
into the country and power the radio with a battery.

Great combination - you will have no overlap and wide coverage. I did the same thing with a Sony ICF2010 and Radio Shack 2006 scanner for several years.

Depending on your location check out either the Police Call or Scanner Master books on the scammermaster.com website for frequencies. In my experience Scanner Master was more up to date.

Dear Sir,

At the risk of posting too much, may I say that I understand that Degen is one of China's leading radio manufacturers. As such, I hope that the design of this radio is a "no-holds-barred" short wave receiver of absolute top quality. Ergonomics especially should be user-friendly. Menu-driven radios are perfectly acceptable IF the owner's manual is comprehensive and complete. (I own an AOR AR7030 Plus, the best performing radio I have ever owned, which I find very easy to use due in part to its superb owner's manual. Though menu-driven, its ergonomics are superb.) NO "FRILLS" (such as a "fake" analog dial) should be on this radio; everything incorporated should be there for a distinct purpose: the best possible reception of the signals desired.

I sincerely hope you will take into consideration my suggestion to incorporate the various new terrestrial digital reception modes. It is not necessary (nor, in my opinion, desirable) to incorporate XM or Sirius satellite "pay" reception into this forthcoming radio. Satellite radio can better be served by another separate receiver.

As I stated above, ABSOLUTE TOP QUALITY in DESIGN, COMPONENTS, and CONSTRUCTION QUALITY are of PARAMOUNT importance.

Degen should market this radio in the USA under its own name. If the radio is a great one, this will give impetus to awareness of the Degen name in the United States.

I believe that, if any company can design and market a near-perfect short wave radio, Degen is that company.

Best,

Joe

>

Regarding the clocks, I suggest making it possible for the user to disable
the automatic time-setting based on the radio time signal.

Every once in a long while, radio-controlled clocks can mis-read the signal.
I had a radio-controlled clock radio misread the DST information, and it was
exactly 1 hour off for the next day! If you're relying on the radio to wake
you up in the morning, this could be a problem (not likely, I'll admit, but
I've seen it happen). Alternatively, design the radio controlled clock
logic so that it makes a couple attempts to read the signal, and only update
the clock if the results are consistent.

If the HF-150 were my only or my primary receiver, then I'd spring for a preselector, though probably not the PR-150. There are cheaper preselectors that, I'm told, work fine with the 150. Same goes for the speaker. Unless I wanted to put together a matching set for 'collector' purposes, I'd look elsewehre.

My two cents...

Steve

2731. HF-150 Europa on Ebay?

Newsgroup: rec.radio.shortwave
Date: 2005-02-01 16:21:23 UTC

Take a look at auction number 5748673688. One concern I'd have about this auction is that the receiver in the photo in this ad does NOT appear to be an HF-150 Europa. The Europa had "Europa" written at the bottom of its face place, as seen in this photo: http://www.rys.nl/hf150e.html. What's pictured in this ad is a standard, black case HF-150...not a Europa. Now, maybe the seller has a Europa, but pulled an image off a website without looking at it too closely. Either way, I'd certainly get clear about this before bidding. In fact, yet another complicating factor here is that some of the standard HF-150's have a backlight option installed. This makes them harder to distinguish from Europas.

A lowly Realistic DX-120, a Xmas gift from the folks, will always have a warm spot in this hipster's memory. Even designed a regen mod, which boosted signal reception. After garnering a QSL from ORF Vienna, Austria, one of those grizzled tech sarge's said that pup didn't have enuff guts to snag a signal that weak. He swore(literally) that I'd used another sarge's Hammarlund. That 120 didn't survive time's ravages as well as its' replacement DX-160(still goin' strong, but replaced by a Yaesu FRG-7). But that 120 was as seminal in cultivatin' an interest in shortwave as a tubed Fisher professional amp was in germinatin' a hi-fi addiction! B.T.W. pismoclam, had some of that legendary Pismo Beach clam chowder in breaded bowl a few years' back enroute to Santa Barbara. ' Twas da B-O-M-B Bubba!!!

More to the point, what does your question have to do with Degen radios
and shortwave listening. I am impressed that the designer of the DE1103
has given us some insight into that radio and more importantly has
asked the SWL community for suggestions on how to design a new radio.
That is a first for me.

I think we should focus this discussion on Degen and their shortwave
radios. And I'm sure you agree.

Go back and read the question I asked again, 'tard.

Read it 3 or 4 times if you have to.

Boggling, just how many damn 'tards there are in this hobby.

Sheesh...

I once had an SX-28. I'm *really* sorry I sold it. It went
magic places in the midnight hour.

2738. Longpath African Loggings

Newsgroup: rec.radio.shortwave
Date: 2005-02-01 17:17:06 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <QLGdnTjxjIwPJGLcRVn-tw@comcast.com>
Source record: 6779

BOTSWANA 4930, 1615-1622, VOA Feb 1 on their new 60mb frequency. Interview with a NASA official discussing the upcoming space shuttle flight, and the issues with the heat shield tiles and integrity of the insulation on the booster fuel tanks; questions from phone callers in Kuwait and elsewhere. VOA ID at 1630 and into news. Good signal at one hour past local sunrise. A short MP3 with VOA ID can be heard here: http://www.guyatkins.com/files/voa_botswana_4930.mp3 (Atkins-WA)

SWAZILAND 4760, 1609-1615, TWR, Mpangela Ranch Feb 1 Presumed, with male in unid. African language (listed as Tshwa in WRTH). The pace and tone of the talk sounded like a sermon; hymn or religious song at 1615. Best on SW antenna during near-grayline condition. Fair-good level, and strengthening slowly. Slight co-channel interference from presumed AIR Port Blair. (Atkins-WA)

ZAMBIA 4910, 1558-1605, ZNBC Radio 1 Feb 1 Best reception so far this winter of Zambia on longpath. Nice fish eagle IS at 1558, drums at 1600, and announcer with 'ZNBC' and mentions of Zambia in unid. language. Into a tribal chant or similar by male, followed by a choral hymn, and into possible news items 1605. Fair to good signal at tune-in, and still fair at 1635 recheck-- 1 hour past local SR and 1/4 hour past Lusaka SS. Best on Southwest Beverage. (Atkins-WA)

Guy Atkins
Puyallup, WA USA
mod. ICOM IC-756Pro & mod. ICOM R-75

A couple of points. To make such a statement you apparently have intimate knowlege of their financial condition and ownership. Perhaps you would care to share it. What are the percentage of ownership of the major stockholders and are dividends paid to all classes of shareholder. Please give us details of any cross ownership between this company and other commercial companies and development banks. What are the wages at this company. Does the company transfer funds to its owners by management fees in addition to dividends?

You indicate a concern about buying products from non north american countries. Have you noticed that most of the clothing, appliances, cars and indeed almost all consumer goods are not from the U.S. To not have noticed you must have had your head firmly planted in the sand for several decades now. To not buy from developing countries would be all but impossible from an individual standpoint and pretty foolish for the U.S. as a global economic force.

Ok then

I passed up on a PR-150 and Sp-150 that were on Ebay. They both had a Buy it Now price of $250 which I thought was too much anyway. The SP-150 looks good though and has the notch and s-meter.

The first power supply I built, in the early seventies, I bought at
a hamfest a 10,000uF capacitor with about a 16v rating. Big stuff at
the time. It's the size of a Coke can, and has those screw terminals.
"Computer grade" was what similar capacitors in the surplus store
ads were called.

Pretty useless these days, given that you can get bigger capacitance
and a higher voltage rating in a much smaller package.

Well put. It's good to keep it simple! Some re-emphasis:

RF GROUND is at the transmitter-side, where avoidance of 1/4 wave length prevents monster impedance that is not felt as ground at all. A short path to multiple ground rods connected in parallel completely avoids this 1/4 wave effect no matter what frequency you xmit on. XMTR RF GROUND has no effect on receiving at all, *if * the static grounding and radials (below) are used.

STATIC/LIGHTNING GROUND is grounding the coax-shield at several points, beginning right outside the shack, at the base of a wire antenna or tower, mid-point, and top of tower.

RADIALS are for reflecting transmitted energy from the antenna that would otherwise be lost (absorbed) by the earth. They have a much smaller but measurable benefit to the receiving aspect of any antenna. They can be above ground (right under an elevated vertical, where very short lengths work), along the surface of the ground on a ground-based vertical, or buried in a

large pattern around a vertical, center-fed inverted-L, or in some cases, random wires or inverted-L's. A 1/2 wave horizontal dipole is a "complete" antenna and has no benefit from radials, but it must be elevated sufficiently to avoid ground losses. The coax-shield of feedline to a dipole should still be grounded per above para.

--

WARNING: That ground screw on the back of your receiver set could get you in more trouble than it's worth. First, the receiver-case is already grounded via your home's electrical system. Noise and static on the coax-shield should be shorted to ground outside from coax-shield grounding. If you connect your receiver to a separate outside ground, you have major lightning issues if you leave that receiver-ground connected during storms. This is true even if *everything* else is disconnected. If any tree or structure within up to several hundred feet of your property is struck by lightning, your ground system will be a sink for some of that energy, and draw it right into the radio via ground connections. Of course the antennas would add to this problem, but most people remember to disconnect them before a storm. Putting disconnected antenna feedlines in a mason-jar is an embarrassing practice that I got away with for about ten years, and I'm sure many hobbyists play the same odds. Better than nothing (which is the glass-jar trick) would be to short the antennas to an RF-ground, if you have one.

If you decide that a separate receiver-ground is important, you should consider what you will do with that "hot-wire" before lightning occurs anywhere in a wide-area around your property.

I think this will be supported if the main customer target is the government. however consumer support will be questionable.

Ten-Tec is very government driven at this time. and they will bend over backwards for them. they don't seem to care much for "regular people" however. that is the problem with the 350, if the 350 was a Government item, there would have been updates last year.

For the old-time romance of knob-twiddling and the feeling of
"listening to the world": The '37 Zenith blackface. For the sheer
capabilities and ease of use, the Icom R-75.

Tony

2752. Need SW portable w/clock+alarm

Newsgroup: rec.radio.shortwave
Date: 2005-02-01 18:49:15 UTC
From: saki <saki@ucla.edu>
Message-ID: <Xns95F06E1D08D07sakiuclaedu@169.232.47.140>
Source record: 6796

My faithful Sony ICF7600, which I bought in 1990 and have kept more for sentimental reasons than performance, has just gone to sleep, more or less. Clock still works but power switch, light, controls are unresponsive either on batteries or power supply. For several years I've used it only as a clock and alarm, mostly.

I have plenty of other SW radios for listening and DXing, and for travelling I've tended to prefer my Kaito 1102, so I'm looking to replace the Sony with something that has reasonable audio for a radio of similar size, decent SW/MW/FM, not too expensive, just for bedside and wake-up use.

Does anyone have any favorites? If there's something that works nicely as a travel radio it might become an alternate choice for trips.

The Sony 7600GR looks nice but it might be more radio than I need and it would be good to keep costs down.

Suggestions welcomed, thanks.

Quite honestly, most folks knew years ago that TEN-TEC provided poor customer support for radios that were supposedly 'upgradeable'.

Maybe one 'upgrade' and that was it.

Buy a good radio, buy Drake.

My own 2 cents.

(OT) - About - GI Death Benfits
"Doing-Right-By" Those Who Serve and Die for Their Country.
.
SU <SU****54@p**pl*pc.c*m> wrote:
.
Please pass this on!!!
.
Rush is definitely controversial.
I think he got this one right!
Love him or loathe him,
he nailed this one right on the head...
.
By Rush Limbaugh:
.
I think the vast differences in compensation between victims of the September 11 casualty and those who die serving our country in Uniform are profound. No one is really talking about it either, because you just don't criticize anything having to do with September 11. Well, I can't let the numbers pass by because it says something really disturbing about the
entitlement mentality of this country. If you lost a family member in the September 11 attack, you're going to get an average of $1,185,000. The range is a minimum guarantee of $250,000, all the way up to $4.7 million.
.
If you are a surviving family member of an American soldier killed in action, the first check you get is a $6,000 direct death benefit, half of which is taxable.
.
Next, you get $1,750 for burial costs. If you are the surviving spouse, you get $833 a month until you remarry. And there's a payment of $211 per month for each child under 18. When the child hits 18, those payments come to a screeching halt.
.
Keep in mind that some of the people who are getting an average of $1.185 million up to $4.7 million are complaining that it's not enough. Their deaths were tragic, but for most, they were simply in the wrong place at the wrong time. Soldiers put themselves in harms way FOR ALL OF US, and they and their families know the dangers.
.
We also learned over the weekend that some of the victims from the Oklahoma City bombing have started an organization asking for the same deal that the September 11 families are getting. In addition to that,

some of the families of those bombed in the embassies are now asking
for compensation as well.
.
You see where this is going, don't you? Folks, this is part and parcel
of over 50 years of entitlement politics in this country. It's just
really sad. Every time a pay raise comes up for the military, they
usually receive next to nothing of a raise. Now the green machine is in
combat in the Middle East while their families have to survive on food
stamps and live in low-rent housing. Make sense?
.
However, our own U.S. Congress voted themselves a raise. Many of you
don't know that they only have to be in Congress one time to receive a
pension that is more than $15,000 per month. And most are now equal to
being millionaires plus. They do not receive Social Security on
retirement because they didn't have to pay into the system.
.
If some of the military people stay in for 20 years and get out as an
E-7, they may receive a pension of $1,000 per month, and the very
people who placed them in harm's way receives a pension of $15,000 per
month.
.
I would like to see our elected officials pick up a weapon and join
ranks before they start cutting out benefits and lowering pay for our
sons and daughters who are now fighting.
.
"When do we finally do something about this?" If this doesn't seem fair
to you, it is time to forward this to as many people as you can.
.
How many people can YOU send this to ?
.
- -
.
SU,
.
The pay-out to the Sept 11 Victims was so they would not sue
the US Airlines for the use of the Airplanes in the Attacks.
.
But I agree that the Members of the US Military who die in
the Line-of-Duty are Rightfully Due More for their Families.
.
I would Give Them Less Cash and More Life-Time Benefits.
.
Combat / War Zone Death Benefit :
$100,000 Benefit Paid to the Spouce or Parents.
$25,000 Benefit Paid for each Child.
Plus $10,000 Burial Benefit
.
NON - Combat / War Zone Death Benefit :
$40,000 Benefit Paid to the Spouce or Parents.
$10,000 Benefit Paid for each Child.

Plus $4,000 Burial Benefit
.
For The Spouce :
Automatic $1500 per Month for the Spouce via Social Security
and if they re-marry the it is Reduced to 50% $750 per Month.
Plus a Four Year Full-Time GI Education Re-Training Benefit
for the Spouce of $1250 per month. Or a Part-Time GI Education
Re-Training Benefit for the Spouce of $825 per month. (Six Year Limit)
NOTE - This Gets Paid for out of Social Security NOT
out of the DOD Annual Budget.
.
For The Children :
Automatic $500 per Month per Child via Social Security until
they are 18 years old or 25 years old if they are in School or
a Career Training Program. Plus a Four Year Full-Time GI
Education Re-Training Benefit for each Child of $1250 per
month. Or a Part-Time GI Education Re-Training Benefit for
the Children of $825 per month (Six Year Limit).
NOTE - This Gets Paid for out of Social Security NOT
out of the DOD Annual Budget.

The Kaito KA-1101. No sideband, 3.00 to 26.11 mhz. It has good
shortwave, excellent MW and FM, and you can wake up to a beeping
noise or the radio. $75 from most places, $50 at surpluscomputers.net.
Search for "radio" in the search box there.

The previous seller apparently didn't bother to check what they normally close for, and put it up with a low "Buy it now".

On the difference between the Europa and the regular HF-150, I'd take the Europa. The input filtering is likely to be more useful than any loss in sensitivity.

Source record: 6855

A bit late, but I'm just finding this.

D, since no one's answered what I think you're really asking here, you'll have to tune in at 5:30 a.m. Wednesday and Friday mornings, then it's repeated every five hours two or three more times during the day.

Alternatively, and IMO preferably, you can hear it in stereo and EARLIER!

It's on BBC's radio 4 on Tuesday and Thursday evenings at 9:30 PM your time at this link:

www.bbc.co.uk/radio4/

The BBC7 episodes others refer to are older shows from 1999. They're on four days a week on BBC7.

...
and if you care to join a low-traffic discussion list, please find us at:

Westwayfans-subscribe yahoogroups.com

Hope this all helps! Nice to see another listener--I'm in the states, too.

CJ

I highly recommend the Degen 1103. It is the best overall SW portable I have used. Does about everything well.
Very sensitive off the whip. It takes rechargables, which is great. No regrets buying it, and plan to keep it for many years.

i just started listening to shortwave again after being away from it
for aobut 10 years. I seem to notice that the short wave bands are
totally dominated by nothing but religious subjects and shows. Am I
just listening at the wroing time or wrong bands or does anyone agree
with this observation?

I disagree. I'm hearing BBC right now on 6195 kHz.
Later I'll listen to Radio Bulgaria on 7400. And Havana on 9550.
What receiver and antenna are you using?
Try this for English language schedules...

My first SW radio, an unkwon Zentih.
Then My Heathkit GR64., with a Q-multiplier no less.
The excitment of discovering SSB and CW.
Then the Friday my first R2000 arrived.
My wife and I took off work, took her VW transporter
(a bigger version of the MicroBus) to the Red River
Gorge for a mini-DXepiditon.
I was hooked on the R2000. Smooth tuning, great sound.
Well thought out controls for the user. It is still my favorite
SW radio. So much so that I bought another when the
opertunity arrose.
For the mini-DX events we now use a set of DX398s,
good, small radios, but not a R2000. My wife insisted
on a SW of her own when I bought the first DX398
on closeout at radio shack.

Parts for the 2800/2900 are long out of stock, so buying a parts radio
is probably the best you can do. Maybe you can share the cost with
someone that needs parts for their 2800 too. If I were you though, I
would buy a 2900 which has more features than your 2800. The antennas
should be the same. Good luck.

> with this observation?

Welcome to the world of shortwave broadcast. Yes, there are way too many religious broadcasters on shortwave nowadays, most of them from the US beaming programs to primarily US audiences even though the FCC says it's illegal to broadcast to US audiences on shortwave.

However, there are many other english-language programs from other stations out there, you just have to search through and find them. When you find them, the programming can be entertaining. 7415 evenings has WBCQ from Maine with various types of programs, even though they also carry religious programming.

The reason there is so much religious programming on shortwave is because the only groups that can reliably raise the money needed to air such programs on shortwave stations are religious groups, not to mention the ambition of spreading their message to a worldwide audience.

So you can either search for the non-religious programs to listen to, or else listen to utility stations like I do. All the religious programming is probably one reason I never really got into SWBC listening and just stuck with the utes.

Parts are plentiful- however, due to insurance reasons, Lowe no longer ships
to the U.S. You would have to find an intermediary in EU. I stocked up on
displays, mixer and CPU's some time back.

You likely have made the trouble makers list: Radio-Mart also reserves the right to ban/remove ANY bid(s) from ANY individual for ANY reason. We do keep a Blocked Bidders list for ALL non paying bidders as well as trouble makers.

I wonder if Radio-Mart would honor the ability of a buyer to cancel his purchase after the completion of the auction? Probably not. Can buyers publish rules for sellers? If you haven't cancelled a bid or reneged on paying in a timely manner for an auction, I don't see why the seller can cancel your bid simply because you questioned his veracity.

And this: **All items you see pictured are pictures of the ACTUAL item being sold and are copyright of Radio Mart Inc.

I am sure that Universal Radio would be astounded by that statement.

2781. opinion on radios for new listeners

Newsgroup: rec.radio.shortwave
Date: 2005-02-02 00:50:41 UTC
From: Brian Hill <releif@last.net>
Message-ID: <MxVLd.61$fO.31@fe07.lga>
Source record: 6876

There's always a lot of talk about what radio is better or best or which radio should I buy. I have a hard time giving advice on the subject because there are just too damn many variables and allot of new hobbyist get the idea that if they shell out big $ and buy the latest state of the art radio that all their troubles will be over and they can finally collect that elusive QSL. Hey don't get me wrong, I'm all for buying the most radio you can but lets face it most peoples reception problems have little to do with the radio and there are plenty of good radios to choose from and the differences of one good radio compared to the other is hard to define unless you got some experience and a good ant/grd etc... The reason I'm saying all this has to do with these comparisons like the R-75 with Kiwa mods compared to the R-8B etc... Yea the R-8B has the edge but not by such a margin that a new listener should rule out the R-75 or other good rigs. Yes I know you seasoned vets are going " Brian we know all this but what's your point?" My point is there are a lot of new SW listeners lurking around here and I want them to know that there are a lot of good results being obtained with a lot of older gear and good antennas. I've been DXing for a long time and all I use is an old R-5000 with a very good ant system and a few audio mods and I'll run with the best of them. Moral is- Buy as much radio as you can afford but $s don't garentee results, that takes experimenting , research and work to get the weak ones.

Steve,

If you are picking up noise off the printer and have no additional
AC outlets. Try getting a Notebook Surge Station and Noise Filter
from Radio Shack, part nbr 61-2327. They can cut alot of the AC noise.

That's a good start. The radials make the signal stronger and a good RF
ground makes it quieter. Both add to the intelligibility of the signal.

Brian, over the past thirty years, I have used : an old tubed RCA, a Realistic dx-160, a Sony 2210, a Sony 7600gr, and my Kenwood ts-50 to listen to shortwave dx. I agree that if you enjoy the hobby, then buy "all the radio that you can afford", but even the best rig is useless without a decent antenna. If a listener does not have access to a place where he can string up some wire, then a small portable with whip antenna will be all the radio needed.

Seems to be a good night for medium wave..

As usual the following are booming in.

1100 WTAM Cleveland, OH

1100 WBT Charlotte, NC

1140 WRVA Richmond, VA

1180 WHAM, Rochester, NY

1500 WTOP, DC

Im also getting a few of the 50 killowatt stations that I dont normally hear so well.

750 WSB in Atlanta made it through tonight

I also heard 760 WJR in Detroit clearly

670 WSCR in Chicago was weak but made it through...

1120 KMOX, MO... very messy and lots of QRM but it made it.

The ssb selectable AM sync on the Sony 7600gr makes ALL the differance for MW DX'ing.

--
Respectfully,

Michael

If you want an older portable that has good reviews. And don't want
to spent alot. Try a Sangean ATS-803A/RS DX-440. Usually can pick
one up even on ebay for less than $75. And they are not the battery
hogs some newer set are.

Mark,

it says in this comparison between the 150 and the 150E, though there was
less images on the 150E, increased noise appeared on those frequencies. The
150E is surely less sensitive too. What do you think now?

You have a point about the fire hazard. At 10 watts, there was little to no risk. I wouldn't turn the power up though.

> Europa. The input filtering is likely to be more useful than any loss in
> sensitivity.

He says:
"Incorporating these RF bandpass filters should theoretically reduce
spurious responses and noise. I compared the '150E to my early model '150.
When the original '150 was connected to my 90/60 meter parallel dipole,
there were several frequencies below 3 MHz which had images of local
broadcasters. With the '150E , there were no audible images present, but
there was increased noise on the same frequencies".

and

"I found that the original HF-150 was about 0.5 microvolts more sensitive
across the HF spectrum, however, the HF-150E was within specification of
less than two microvolts throughout the HF spectrum, and was typically in
the range of one microvolt. I think that the higher sensitivity of the
original may not be a virtue, given the radio's susceptibility for
overloading. I don't think that this difference is significant, and
switching in the pre-amp on the HF-150E improved the sensitivity to the
level of the '150 without pre-amp"

So basically he had to switch on the pre amp to bring it up to the 150's sensitivity. If you don't live in areas with strong stations, I'd rather have the sensitivity.

Plus, I didn't know the backlight option can't be turned off in the E. So, it will drain your batteries if you ever use it as a portable.

Single side band selectable AM synch. (AN ABSOLUTE MUST IF YOU WANT TO BEAT THE 7600gr)

Large comfortable to use tuning knob along with push button tuning knob.

Noise Blanker to deal with electronic noise.

Well though out selectable filter settings. Four widths for SW would be ideal.

Internal battery charger.

Illuminated buttons like on the DE-1102. A great idea that if refined could be a tremendous feature. If you could see the label or number of each button light up from inside of the radio so you could use it in the dark, it would be great. You were on the right track with the DE-1102. Just refine it.

Two selectable backlight colors. Amber or Blue. Not really needed but it would be such a neet feature, I'd buy one just for that.

A well designed and functional whip antenna that isn't too loose or too tight.

A carry case that does not stink like old tires mixed with formaldehyde. I had to leave the carry case I got with my DE-1101 outside for a week to fumigate it before I could breath around it without wanting to vomit.

A more elaborate external antenna then the standard wire that comes with the 1101 or 1102. Having it come with a capable external antenna would be a great selling point. Maybe have a wire with a coil or some kind of a load in it.

--
Respectfully,

Michael

My first radio was an analog Panasonic portable which my brother gave me due
to his lack of interest in shortwave- it must have been almost completely
deaf, although I didn't know any better either. I remember listening to the
BBC.
I bought my 7600 at a Sharper Image store while I was stationed in Hawaii
in 1988. I served me ok until about two years ago when I finally replaced it
with the 7600GR. That's when my interest in SWL really took hold. I didn't
really know much about SW or proper antennas when I bought that first Sony-
I used to listen for awhile and then put it aside for several months, or
even a year. I'd say that this would certainly not be too much radio for
you, but simply does everything better than the 7600 did. It is so much more
enjoyable to use that I listen everyday now. Last summer I upgraded again to
an Icom IC-R75; but the 7600GR is never far from me- especially since I do a
lot of hiking and camping. You can't go wrong with this one, even if it does
cost more than many portables.
Brian

Can you control the volume? Hell yeah! Mute also.You can also adjust the
PBT. It has features the radio doesn't have like PBT IF shift, both PBT in
the same direction with the press of one button.

PBT in opposite directions with one button.
NR, ANF, etc..everything.

Read:
Features
a.. Turn receiver on and off.
b.. Set a sleep time.
c.. Control receiver volume with VOL+/-.
d.. Mute receiver/return to previous volume.
e.. Enter frequency directly to 1Hz in the range of 30kHz to 60MHz.
f.. Increase or decrease frequency using CH +/- in steps of 1Hz, 10Hz,
100Hz, 1kHz, 5kHz, 9kHz, 10kHz, 100kHz, and 1MHz in the range of 30kHz to
60MHz.
g.. Set up to five (5) User Tuning Steps. Useful for detuning frequencies
by one half of filter bandwidth or use a very small frequency step to
quickly zero-beat in SSB mode.

h.. Recall last directly entered frequency.
i.. Directly select memory channels.
j.. Move up and down through memory channels using CH +/-.
k.. Start and Stop programmed and memory scans.
l.. Move memory frequency and mode to VFO.
m.. Write VFO frequency and mode to currently selected memory.
n.. Toggle between AM, S-AM, LSB, USB, FM (configurable), or CW
(configurable).
o.. Select VFO or Memory mode.
p.. Control of RF gain and SQL.
q.. Control of Inner and Outer PBT independently and together. Both PBT
controls can be moved together in the same direction as an IF bandpass
shift, or in opposite directions to adjust IF bandwidth. This only works
with certain IF filter combinations.
r.. Enable NR and directly set the level. Only works with DSP (UT-106)
option installed.
s.. Enable NR and move up and down through the levels. Only works with
DSP (UT-106) option installed.
t.. Move RF Gain, SQL, and PBT to full CW, CCW, and default settings
independently.
u.. Set up to six (6) User Definable settings each for RF Gain, Squelch,
Inner PBT, Outer PBT, and Both PBTs.
v.. Select Fast AGC, Slow AGC, or AGC off (configurable).
w.. Select Normal, Wide, or Narrow filter.
x.. Select Preamp 1, 2, or none.
y.. Select ANT 1 or 2.
z.. Toggle RF Attenuation on or off.
aa.. Toggle ANF on or off. Only works with DSP (UT-106) option installed.
ab.. Toggle NB on or off.
ac.. Toggle Memory Label display on and off in memory mode.
ad.. Announce with speech synthesis. Only works with Speech Synthesis
(UT-102) option installed.
ae.. Adjust LCD Backlight brightness.
af.. Settable parameters:
a.. CI-V address.
b.. Radio baud rate (1200, 4800, 9600, or 19200).
c.. Enable/Disable FM and CW modes in mode selections.
d.. Enable/Disable AGC off in mode selections.
e.. Frequency pacing. You can control the pacing of frequency up and
down. This is how fast the frequency changes when you hold the CH+/- keys.
f.. Define up to five User Tuning Steps.
ag.. Status LED that shows communications status, center position of
RF/SQL and PBT controls, settable parameter entry, and clear key operation.

Good advice. Also don't be afraid to by used modern radios. A used modern digital radio should perform as well as a new one. It's a great way to get 'more radio for the money'.

Ah, what you get during the daytime in
North America.
Try higher frequencies and check some
schedules for the correct time and freqs.

Try again at morning and evening, there is
more variety.

Also get your antenna up and away.

2816. SAQ to broadcast on 2 February?

Newsgroup: rec.radio.shortwave
Date: 2005-02-02 06:28:22 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <ctpru6$se6$1@xuxa.iecc.com>
Source record: 6818
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave

The Swedish-language Web page of SAQ (www.alexander.n.se) seems to say something about 1700 Swedish time (1600 UTC) on 2 February. Will the station be on the air then?

Arbetskv�llar
Arbetskv�llarna har helgledigt nu! N�sta arbetskv�ll blir onsdagen den 2 februari kl. 18.00.

http://www.alexander.n.se/

In 1895 the Italian physicist and later Nobel Prize winner Guglielmo Marconi (1874-1937) had realised wireless telegraphy, i.e. the possibility of transmitting information with the help of radio waves.

The communication across the Atlantic did not function well during World War I and the need of telegram traffic with America was great. The Swedish Parliament therefore decided in 1920 that a Swedish long wave transmitting station and a receiving station should be built under the direction of the "Telegrafverket".

Important for the location of the establishment was that the wave propagation path was run across open waters - south of Norway and north of Denmark and Scotland. In Grimeton, east of Varberg, the open landscape gave free way for the radio waves out towards the Western Sea and besides, the name was easy to pronounce for Americans.

The Great Radio Station was built during the years 1922-1924.

The transmitter, the heart of which is an alternating- current generator (alternator), was developed by the Swedish engineer Ernst Alexanderson, pioneer in radio, employed at General Electric in Schenectady and chief engineer at Radio Corporation of America (RCA).

In the autumn of 1923 the establishment was ready except for the six 127 meters high antenna towers, which were delayed one year because of strikes at the ironworks. The towers are placed at intervals of 380 meters with the 46 meters long cross-arms on top carrying the eight copper wires, which make up antenna capacitance and feed energy to the six vertical radiating elements.

A little village with dwelling houses for seven families was built for the employees.

On December 1, 1924, the great radio station Grimeton went into traffic with the call signal SAQ on 16.1 kHz (wavelength 18.6 kilometres) soon enough changed to 17.2 kHz (wavelength 17.4 kilometres).

On July 2, 1925, the establishment was formally inaugurated. King Gustaf V arrived by car from the Varberg railway station in company with among others the constructor Ernst Alexanderson.

During the station's now more than 75 years of history much has happened. 1938 short-wave tests were made. World War II accelerated the development and the number of short-wave transmitters increased rapidly and there are still some twenty transmitters at work. FM- and TV-transmitters were placed here and base stations for different mobile services were also established gradually.

"But make no mistake -- as I said earlier -- we have high confidence that
they have weapons of mass destruction. That is what this war was about and
it is about. And we have high confidence it
will be found."

Ari Fleischer, Press Secretary
Press Briefing
4/10/2003

http://www.whitehouse.gov/news/releases/2003/04/20030410-6.html
----
It doesn't get any more succinct than that.

Before March 2003 , do You think Bush could have gotten the backup from
the american Sheeple
to Invade a country, that did Nothing to the America ,if He said "We want
to give Iraq Freedom"
and Never mentioned the terrorizing phrases: "WMD WMD WMD x1000!,Imminent
threat! , smoking gun in the form of a mushroom cloud"?

yea , that's the ticket .200 Billion and Zero WMD's to show for it.
And remember this , Cheney was the First VP to ever go to the CIA offices,
Every other president or VP gets daily PDB's and never had the need to
visit.
Do Bushbots really care that the "fucking raghead heathens,nuke the middle
east" Iraqis can vote?

And remember who installed Saddam, and sold him Chemicals to gas Iranian
troops.(what American cared about those WMD's back then?)
And Who overthrew the the elected,secular government leader of Iran, an
replaced him with
the Shah of Iran?
Remember, it was Ronnie Reagan who funded Osama and Called him a "Freedom
Fighter"

And lest us not forget Clinton, that also armed our enemies the Red
Chinese by giving them
secret nuclear weapon designs.

From the Most Hated Nation on Earth,

Dunno...But for low band use, like most it would probably be one of old tube radios. IE: drake 2c, drake 4 line, etc...I still have all those, although I hardly use them anymore...They sit across the room, and collect dust...My old drake R4 is pretty quiet I suppose..It's serial 0058, and is *all* tube. It has a mellow sound, and being the sensitivity is "medium", it's not overly prone to low band noise syndrome, like some of the newer solid state rigs. The new radios are almost too sensitive...But one thing...The ability for a signal to come through noise is mainly bandpass oriented. The shape of the filters, and freq range can have a great effect. Even between say two japanese radios..On the low bands, my old kenwood TS-830 "sounds" better than either one of my icoms. It's not a difference in sensitivity,
it's the shape of the filters. The icoms have quite a bit of high end, and being they are super sensistive overall, they tend to bring out the

noise. That makes the desired signal, seem kind of flat sounding. But if you try the 830, the speech sounds a good bit richer, and the noise "seems" less a nuisance. It's still there of course, and even reads on the S meter, but the shape of the filters bring out the speech,
and null the noise better than the filters in the icoms. Actually, when I say the icoms have a lot of high end, according to my spectrum analyser, the filter in the icom is very flat across the bandpass. Quite even from say 200 hz to 2700 hz with no dips, peaks, etc on ssb...
Now my kenwood has a bit of a midrange peak, with maybe a tad less on the high end. Just this small change in filters makes a good bit of difference in the tone and readability. All the radios can turn the rf gain down to lower the noise, but it's still not the same...
Now, my drakes sound a lot different than any of my S/S radios. I'd guess a bit more mellow, and ear pleasing overall, but I think part of that is due to the tube audio ouput on the R4...I've never looked at it on the scope, but in general, it's bandpass is also easier to listen to than the icoms...My 2c has s/s audio out...
With my kenwood or icoms, the audio sounds pretty good, but it's obvious you are listening to a radio.
If you listen to the old R4, the audio almost sounds realistic, if you have the noise cut back with the rf gain. I'm talking, it's almost like the person is in the room, instead of listening to a radio...:) It's a totally different sound. Really mellow compared to an icom...I'm sure all the collins, etc old radios are about the same..Heck, one of the best radios I've ever listened to was a collins general coverage HF rig in a learjet. It had that smooth quiet sound

you hear on say an old tube rig...You had speakers and a mike for each pilot. The speakers were in the ceiling, and sounded *real* good. But I that was a $ 17,000 radio, if I remember right...Maybe more...
But also the antenna used makes a lot of difference...IE: MW...
My indoor loops cut a lot of QRN compared to the wires on MW...
Now, it may seem I'm badmouthing the icoms, but not really. The icoms sound real good overall, but yes, they are prone to making noise mask/color the desired signals...And the only reasons I can think as the reasons, are the overly hot front ends, that can hear a knat fart at 100 miles, and the shape of the bandpass filtering.
It's not an issue of sensitivity overall, as all my radios are pretty sensitive as far as HF is concerned. The 706 is the most sensitive out of the bunch though...
I'm listening to my icom 706mk2g right now on 3.792...EU has been booming in...And even sounds fine on the icom...lol... I gave them a call a while ago...Blasted right on through with my brute force 100w, and 40 ft dipole...One was in Ireland, one in England..Both were 5-9 here...
Heard some others too... Sweden, ect... The guy in Ireland is still hammering in here, as I type...

an auction for the 350 plus keypad just went for $610 on you know where.
shows how valueless that radio is due to lack of support !

Years ago I had a single conversion Radio Shack shortwave all bander. It was ok until I put a wire on the antenna terminal. Like magic, I got a lot of the local am radio stations repeating over the dial.

I'd say getting a double conversion set should be the very minimum requirement. If money and choice allow, get a triple conversion.

Some have said that the more conversion stages you go through, the more noise you get, but I haven't played around with enough different sets to be able to form a valid opinion on that.

A very, very quick check reveals that the NRD-545 is triple conversion.

The Founders were not ''all Christians''. Jefferson and Franklin were
both Deists, who believed in a vague and absent Creator.

Bruce, their retorts are generic & unimaginative! Most even revel in their ignorance! To paraphrase Bill of Stratford, they "signify nothing"! ... As for your B.B.C. drownout, do you have overhead power lines which also carry cable delivery? Digital cable harmonics might be your enemy. Back in Jan. of ' 01, when tuning into Ticket 1050 for the Raiders/Ravens A.F.C. Championship game(seems ages ago), got an intermittant piercing buzz on 1.050mhz(& harmonic multiples). Trying to switch sidebands on the Sony 2010 did't cure that interference. Complained to the local cable company to no avail. For whatever reason, it finally ceased in early '03! If that rfi was a portent of what powerline-delivered broadband will curse us with, God help swls all! Have noticed, though, that B.B.C. Africa Service on 6.005mhz from Ascencion Island gets a similar buzz-out to what you're refering to here in Sactown.

2845. R8B and external power supply

Newsgroup: rec.radio.shortwave
Date: 2005-02-02 15:43:43 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1107359023.874931.320710@l41g2000cwc.googlegroups.com>
Source record: 6846

A while back I decided to run my R8B off an external power supply. I can't say my decision to do this was based on any very sound reasoning. I'd read some old posts in rrr about how keeping heat out of the case would promote the long term health of the receiver and, being a little paranoid about protecting my investment, I decided to go with an external supply (despite the fact that the R8B really doesn't get very warm when running off its own internal supply). My guess is that that there's no real need to use an external supply and that my desire to protect my investment made me a sucker... In any case, I've tried a couple of external power supplies, most recently a 13.8 VDC / 3amp supply from Radio Shack, and both of them introduced at least some kind of noise or hash into my reception. It was often very subtle, but enough to be a real problem when it comes to weak signals. When the R8B is running off its own internal supply, it's much quieter. It seems to like it's own, internal supply.

So my question is, should just I forget about using an external supply? Thanks in advance!

Steve

I've never run my R8 or R8B off of an external supply (at least here at home). I do run the R7 off of one due to one earlier occasion of blowing some diodes in the internal supply, so just for the heck of it I run my current one off of a 12 volt supply.

The R8 and R8B never run very hot.

2851. Re: R8B and external power supply

Newsgroup: rec.radio.shortwave
Date: 2005-02-02 16:29:32 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <4200FFF7.72D1@mindspring.com>
Source record: 6902

I use an Astron SS-18, which is a switching supply (so it runs fairly cool),
and is not too noisy birdie-wise. I tried a MFJ switching supply first
(birdies all over) and an Astron non-switching supply (quiet but hot).

It keeps the R8B much cooler, and you can stack other stuff on it because
it no longer needs airflow.

I much prefer it on the external supply, but the real reason for getting
it was to run a couple dozen 12v accessories like active antennas and
ANC-4's and DSP's as well, without having a rats' nest of wall warts.

I have the SS-18 in a discarded refrigerator in the basement, far from
portables lying around that might hear its birdies, and the R8B is on
an external antenna so doesn't hear it in any case.

Be sure to inline-fuse the power from an external supply for the cable you're
using, amp-wise. Those things can burn up wire well before they reach
their rated capacity, and most wire won't handle 18 amps. Slo-blo fuses
run very hot, incidentally; use fast-blow fuses.

Heat is an enemy of all electronics, and even though the R8B does run cooler
than any other receiver I own, it could improve frequency stability to run
it even cooler from a DC pwr supply.

Btw I also use a RS 3a regulated pwr supply (to run an ATU) and except for
the spike of turning it on/off, have never noticed any hash on receivers
from it.

This reminds me...I read a story today (don't have a link, sorry),
where a lot of 50kW night AM stations in the US are complaining about
Spanish stations interfering with their signals. The signals are
apparently coming from Cuba, but the FCC hasn't determined this
officially yet. Anyone heard of or experienced this lately? I haven't
done much MW DXing lately, so I wouldn't know.

I thought you would get a kick out of the mason-jar trick! Live and learn.

What are your Alpha-Delta Antenna Switches "grounded" to when in the center position? Where are they mounted?

Some of you will remember I operate a USCG Auxiliary communications station, and when on duty, do not secure for wx. That required a complete lightning protection system which cost about $4500 in electrical design, labor and materials (surge suppression), plus another several hundred in materials (external ground system and bonding) which I installed. That does not include the standby power (generator) btw. I researched the grounding, bonding and surge suppression issues for over two years before embarking on that plan. Also studied the damages that occurred to stations (amateur, broadcast and government) who had lightning protection systems, and those that did not. I still follow every published story of lightning damage to US communication stations, and have a current library of (US) NEC and NFPA codes.

My system's baptism by fire came the same afternoon the contractors were cleaning up to leave in July 2004. Over 1,000 strikes in a 10 mile area, about 300 in my immediate area, and perhaps a dozen almost on top of me. Trees in my yard and on both sides of my HF antennas were struck, and the power spiked relentlessly, eventually calling for the generator due to electrical noise and high voltages. Dozens of electrical storms later, the system continues to perform as expected.

When I give advice to SWL hobbyists about lightning safety, it's because I went through years of worry and learning curves of what works, what doesn't, and the safest ways to operate (or isolate) from various stages of hobby listening, to nearly full-time service for the USCG.

Although the antenna systems have changed somewhat from the schematics on the website, the basic system is described at
http://members.cox.net/pc-usa/station/ground0.htm

This is the time btw, to commence any plans some of you may have had to install or upgrade lightning protection systems, not in the Spring or Summer when thunderstorms can occur without warning! O.K. Steve in Detroit you will have to wait until the ground thaws, lol.

Gee,thanks for your "nice comments". The Airplane I went to Vietnam in the first week of 1964 was a Pan American Airplane.We took off from San Francisco Airport at around 11:00 PM that night and we stopped at Anchorage Airport for breakfast and so the Airplane could refuel,I remember seeing a big stuffed Polar Bear in the lounge area at Anchorage Airport.From Anchorage we stopped at Hong Kong Airport for about half an hour and then on our way to Tan Son Nhut Airport a few miles North of Saigon.The next morning we were on our way to Can Tho to have our paperwork filed there.We spent the night at Can Tho and then to Shannon Wright Compound near Ving Long.I spent one year in Vietnam www.114thaviationcompany.com and on our way back to America,we came back to San Francisco Airport in a U.S.Air Force Airplane,(Pan American Aircraft had been banned by then because of Vietcong attacks) we spent the night at Yokota,U.S.Air Force Base in Japan.I spent four days and nights at Oakland Army Terminal,Oakland,California waiting on going to Vietnam.I was at Shannon Wright Compound for about three months and I got transfered to Tan Son Nhut,same Company. www.tsna.org
The same year,my brother (he was eight years older than I am) was a Helicopter Mechanic at Vung Tau,his second Tour Of Duty in Vietnam following a year in Germany.I did not get Drafted,I joined the U.S.Army on October 28,1962.I did my three years in the U.S.Army and I went back to civilian life.

I'd be interested in hearing more about the "increased noise" in the
Europa - the reviewer didn't say anything other than he noticed it. Who
knows if it's significant?

I bring plenty of power for recharging battery packs when I'm camping.
I'd gladly trade the convenience of a backlight for a little battery
drain.

Unless you've taken heroic measures or live in the woods, odds are the noise floor for your antenna will be higher than 2 microvolts.

My primary home antenna is 225 feet away from the house, with underground coax, and according to my Harris, the noise floor is right around the limit of the Europa.

If you were using the radio to chase DX in the woods, you could use an outboard preamp or an active antenna.

When I was looking for a HF-150e or a 7030+ my primary concern was finding a good radio for use when camping, and for when I'm hanging out by the pool or fishing for snook on the other side of Alligator Alley.

The HF-150e had the edge on size and would probably have cost less, the 7030+ had the edge on performance, and availability.

Both radios were designed by the same person.

Reminds me of a funny incident back in the 1950s, when US AM broadcast stations were still required to devote a certain amount of air time to public service. They met the requirement by broadcasting church services on Sunday mornings.

One Sunday morning I was introduced to a young Italian student who had just arrived in town the night before. The first thing he said was, "What is this with radio in your country? All I hear are priests!"

In our area -- VE exam tests are sent at 14 to 15 wpm with the spacing
adjusted to 5 wpm overall.
Check with your local VE

I don't think you will find much difference between 10 wpm and 15 wpm
Farnsworth

Or you can download a Morse program and computer practice

For Morse programs -- See URL:
http://ac6v.com/morseprograms.htm

And yes the AA9PW is superb

> done much MW DXing lately, so I wouldn't know.

There's been a fair amount of auroral propagation recently. This causes increased absorption at higher latitudes - "daytime" conditions, where AM stations don't cover the vast distances they cover at night, have extended into the nighttime hours, but more so for stations further from the equator.

This tends to make the signals of northern stations weaker, while not affecting southern (i.e., Latin American) stations as much. In a place where you might ordinarily hear WGN Chicago, you may hear Jamaica or Cuba instead.

The general consesus is that there haven't been any significant AM power increases in Cuba lately.

There have also been a few problems with interference from Spanish-language stations *based in the U.S.*. One Miami station got busted a couple of years back for operating from an unauthorized site, with an unauthorized non-directional antenna pattern, and at an unauthorized power. Amazingly, they didn't lose their license. Another station here in Tennessee has been busted twice for using 5,000 watts at night instead of their legal six-watt signal. They're not the only two.

My R8 ran "warm" on the built in power supply, and this made the top of the radio a favorite snoozing spot for our cats. Having a cat snoozing on top makes it run warmer.

Without the snoozing cats problem, I'd consider an external power supply to be a belt and suspenders kind of thing. You don't need to do it, but it may prolong the life of components.

Besides heat, the other problem with cats snoozing on your radios is eventually, they decide the tuning knob must be a toy since you seem to enjoy turning it.

I've pretty much decided to sell my Applied Communications (Norlin) SR-2150 wideband because one of the cats is afraid of the cooling fan, and another thinks turning the tuning knob is a game.

I wouldn't be so sure, Laughing Boy. Somehow I doubt you have the st�ones to read it all, but if you're going to respond t�o this at all, you'd better at least read until you get to this:

Today, some Republicans claim President Clinton "did noth�ing" to combat terrorism. Back then - when they might have preven�ted the 9/11 attacks - Republicans blocked or stalled all of the �anti-terrorism proposals above.

Pick a paragraph and choke on it:

==========

Republicans Sabotaged Clinton's Anti-Terror Efforts
By Mike Hersh

President Clinton took the oath of office January 20, 1993. �February, 26 - barely a month later - terrorists detonated more than 1,00�0 pounds of explosives under the World Trade Center, killing six and inj�uring about a thousand people. Bill Clinton and the Democrats never dreame�d of trying to blame the outgoing George Herbert Walker Bush Administration.

They just began working to keep us safe from terrorism.

As reported by the "debunking" website, snopes2.com: Within �a year, law enforcement officials hunted down four of the "blind cleric"� Sheik Omar Abdel Rahman's disciples, then prosecuted and convicted them for t�he bombing and sentenced them to 240 years in prison in March 1994.

Officials captured the prime suspect Ramzi Ahmed Yousef in 1�995. A court convicted him in November 1997 and sentenced him to 240 year�s in prison as well. An additional suspect fled.

"In August 1998, President Clinton ordered missile strikes a�gainst targets in Afghanistan in an effort to hit Osama bin Laden, who had bee�n linked to the

embassy bombings in Africa (and was later connected to the a�ttack on the USS Cole). The missiles reportedly missed bin Laden by a few hou�rs, and Clinton was widely criticized by many who claimed he had ordered the str�ikes primarily to draw attention away from the Monica Lewinsky scandal. As Joh�n F. Harris wrote in The Washington Post:

In August 1998, when [Clinton] ordered missile strikes in an effort to kill Osama bin Laden, there was widespread speculation - from suc�h people as Sen. Arlen Specter (R-Pa.) - that he was acting precipitously to draw attention away from the Monica S. Lewinsky scandal, then at full boil. Some said he was mistaken for personalizing the terrorism struggle so much ar�ound bin Laden. And when he ordered the closing of Pennsylvania Avenue in front of the White House after domestic terrorism in Oklahoma City, some Republicans accused him of hysteria.

See: "Claim: The Clinton administration failed to track down the perpetrators of several terrorist attacks against Americans. Status: False." http://www.snopes2.com/rumors/clinton.htm. Also see: Lauria, Joe. "U.S. Embassy Bombers Get Life Sentences." The Ottawa Citizen. 19 October 2001 (p. A5). As well as Randolph, Eleanor. "4 Guilty in Bombing of W�orld Trade Center," The Washington Post: 5 March 1994 (p. A1) and "Trade Center Bombers Given 240 Years Each," The Washington Post: 25 May1994 (p. A1).

Republicans typically couldn't decide whether President Clin�ton was too blas or too "hysterical." In reality, his response was appropriately focused on bin Laden and al Qaeda according to top anti-terror officials of the Reagan and Bush I administrations. What did Bill Clinton do?

Issued January 23, 1995 his Executive Order 12947 "Prohibiti�ng Transactions With Terrorists Who Threaten To Disrupt the Middle East Peace Pro�cess," provided
for prevention and punishment of efforts to fund terrorism and a�uthorized the FBI and Treasury Department to investigate and prevent financial support of terrorism. It read in part:

"By the authority vested in me as President by the Constitut�ion and the laws of the United States of America ... I, William J. Clinton, Pres�ident of the United States of America, find that grave acts of violence committe�d by foreign terrorists that disrupt the Middle East peace process consti�tute an unusual and extraordinary threat to the national security, foreign polic�y, and economy of the United States, and hereby declare a national emergency t�o deal with that threat."

This executive order provided for prohibition and punishment of transactions to support terrorism including transfer of "property and intere�sts in property of ... the persons [found] to have committed, or to pose a sign�ificant risk of committing, acts of violence that have the purpose or effect of disrupting the Middle East peace process, or ... to assist in, sponsor, or provide financial, material, or technological support for, or services in suppo�rt of, such acts of violence...."

This order held that "any transaction or dealing by United S�tates persons or within the United States in property or interests in propert�y of the persons designated in or pursuant to this order is prohibited, inclu�ding the making or receiving of any contribution of funds, goods, or services t�o or for the benefit
of such persons [and] any transaction by any United States p�erson or within the United States that evades or avoids, or has the purpose of e�vading or avoiding, or attempts to violate, any of the prohibitions set forth in this order, is prohibited."

Clinton ordered the prohibition of donations "by United Stat�es persons to persons [which] would seriously impair [his] ability to deal with the nationalemergency declared in this order, [and determined th�at any] investigation emanating from a possible violation of this or�der ...
shall first be coordinated with the Federal Bureau of Invest�igation (FBI), and any matter involving evidence of a criminal violation shall be referred to the FBI for further investigation...."

See: Executive Order 12947 of January 23, 1995, Federal Regi�ster, Vol.60, No. 16,

http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=1995_regist...,
President Clinton expanded that Order, explaining to the Spe�aker of the House: "On January 23, 1995, in light of the threat posed by grave acts of violence committed by foreign terrorists that disrupt the Mi�ddle East peace process, using my authority under, inter alia, the Internati�onal Emergency Economic Powers Act ... I declared a national emergency and issued Executive Order 12947. Because such terrorist activities continue to p�ose an unusual and extraordinary threat to the national security, foreign polic�y, and economy of the United States, I have renewed the national emergency dec�lared in Executive Order 12947 annually, most recently on January 21, 1998."

He added, "I hereby report to the Congress that I have exerc�ised my statutory authority to issue an Executive Order that amends Executive Order 12947 in order
more effectively to respond to the worldwide threat posed by foreign terrorists [to add] Usama bin Muhammad bin Awad bin Ladin (a.k.a. Usama bin Ladin), Islamic
Army, Abu Hafs al-Masri, and Rifa'i Ahmad Taha Musa to the l�ist of terrorists that are subject to the prohibitions contained in the Execut�ive Order." See: "Clinton's Letter to Congress on Freezing of bin Ladin Asset�s," August 22, 1998

http://www.ict.org.il/documents/documentdet.cfm?docid=22

President Clinton also ordered a "terrorism threat assessmen�t of every federal facility in the country," which had "already begun" when, in February 1995, the Clinton Administration introduced a counter-terrorism bill i�n the Senate (S. 390) and the House of Representatives (H.R. 896).

Note: this was before the Alfred P. Murrah Federal Building Oklahoma City bombing on April 19 that year.

President Clinton's proposals would have expanded pre-trial detention and allowed more federal wiretaps of terrorism suspects, eased deportation of foreigners convicted of crimes, allowed the detention of aliens convicted or suspected of crimes, let the President criminalize fund-raising for terrorism, and revived visa denial provisions to keep dangerous people out of the US.

Unfortunately, Republicans sabotaged Clinton's efforts to keep us safe.

If in force before April 19, 1995 federal officials might have detected and prevented the Murrah Building plot. 9/11/01. If the Republicans had passed Clinton's proposals before September 11, 2001 we might have blocked the al Qaeda terrorist plot that killed 3000 Americans. We all know what happened eight months into the illegitimate Bush/Cheney reign of error.

Republican Congressional leaders shot down Clinton's proposals, tried to impeach him on trumped up grounds, and dragged their feet when it came to national security. They did this even after the Murrah Building bombing. Clinton's "Omnibus Counter Terrorism Act of 1995" would have:

"[P]rovided clear Federal criminal jurisdiction for any international terrorist attack that might occur in the United States [including] Federal criminal jurisdiction over terrorists who use the United States as the place from which to plan terrorist attacks overseas." Allowed deportation of "alien terrorists without risking the disclosure of national security information or techniques."

It would have "prevent[ed] fundraising in the United States that supports international terrorist activities overseas," implemented "an international treaty requiring the insertion of a chemical agent into plastic explosives when manufactured to make them detectable," and granted "more tools to federal law enforcement agencies fighting terrorism."

These proposed "tools" would have included: Providing for "disclosures by consumer reporting agencies to the FBI for counterintelligence and counterterrorism purposes." Also "relaxed standard[s] for obtaining 'pen registers' and 'trap and trace' device orders which already exists in routine criminal cases, to national security cases."

Note: a "'pen register' is a device which records the number dialed on a telephone" and a "'trap and trace' device is similar to 'Caller ID,' providing law enforcement with the telephone number from which a call originates. [This] would not permit law enforcement to monitor actual conversations being conducted."

Clinton's proposals "would require hotel/motel and common carriers such as airlines and bus companies to provide records to the FBI pursuant to authorized national security requests just as they must do now for virtually all state and local law enforcement. [This because] FBI has found that, while some of these entities voluntarily provide such information, an increasing number refuse, absent a court order, a subpoena, or other legal protection.

Clinton also sought to "fund costs associated cases which arise in connection with terrorism crises, including logistics and other support"
and he wanted to "Create an interagency Domestic Counterterrorism Center headed

by the FBI" to "establish a partnership effort between the J�ustice Department, including the FBI, and other federal and state law enforceme�nt authorities to coordinate [ant-terror] efforts within the United States."

President Clinton "directed the Attorney General to conduct �this assessment and report her recommendations in 60 days. The assessment has al�ready begun" and directed "the FBI Director, the Attorney General, and the Na�tional Security Adviser to prepare a presidential decision directive authori�zing any and all further steps necessary to combat foreign and domestic terro�rism.

The Clinton Administration also submitted "New Legislative P�roposals" which called for investigations and hiring "approximately 10�00 new agents, prosecutors, and other federal law enforcement and support p�ersonnel to investigate, deter, and prosecute terrorist activity," and w�ould have made it more difficult for terrorists to commit - and easier for law� enforcement officers to detect, prevent and investigate - terrorist acts�.

It would have required "the inclusion of microscopic particl�es in certain raw materials, thereby permitting law enforcement to trace the s�ource of the explosive even after a device has been detonated" and "permi�tted military participation in crime-fighting involving weapons of mass de�struction ... to permit military participation in criminal cases involving ch�emical, biological, and other weapons of mass destruction; areas in which the mi�litary has specialized expertise."

Today, some Republicans claim President Clinton "did nothing�" to combat terrorism. Back then - when they might have prevented the 9/�11 attacks - Republicans blocked or stalled all of the anti-terrorism pro�posals above. First, they stone-walled for months despite Clinton Administration �warnings. Then, the GOP watered-down key provisions.

Finally the Republican Congress passed S.735 "A bill to prev�ent and punish acts of terrorism, and for other purposes." It became Public Law No: 104-132 when President Clinton signed it, despite his an�d others' concerns that the Republicans watered down the bill too much�.

As CNN reported: "Congress on Thursday passed a compromise b�ill ... a watered-down version of the White House's proposal. The Clin�ton administration has been critical of the bill, calling it too weak. The orig�inal House bill, passed last month, had deleted many of the Senate's anti-ter�rorism provisions...." See: "Congress passes anti-terrorism bill," �CNN April 18, 1996:

http://www.cnn.com/US/9604/18/anti.terror.bill/index.html

Republicans weakened and blocked anti-terror legislation sev�eral times, sabotaging Clinton Administration efforts to keep us safe. P�resident Clinton and his administration never stopped working to combat terrorism� and kept pushing the Republicans for adequate anti-terror laws.

Other Clinton Administration anti-terrorism legislative prop�osals include: The Comprehensive Antiterrorism Act of 1995, The Co�unter Terrorism Technology Research Act of 1995, The Antiterrorism Amendment�s Act of 1995, The

Effective Death Penalty and Antiterrorism Act of 1995, and t�he Senate and House versions of The Omnibus Counter Terrorism Act of 1995.

According to CNN, Republicans refused to cooperate with Pres�ident Clinton's efforts to protect us from terrorist attacks: "July 30, 1996 President Clinton urged Congress Tuesday to act swiftly in developing anti-ter�rorism legislation before its August recess. But while the president pushed for quick legislation, Republican lawmakers hardened their stance against some of t�he proposed anti-terrorism measures.

"Senate Majority Leader Trent Lott, R-Mississippi, doubted t�hat the Senate would rush to action before they recess this weekend. The Senate n�eeds to study all the options, he said, and trying to get it done in the next three days would
be tough. One key GOP senator was more critical, calling a prop�osed study of chemical markers in explosives 'a phony issue.'" See: "Presi�dent wants Senate to hurry with new anti-terrorism laws," CNN July 30, 1996:

http://www.cnn.com/US/9607/30/clinton.terrorism/

Despite President Clinton's extensive efforts to combat terr�orism - and their own refusal to help, even eagerness to hinder those efforts - Republicans shamelessly blame Bill Clinton. The Washington Post

reported: "The Sept. 11 terrorist attacks had been over for a few hours when Rep. Dana Rohrabacher (R-Calif.) announced his conclusion ab�out the root of the problem. 'We had Bill Clinton backing off, letting the Talib�an go, over and over again,' the conservative from Orange County declared at a ne�ws conference."

"On the editorial page of the Wall Street Journal [October 5, 2001] Rush Limbaugh penned a column on how 'Mr. Clinton can be held cul�pable for not doing enough when he was commander in chief to combat the terroris�ts who wound up attacking the World Trade Center and Pentagon.'" See:

Harris, John F. "Conservatives Sound Refrain: It's Clinton's Fault." The Washington Post: 7 October 2001 (p. A15).

http://www.washingtonpost.com/ac2/wp-dyn?pagename=article&node=&conte...
does all this prove? That besides lacking any sense of honor, honesty or decency, top Republicans don't know the first thing about na�tional security. They didn't care enough about the Atlanta Olympics bombing, the first WTC bombing, or even the Murrah Building bombing to do anything to prevent the next terrorist attack. Republicans remained soft on terror when t�hey might have made it harder for terrorists to kill Americans. Again, we all kn�ow what happened eight months into the illegitimate Bush/Cheney reign of erro�r.

Even though President Clinton knew about the al Qaeda threat and took action to kill bin Laden, and to punish and thwart terrorists and thei�r plots. The Clinton Administration warned the Republicans about terrorism more t�han six and a half years before 9/11/01 and then again as the illegitimate Bush Occupation stole into office. Still, the GOP did nothing or actually blocked most efforts

to keep us alive!

Here's more from President Clinton's Letter to Congress on F&#65533;reezing of bin Ladin Assets: "Usama bin Ladin and his organizations and associate&#65533;s have repeatedly called upon their supporters to perform acts of violence. Bi&#65533;n Ladin has declared that killing Americans and their allies 'is an individual du&#65533;ty for every Muslim... in order to liberate the Al-Aqsa Mosque and the Holy Mos&#65533;que.' These threats are clearly intended to violently disrupt the Middle East pe&#65533;ace process."

He stressed, "I have authorized these actions in view of the&#65533; danger posed to the national security, foreign policy, and economy of the United&#65533; States by the activities of Usama bin Muhammad bin Awad bin Ladin (a.k.a. &#65533;Usama bin Ladin), Islamic Army, Abu Hafs al-Masri, and Rifa'i Ahmad Taha Musa &#65533;that disrupt the Middle East peace process. I am enclosing a copy of the Exec&#65533;utive Order that I have issued exercising my emergency authorities."

The Republicans ignored these warnings "from President Clint&#65533;on to the leaders of Congress explaining why he ordered the freezing of all asset&#65533;s controlled by or affiliated with terrorist chieftain Usama bin Ladin."

See: Clinton's Letter, August 22, 1998:

http://www.ict.org.il/documents/documentdet.cfm?docid=22

Under Bush and Cheney, their anti-terror task force never me&#65533;t until it was too late. Their top defense officials, Rumsfeld and Rice, tried &#65533;to slash anti-terror funding and claimed terrorism wasn't their responsibility re&#65533;spectively. It took the horrible attacks on the World Trade Center and the Penta&#65533;gon before the Republicans woke up and recognized the serious terrorist thr&#65533;eat.

The next time a Republican tries to blame President Clinton &#65533;for their refusal to cooperate with his efforts to keep us safe, don't get angry.

When Bush, Cheney, Rumsfeld, Rice or any right winger claims&#65533; only Republicans can protect us from terrorism - despite their failure to do &#65533;anything in response to the specific warnings about the looming al Qaeda threat -&#65533; don't just decry their hypocrisy and lies. Make a big donation to anti-right &#65533;wing efforts like this website, or the Democratic National Committee.

Also, vote against any and every Republican running for any &#65533;office. Your life and your family's lives depend on it. Never forget, Republic&#65533;ans are soft on terror and soft in reason. All they can do is blame others f&#65533;or their mistakes. They can't keep us safe.

If you like the GR, I wish you could try a 2010 for MW. I have both
and the GR is good, but the 2010 just smokes.

Yes who knows how significant the noise was but if he noticed it, it must of stood out enough. Still, you can't really be sure it can be reproduced on all the E models unless you had at least 3 to test it on at the very same time.

But as they said it was produced mainly for the Euro market where conditions are different then where we live. With that gothic gold "Europa" label across the radio it kinda reminds of me of a mini Dracula's coffin :)

Mark you don't mean Alligator Alley in Florida do you? Nah they got alligators in alley's in most states nowadays...

There are double conv sets that do as well as the triple. Its a matter of design but yes at least a double conversion type circuit is the norm or starting point of serious modern superhet design. The Icom R-71s are quadruple conversion and were/are a favorite for utility dxers like myself. Sometimes three or four IFs are problematic with intermod I've heard but I've never had any bad experiences.

The VECs have pretty much settled on the following standard for code
testing:

Character speed: 15wpm
Word speed: 5wpm
Tone: 750 Hz

So the 15wpm minimum Farnsworth that you are finding is what you need.

> and the GR is good, but the 2010 just smokes.

Is the 2010 that good for MW just on its internal antenna ??? For me, I dont like the 7600gr for its sensitivity on MW, I value it because it is fairly quiet as far as noise goes and MOST of all the ssb selectable AM sync really makes a huge difference. Without it, in a lot of cases, you get all kinds of QRM from neighboring stations when you try to DX MW. Then, just switch on the sync and pick the ssb setting on the other side of the QRM. Viola !!! A good clean clear signal. I absolutely LOVE it. I have GE SR III with that huge internal ferrite bar that was designed for MW DX. It is more sensitive then the 7600gr and more quite. Still, I prefer the 7600gr just because of the sync and digital tuning.

Michael

From what I've seen of Universal's used prices I kind of doubt that Martyn
could make any money and might even lose money selling.

Double conversion, triple conversion, quadruple conversion, sets that sell for $50.00, sets that sell for 10,000.00! Antennas 3 inches long, 100 feet long, 3 inches high, or 3 miles high! For a beginner, none of it really matters. What DOES matter? EXPERIENCE. That is all.

There is no substitute for time and experience and there is no "short-cut," either. And that applies to ANYTHING worth doing!

If a beginner is truly interested in the hobby, he or she should just do a little research, perhaps on this group, or, better, in PASSPORT and WRTH, and make a reasonable choice in radios and antennas. It isn't too hard. Most of them out there are pretty good. I, as does everyone else here, have my opinions, but, in the end, for a beginner, it just doesn't matter, within reason.

Then, as he/she becomes EXPERIENCED with the radio they have, REGARDLESS of what it is, and with short wave listening in general, why any future equipment "upgrades" will take care of themselves.
Just my thoughts.

Best,

Joe

He cited *plenty* of creditable sources, none of which you seem capable of
refuting.

Let's see how many answers *you* have -- what, specifically, do you think
Clinton should have done that he didn't?

HINT: "Stop 9/11" is *not* specific.

Which particular one of Collins receivers? What was the actual
specified noise floor in figures? Frankly, I doubt you can get much
lower than the WinRadio G313i -138 dBm.

Read also this:

"If I had to choose between a Collins 95S-1 and the WR-G303i (ignoring
the obvious fact that the 95S-1 tunes to 2 GHz), I would take the
WR-G303i."

John Wilson, ShortWave Magazine
(more details on http://www.winradio.com/pdf/g303i-review-swm.pdf)

And this in fact refers to the *predecessor" of the WR-G313i, which is a much better radio still - 5 stars by WRTH.

My WR-G313i does indeed have the advertized -138dBm noise floor, and even the S-meter reliably measures down to that level - with 1dB accuracy.

Not speaking of the ultra-sharp continuously variable IF filters down to 1Hz bandwith.

Now *that's* what I'd call winning the contest hands down. ;-)

Geoff

Thank you, picked one up and had it shipped to Canada. Total cost was about $25 Canadian, but it's not available locally.

The unit I got had a slightly different antenna, it cannot pivot, just pull straight up and down. I replaced it with about a 2.25 foot antenna, and I can almost cover my whole house (as opposed ot just one room). Going to crank it up to 3 volts now.

By the way:
http://groups.google.ca/groups?q=sound+feeder&hl=en&lr=&group=rec.radio.shortwave&selm=994645492.921906%40sj-nntpcache-5&rnum=5

Apparently the FM transmitter chip it uses can only take about 4 volts before it fries.

My 515 is the one receiver I've had that I will never sell. The rest could go without too much discomfort on my part. Yeah, the audio isn't great, but for utilities, who cares? Besides, with the right speaker (definitely not the one that matches it!) or the JRC headphones, it's not bad at all.

The last Drake radio I have ever wanted is the R7a, not much of an R8/A/B fan at all.

Yeah, but my feelings are that buying an elcheapo portable, or even a
fairly decent one, is a mistake. They don't work very well, don't hold
up all that great for the most part, and lose their value pretty
rapidly.

There are tons of arrox. $300 used R71A's, Kenwood R5000's and others
that are good enough to keep for a while, and can be sold for basically
what you pay for them anytime. I have a R71A that I bought for a really
cheap price. It had a problem in the PS section that seemed to confound
several techs at a couple of places that tried to fix it. It was a very
easy fix (an hour total time) and I will get 2-3 times what I paid when
I sell it one of these days..if I do sell it..

A friend wanted to try SW a while back, and he bought a very nice NRD-
525 off Ebay for about 400 bucks. After a year or so, he wanted out, and
made 20 bucks profit when he put it on Ebay. Get paid to listen, not a
bad deal..

Geoff:
We are talking about the legendary R-390 receiver that Collins designed fo
the US military. These were manufactured by Collins and other companies and
cost many thousands each. Their ability to hear weak signals remains
unmatched to this day. It's a vacuum tube based receiver and extremely
quiet.

According an article, one possible use of HAARP is to create advertising in the sky!
Or light up cities at night.
Or ....?

See:
http://www.livescience.com/technology/050202_light_show.html

Is Clear Channel behind this too? They're in broadcasting and billboards. :-)

2929. really horrible conditions

I haven't heard Cuba since mid January, and I've heard the BBC only intermittently in the last month. Tuesday morning (world day) was the first time in three weeks that I've heard the BBC on 9525 at 0300 UTC! I haven't even bothered to check Australia's 15 Mhz freqs. The only freq I can hear the BBC on at 0300 (when they broadcast The World Today) is 5975, and even that is practically unlistenable most of the time! Are sunspot lows always like this? Has there been some big long lasting solar disturbance over the past month? My Degen has become practically useless for casual listening, and my Yaesu isn't doing too well either. What's going on? Is this the end of the world? (Hell, it's as good an explanation as any other.)

Got that collision from Naval procurement office guys (they said steel but I
mistyped). They talked at length about the easy access to titanium for the
soviets since they sit on huge ore reserves, and they mentioned several
collisions where the russians came out in better shape due the hull
strength.

Geoff:

-143 dB was the noise floor of the R-390A, according to web info.
Otherwise, of course, it was an old tube (32 of them!) boatanchor with
mechanical tuning, weighed a ton, and had none of the amenities that modern
digital radios provide. But it WAS quiet!

The year was 1973 - the receiver: DX150B
Eventually I added a homebrew preselector... some IF Transfilters...
a frame-loop antenna..
The absolute pinnacle: Picking up Germany and USSR on 872 Khz on
subsequent evenings in the fall of 1976..
from the West Coast of Canada..
As I look over my shoulder, I see the DX150B, its dial lights still
glowing, its sound as sweet....

I use a garden variety (Radio Shack) 12V power supply. It does make a
significant improvement in lowering the case temperature but it's hard
to say if this will extend the componant life over the long run. I tend
to think it will, so that's why I do it. There is one down side to the
external DC supply though. When the internal supply is used, the clock
is sync'd to the AC 60-HZ frequency which makes it more accurate than
with the DC supply.

There's also the possibility of cat hair getting inside and interfering
with the air circulation.

2937. Re: What's the most enjoyable receiver you've ever owned?

Newsgroup: rec.radio.shortwave
Date: 2005-02-03 06:28:49 UTC
From: nm5k@wt.net
Message-ID: <1107412129.708707.235430@g14g2000cwa.googlegroups.com>
Source record: 6738

Depends what it's used for I guess...I always liked transoceanics
for casual MW use...I still have a 58 model under the table, but
don't use it as the caps were starting to flake out a bit. Back in
the early 70's when I really started listening alot, I used only a
small philco portable, http://web.wt.net/~nm5k/r6.jpg ,but heard a
half zillion stations. Got my moneys worth, thats for sure...
Back in those days, "I was in jr.hi", something like a drake 2c,
which a friend of mine had, was like a cadillac... I didn't own a 2c
until the early 80's...Anyway, as far as my shortwave BC, that philco
probably heard the most stations. After that, and even now, I'm not
really that interested in SW BC...More ham, and utility, etc...I'll
listen to a SW-BC station once in a blue moon these days.
My most fun radio these days? The IC-706mk2g hands down. It does nearly
everything in a box the size of car stereo...Of course, it's a
transceiver, so it talks, but it's also wide coverage rcve...Longwave
to 200 mhz straight line, and then from 400-470 mhz. All modes on all
bands...It's quite good on MW-SW, but is also a killer scanner for
VHF/UHF.
Better receiver than most "scanners", and has 4 scan modes. I could
sell every piece of gear in this shack, and leave just that 706, and
still do everything I normally do...Home, mobile, portable. For it's
real dinky size, it's a killer radio...It's no contest rig, but it's
way more versatile than most contest rigs being it covers VHF/UHF also.
These days, the chance of me buying a stand alone receiver are pretty
low. I'd almost always buy a transceiver, so I can really get my moneys
worth...I spent $900 on the 706 in 2001...It's less than that now.
Maybe
$750 plus or minus...So far, not a lick of trouble, and it's on 24/7.
Knock on wood...:/ MK

Source record: 6739

Many thanks for all the advice. I was looking at this all wrong after reading your posts. The static charge will take the easiest path to GROUND, so there's now reason why it would bleed through the reciever.

I've done a fair amount of research on this lately. The Gizmoe box looks interesting, and most of the circuits are fairly similar. I agree that the neon light probably isn't very effective unless the bleed resister fails. By the time it fires, though, it's probably too late.

What I would like to do is build the circuit in an aluminum project enclosure. The circuit will be similar to most of the ones you folks talked about. One circuit I found interesting is in an excellent article: ttp://www.qsl.net/wd8das/2010.html The problem is that I cannot read the component values because the image is all blurry. Can anyone tell me what they are? I would like to add the .05 uF cap inline with the center wiper of the pot. The only thing I'm not sure about is how all this will affect my mfg reciever antenna tuner. Will the resistance and capacitance cause problems with the tuner?

Rather than use any type of switch, I'll simply unplug the antenna and place it outside the window it runs through when I'm not using it. A value of 10k for the bleed resistor sounds pretty low. I've heard people talk of values as high as 100k or even 1meg!

Thanks again to everyone. I feel like my protector box is honing in nicely and should have it put together in another day or two. If someone can tell me what the component values are in the WD8DAS schematic, I would really appreciate it.

I'd like (besides the other specifications) some other things (really cool for european dxers):

FM 64-76 extension (for OIRT dx)
RDS (really nice to have FM listening) with PI CODE reception
3 IF FM filters frontend (like Satellit 500 or 700 ... cool for FM dxers -)
and two kind of FM selectivity (like 280 and 80 khz Murata filters)

it could be really cool mp3 recording and two antenna connector one for FM Antenna and SW and another one for MW antenna to disable internal ferrite. internal ferrite could be switch off besides like in Sangean ATS 909 with a stereo minijack)

other suggestions made from other dxers are cool too.

Your not wrong.

Short-wave radio is the "Dollar Store" of broadcast
media. As such, only the greatest of kooks and paranoids, who would
never be carried by mainstream media and could never afford airtime
on the same are on short-wave. To be fair however this is more of a
USA phenomena. Foreign short-wave is still for the most part a good
source of news. Domestic USA short-wave however is nothing but a
vast wasteland of every conceivable religious nut, racists and misfit goof
ball which can be imagined. (they are also very amusing as most of em
believe their own BS) Think of it as the point where roller derby and
the tamborine-bangin fundie church on the corner on the other-side-of-the
tracks across town gather behind a microphone. ;)

Those are pretty nice as workbenches.

What about radio consoles? With the ability to rack mount radios and video displays? Something like what you may see at a commercial HF utility station or like NASA's Houston Control. An ergonomically angled rack mount vertical panel surface and a flat desk workspace in front of the panel?

Look at any integrated circuits for a date code. ICs, at least in the
DIP package, usually have a YYWW (year, week) number as part of their
label.

Boy does this thread bring back memories. I was in high school in Bangor, Maine, ca. 1960, when I got a shirt-pocket Silvertone 6 transistor radio from Sears for Christmas. My favorite stations for rock music were WKBW, Buffalo, WPTR, Albany I think, WABC, New York, and, of course, WMEX (?), Boston, with "Arnie Ginsberg and the Night Train Show". It was a couple years later that we moved to Florida and I traveled to New Orleans to march in the Mardi Gras parade with my high school band. I was half asleep one night when I was startled by a weird howling noise coming over my radio through the little earplug. Some strange dude named Wolfman Jack!

Shia candidates lead Iraqi poll

Officials say about 60% of Iraqis voted in Sunday's election
Latest partial results show Iraq's main Shia Muslim coalition has maintained a strong lead in the country's landmark elections, officials say.
The results are based on 35% of the ballots cast last weekend.

The United Alliance list, backed by Shia cleric Grand Ayatollah Ali Sistani, has polled 2.2 million votes out of the 3.3 million counted so far.

The Shia coalition is also ahead in votes cast by Iraqis overseas, according to preliminary results.

The International Organization for Migration (IOM), which supervised the absentee ballot, said the United Alliance list had received 36.15% of 263,685 ballots cast overseas.

The Kurdish Alliance list came second, with 78,062 votes, or 29.6% of the expatriate vote and the list of candidates led by interim Prime Minister Iyad Allawi came third, with 9.15%.

Complaints investigated

The partial results come from 10 of Iraq's 18 provinces - all 10 have large Shia populations.

The first results, released on Thursday after 1.6 million votes were counted, placed the United Alliance list in the lead with one million votes.

Full results are not expected for several days, the Iraqi election commission says.

Threats of violence did not deter large numbers of electors voting on 30 January, but there were complaints about polling stations running short ballot papers in several provinces.

After the first partial results were released on Thursday, officials said they had sent a team to the northern city of Mosul to look into allegations of irregularities in Sunday's election.

"We received some complaints and the legal department in our commission is studying these complaints thoroughly," said election commission official Safwat Rashid.

Sunni Arabs in particularly complained about being denied the right to vote around Mosul.

On Wednesday, the main Sunni religious organisation, the Associations of Muslim Scholars, said the election had been illegitimate as so many Sunni Muslims had not taken part in the vote.

Looks like a good price, the 110-450 looks just like the ones Radio Shack
wants about 7 or 8 bucks a pair for and the same ones I purchased from Radio
Shack
5 or 6 years ago at three for about $5.00. Yes they do work, I have them on
both ends of all the cables in and out of my RX320 and computer. On small
audio cables I looped through them twice. RM~

PS, Digikey has good prices on them also but a tad higher than 95 cents ea.

Dear Kelly,

May I make a suggestion that willl at first appear "simple-minded" or "flip" but it is not meant to be; it comes from long experience with this sort of thing:

"If it ain't broke, don't fix it!"

You've been happy with your radio. Why take a chance on doing something which, though it might offer some nebulous "improvement," also has the potential to cause possible damage to it?

Best,

Joe

Source record: 6959

Re-reading my first post I noticed two silly errors I made: the slew buttons on FM should offer 100 kHz tuning (not MHz)- and possibly 50 kHz tuning also - and the internal ferrite antenna for MW and LW should be 260 mm minimum length (not 130). An auxiliary external removeable MW/LW antenna, which could plug into a receptical on the top of the radio, and be rotated would be extremely nice; only the antenna would have to be rotated for best MW/LW reception, not the whole radio.

By the way, really "tight" (multiple) filters for FM reception would be a plus.

One other suggestion: make the radio BIG - more on the order of the Grundig Satellit 800. Smaller radios involve too much compromise in my opinion. There are certainly enough smaller compromised radios on the market already but very few "great" ones. (The Satellit 800 is close, but the improvements suggested here on this post would result, I believe, in one of the all-time great radios.)

Sorry about the errors. Senility ...

Best,

Joe

My Icom R71A audio improved immensely by the use of one of the add-on computer speakers that has really great low frequency response. That coupled with the outboard JPS NIR-10 Noise/Interference Reduction unit makes it a real joy to operate.

The speaker is a about a 3x5 inches with a heavy magnet and a tuned port at the bottom for some reason. I an no audiophile for sure. It just sounds great.

Not only that but the stock filter is crap and the only logical step is to
replace it.

Well, I listen to US domestic SW. Sure, Alex Jones and Brother Stair may
also be found on local broadcast outlets. But there are plenty of very
enteraining members of the "hidden knowledge" group found exclusively on SW.

Huh? Other countries use SW broadcasts to demise us from those on the
inside? Does this have something to do with HAARP?

> What you call "Domestic" USA short-wave is not domestic at all as
> technically its illegal as one post put it earlier.

What's your point? US SW broadcasters broadcast to a domestic audience 24
hours a day, wheather it's technically illegal or not.

If these laws exist, they aren't being enforced.

Are you suggesting US domestic SW radio is some sort of illusion?

>As far as being
> religious nuts, that is just your opinion.

"Nuts" is such a harsh description. I prefer the term "hidden knowledge
crowd".

Not that I'm disagreeing with the term "nuts", however.

I just got this unit at the ABQ swap and started looking for a a manual with Google and found that unit is differnt from the ones I've found pictured. It has 3 Collins mechanical filters. At the top upper left it has a Squelch control and next to it is a Noise Silencer control. The mode swtich is labeled AM and SSB/CW. The lettering looks factory done. The filters have been added on a sub chassis and I'm not sure it is a factory mod or homebrew but it has been nicely done. The S meter was made by Texas Instruments. It has some problems including lots of nosie, hetrodynes, etc.. I've only seen one of these in the past and can recall which version it was, they must be scarce? Anyone have any info?

The law does exist and is being enforced loosely. Domestic shortwave stations are required to have directional antennas and there beam heading has to be outside the US. It is easily gotten around by using antennas that are directional, but not very, and targeting the main lobe to a part of the world that would ensure that secondary lobes cover the US. The law also states that commercial advertising is not permitted unless it is of a nature that would appeal to an international audience. This is being blatentenly ignored. No, the FCC is not doing it's job.

Hank,

The Hallicrafters didn't come with mechanical filters. The R-274 series actually had receivers built by both Hallicrafters and Hammarlund. The Hallicrafters were designated R-274/URR, R-274D/URR and SX-73. The Hammarlund SP-600's that had the R-274 designation were listed as R-274A/URR, R-274B/URR and R-274C/URR. The full list can be seen at: http://www.hammarlund.info/sp600.html

How about a photo of what you got?

The clock circuit uses DC for the active componants but there is a
connection through a capacitor to the AC line to a pin on the clock chip
to sync' it.

Is the ban of domestic programming from US private broadcasters a law or a FCC regulation? I suppose I should have done my homework on this question, but I haven't.

Anyway, I think the FCC is allowed much more latitude in deciding if it will enforce it's own regulations or not. There's little practical difference between the FCC deciding to not enforce a regulation and the FCC overturning their own regulation.

Ok. Yea that would have been a rare one allright. It's either a SP-600 or a SX-73. The collins R-390, 388s etc used the URR designation and other radios but I've never heard of a R-274 under that. I'm just going on memory so I could be wrong.

Source record: 6998

SD,
.
REMEMBER : You Can NOT Solve All RFI/EMF Noise Problems . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2133
.
INTERNAL HOUSEHOLD NOISE SOURCES VIA HOUSE WIRING:
Buy a bunch of Clamp-On/Snap-On Ferrite Cores and go
around placing one on each Electrical Appliance very
close to where the Power Cord comes out of the Appliance.
As you do this to each Appliance {one-at-a-time} use your
Radio(s) to check for any resulting aparent RFI-EMF Noise Reduction.
- - - Start First by "Placing" Clamp-On Ferrite Cores on
the AC Power Cords of Every Piece of Equipment in the
Room that you have your Radios in: Your Shack.
HELLO - I Will Repeat Myself : Every Piece of Equipment
in Your Shack. For both my Grundig Satellit 800 and Icom
IC-R75; which use External Power Supplies. I use a
Clamp-On Ferrite Cores on the AC [Input] Power Cords about
6" from the AC Power Plug. Then I also use a "Donut"
Shaped Ceramic Magnet on the DC [Output] Cord about 6"
from the DC Power Plug.
NOTE - These Donut Magnets can be bought at RadioShack
and 'look like' a 1"x1/2"x1/4" Ferrite Toroidal Core; but
they are Ceramic Magnets. aka: Refrigerator Magnets
TIP - If you buy/use the big Clamp-On Ferrite Cores;
after the First 'pass-thru' you may find that you can
Loop the Power Cord around for a Second 'pass-thru'.
Keep this Loop small and close to the Body of the Ferrite
Core.
Use a Plasitc Cable-Tie if need to hold everything together.
.
EXTERNAL POWER LINE AS A NOISE SOURCE:
If you are having a problem with Noise getting into your
Radio Equipment 'via' the Power Lines. You can "Isolate"
the One Circuit that feeds your Equipment and 'install'
individual Feritte Cores on each Leg of the service (all
three wires). NOTE - This can be done inside the Outlets
Electrical Box and/or at the Branch Line to that Outlet
at the Main Power Panel by a Licensed {Qualified}
Electrician. This depends on many things. Your House
and its Wiring. Your 'ability' to do your own Electrical
Wiring to Code; or your need to have it done by a Licensed
Electrician.
How To - Basically, If you have all your Radio Receivers

in one Room and the Electrical "OutLets" in that Room
are on One Circuit. Then you go back to the Main Circuit
Breaker Box and 'follow' that "Circuit" out to a point
where you can install a Metal Electrical Box. You place
your Ferrite Cores in this box. One on each of the Wires:
Black, White and Green. Please Note: This can be a lot
of work.
.
More on Clamp-On Ferrite Cores
http://groups-beta.google.com/group/rec.radio.shortwave/msg/e9132f2f8518080e

.
Don't Forget Your Telephone Lines and RFI/EMF Noise
http://groups-beta.google.com/group/rec.radio.shortwave/msg/5012ca0a5999d04c

.
Use Clamp-On Ferrite Cores on your Coax Cable Feed-in-Line.
http://groups-beta.google.com/group/rec.radio.shortwave/msg/03552b915a33481c

Where your Antenna Wire connects to your Coax Cable;
Or where your Coax Cable Connects to the Matching
Transformer Balun/UnUn/MLB install a Clamp-On Ferrite.
.
.
REMEMBER: You Can NOT Solve All RFI/EMF Noise Problems . . .
But You Can Eleminate The Big Ones - And That's A Start :o)
.
.
THE [HIDDEN] FERRITE CORE IN YOUR ANTENNA,
GROUND AND COAX CABLE FEED-IN-LINE SYSTEM.
At the Heart of your Matching Transformer : Balun / UnUn
/ MLB is a Ferrite Core that can help solve many of your
RFI EMF Man Made Noise Problems. Taking a 'second look'
at the Antenna Wire to Coax Cable "Connection".
.
IMHO - The best was to make the Antenna Wire to Coax
Cable Connection is to use a Matching Transformer Balun
UnUn or what is called a Magnetic LongWire Balun.
+ These devices make the Electrical-Mechanical (Joints)
Connections between the Antenna Wire Element; the
Ground Wire; and the Coax Cable Feed-in-Line.
+ These devices also help to 'match' the "Impedance" of
the Antenna Wire Element to the Coax Cable Feed-in-Line.
+ These devices provide a "Direct-DC-Ground-Path" for
any Electrical Discharge pasted through the Antenna Wire
Element to earthen ground.
+ The Main Component {Heart} of the Matching Transformer
is the Ferrite Core.

Henry -

This is definitely the "Hallicrafters" SX-73 version of the R-274. I've had a couple of these pass through my hands and have one right now. But yours seems highly modified. Also, I have never seen the front panel painted with the color yours is - Does it appear original? The two additional knobs in the upper left hand corner are new - On "normal" SX-73 models, there is nothing but a channel tag there. Also, I notice one of the toggle switches is labeled, "calibrate" when on the standard SX-73, it's a switch for the Automatic Noise Blanker. Finally, I notice there is a "notch" adjustment in the middle on the lower rows of knobs - on the standard SX-73, this is a Crystal Phasing adjustment.

Yours is quite a rare find, indeed - I have never seen one like this. The scope of modifications would suggest these were not home brew modifications - if I'm wrong, whoever did it was highly motivated!

Now, would you be interested in parting with this unit :-)?

Enjoy your find!

I've been watching Hogan's Heroes reruns and in the beginning they show
Kinch operating some sort of radio. He's shown turning a crank looks like.
What sort of radio could that be?

Oh my God.

If it's Scotch, it's distilled in Scotland. Why we would we pay extra to
have it imported to the states through Cuba when we already have it imported
here directly?

Feel free to forward this post for publication consideration.

--
I wrote the letter following "Jew Boy..." the day a single complaint
arrived to the radio station, with the threat that the ADL would soon
be contacted. The letter was provided in advance of the next day,
of the time scheduled for the complainant to return for a recording
of the questionable broadcast. The station manager refused to give the
complainant my letter, and insured me that I would no longer be allowed

to produce a show for our community. Is this fair to our Jewish
brothers
and sisters? Is this fair to You?

Paris "And then what if you saw, all of the things thats wrong,
would you stand tall and strong? Or would you turn and walk away?"

Johnny

Jew Boy Johnny and the anti-Semites

- or -

"The Zionist Conspiracy"

Monday, January 31st, around 3 pm, I called the station manager to ask
how my afternoon recorded broadcast went, and to discuss the new
week's tentative guest spot with an update regarding the falsely
maligned, Mr. And Mrs. Benderman. The station manager informed me
my phone number had been misplaced, and was managing with stress
trying to put together an apology letter to a single individual, who
came into the station, while the interview was still running, to
demand action be taken regarding the anti-Semitic broadcast that he
was certainly going to report to the ADL about. I told her the Felton
interview itself was about bigotry through the demonization of the
innocent, what the Jews of world war II suffered through, and, that I
was a huge defender of religious Jewish teaching. I told her, to
offer the individual a chance to publicly speak regarding the issue,
with me, or by himself regarding Felton, to try getting specifically
to what has got him so much, by himself, upset about allowing my voice
heard defending Jewish rights within our community. She told me that
she would likely, none the less, have to let me go to appease the sole
complainant, for what if a lawsuit should result? I told her to
consider her options, reminded her that it was only one single

individual who hadn't even heard the show's context, and that the broadcast in every other way had been going well, doing good. She told me she was very busy, and said goodbye. Then a short while later, phoned me back to ask if I would write a letter, and have it at the station next day before the complainant arrived for his copy of the broadcast. I said sure, said it would be a great challenge, and proceeded immediately to do just that. The next day, I contacted the station to ask if my arrived letter was forwarded to the individual, and was informed no, he didn't receive it. It wasn't the apology the station was looking for, and my show was now officially terminated. I told her it was very unfair to me, to not allow him to read my formal response, and that I couldn't in good conscience, back down from defending my rights to be heard on this issue, or to allow us, as our public, to hear the complainant's actual complaint about my, freedom for all broadcast. She said she would try to get the letter to him, but that the show was over. Case closed.

Stand up for Jews, and look at where it gets you, Jeeze.

Let us not put aside, the station manager's legitimate concerns. Who has the money or the time for a frivolous lawsuit? Why do expensive independent research, when the Bush Administration can hand us all the free news they want us to have directly without any costly questions? Saddam wouldn't let the inspectors in, right? Why risk standing up for someone else's rights, when doing so, will get the (anti) Jewish-Defamation League calling you an anti-Semite (Semite=Arab) for communicating some understanding with Felton? Felton, is bizarrely quirky as interesting, for his recent book is about the demonization of the innocent, (you know? Nazi gas chambers and ovens?) and as such, we can learn from, as too, we can teach. If he'll listen. Ariel Sharon is not Jewish my friend, NOT JEWISH!!!

Open the gates, it's getting late.

John.

---

http://radio.indymedia.org/uploads/big-package.mp3

Greg Felton : "The fear is necessary for two reasons. And the principle
reason has nothing to do with Iraq. it has to do with the government itself.
The bush government is criminal. [...] The problem is: how do you keep
people from paying attention to this? You keep them focused on an external
enemy. [..] so they forment this fascistic hatred of a definable group of
people. So, the war on terrorism so called, is not much a way for the United

States to protect itself against it's enemy, it is a way for it to create
enemies, to justify the kind of repressive measures that would otherwise be
intolerable in peace time."

To whom it may concern,

regarding the January 31st broadcasted interview with Greg Felton.

May I, on behalf of only myself, ask that you pardon my failures in judgment,
in not allowing what I should have gave: an immediate re-dress regarding,
'who is the Zionist label?', or 'What Holocaust are you referring to?', during
the broadcast of January 31st. (bet you we can't get two Christians that agree
on everything.) However, I can offer perhaps a show centralized on a chance
to exercise your personal views, be they pro or con on where you think we
should go from here, or whatever may have you regarding said interview. Or,
if you would like, you may wish to do only, or else include, a written work
that I promise, will reach as far as the original broadcast. So, actually,
this could be a prime moment to have a dialog regarding racism, bigotry, and
intolerance. I confess, I may be unaware, and still have much to learn, when
it comes to communicating well with all others. But, I know I'm getting
better, and I'll tell you, the Justice-Freedom thing, sure seems to be our
ultimate calling.

I was not so surprised that the broadcast interview with Greg Felton would be
considered controversial, (as every show I've ever done always has), although
I wasn't prepared to hear criticism against the show as being defamatory to a
group, or groups of people. As certainly that was not my intent, but however
was the difficult subject addressed within the interview. The fundamental
teachings of Law, as it pertains to justice and freedom, along with every
legitimized religion, is that all free people should be thought of as

equals
to each other in vigilant protection. And by doing so, one would be
serving
G-d's interests. (Even if a G-d doesn't exist - an Atheist too, could
become
a proponent by understanding Jihad). Thereby insuring\realizing that a
just
intelligent life force rules our chaotic timeless universe in service
ultimately to ourselves individually. Giving us in the Torah of Moses,
``all
people are created in God's image'' teaching all peoples are Sacred.
And as
such, would be so in God's interests to defend as the innocent. While
in
eternal pursuit of happiness and prosperity for all through just means.

Under Greg's definition as being a "Zionist" conspiracy, negates the
failure
of himself personally to recognize the public connotation is too vague,
and
that Hitler's Nazi Germany, like Bush's America, is politically
expressing an
inability to represent ourselves with respect as truly worthy of fair
deliberations amongst ourselves. Sacred, every-one. (Or as in, to
rise to
the defense of those we know to be irrationally victimized as the godly
and
innocent, victimized in our un-addressed names.)

Greg "This is why the Holocaust is such a very dangerous thing to talk
about
because, it's not really understood. It's preached at us like a
sermon.
We're suppose to accept at face value what we're told about it, as if
to,
criticize it, is some how disrespectful. Much of what we know about
the
Holocaust has been propagated by the Zionists, and can be shown quite
untrue"

I replied shortly later "One thing about the whole situation is that
innocent
people were targeted for murder. End of story. That's what the war
was.
All wars are like that."

Greg's mistake I believe, centered in his Zionist labeling through an
apparent bigotry expressed, and as such, was too narrowly defining the
larger
established history of the Holocaust, as being the struggle of the
human

species in halting, the demonization and then subjugation of the innocent millions, Jewish or otherwise. Perhaps it was strangely on his part a testimony to a real struggle we all have when it comes to identifying ourselves to others. Considering it is the exact subject matter he wrestles with in his book writing, regarding our corporate media's perception of ignoring an innocent people's concern or cries. That said however, for Greg to blankly criticize Greg's false construct of what is publicly understood about the Holocaust, is to deny that much for sorrow and suffering took place against the whole of Humanity, especially, of those who held the practiced Jewish faith. To think the nazi regime would have the gas chambers and the ovens, while the whole of humanity were not strong enough to communicate the unjustness of it all to the German people while it was happening. I have read of a recent documentary that provides film footage of nazi soldiers committing the worst war crimes imaginable to god loving Jews, interspersed with film from the same dated period where, the German people were living civilized lives, left unaware of the atrocities that were being committed against God in their names. Same as America and Canada today, with Fallujah's 300,000 People being, the undeniable example. Or, are you too, a convinced denier of that which is fully documented? (Needless and irrational was the indiscriminate murder of the people of Fallujah, but for to have more American soldiers sacrificed in a conflict created by an unjust as immoral totalitarian dictate.) The Holocaust deniers are those the same of today, who refuse our Humanity to nationally communicate those screams of mercy, or for justice regarding the People of Iraq to be served in our true interests as legitimate. More than ten million Russians died fighting the evil eugenic scourge of the "superior" nazi regime, and like those in Poland, Britain and France, as elsewhere testified our established history, (albeit only later),

the sadistic ungodly as lawless barbarity that Nazism inflicted upon
the
general masses, went largely undeterred from our "informative"
television and
radio broadcasts. The same, almost word for word, and action for
action, can
be found in Rumsfeld's "blitzkrieg". Bush's freedom by tyranny
doctrine. Or
the criminally sanctioned unchallenged news pronouncements of a Mark
Kimmit,
Buford Blount, Steven Russell, Mattis, Allawi or Sattler, when it
pertains to
accepting without our objection, to the victimizing of Iraqis
collectively as
an indiscriminate act of criminality, like murder. As like in the
policies
of Ariel Sharon, where an innocent, haven't committed an accused crime
in
their life Christian Palestinian, is denied the earned home they worked
and
paid for, on a parcel of land shared up until recent times for
countless
millennia. My personal struggle has been to inform the public on the
"forgotten" importance of established evidence, being the only
requirement to
convince ourselves on who is a bigot, tyrant, a criminal, or a
murderer.
Will you not therefore, as a fellow humanitarian of this shared world,
speak
against those you know of, who victimize the innocent to thieve from?
Sure
you would, if you knew as much for certain about God and this universe,
or
the under reported, freed to go General Ahmad, funding the mastermind
ring
leader Mohammad Atta of Bush's 9/11 game. But will together our
Humanity
ever learn? Well, my plan is to search for guests to speak with, that
I'll
try not to offend early on. Greg knows, like the Pope knows, as every
legitimate police officer worth their grain of salt knows, as so too
does
include a great many Jewish Jews, George W. Bush used absolutely no
evidence
to substantiate his therefore, false accusations in our names against
bin
Laden, while then ardently with Cheney, worked to close outstanding
criminal
investigations regarding their extremely suspicious behavior. All
according

to his official publicly documented plan. And speaking the news as thus,
does not make anyone anti-Semitic, anti-American, or anti-Human, but
pro-Jewish, pro-Christian, pro-Muslim, pro-Justice pro-Freedom, almost
wholely human like even. Not of a long gone as lost and forgotten religious
dogma, but for now as it always has been found, a mutual respect for all life
as we find ourselves being part of. Or, so we would for Atheists, argue in
all likelihood to get to the same reasoned to be, just political decision, to
this or any another life and death matters matter.

Because the unjustified criminal war actions of George W. Bush are our
shared documented history, others, with an ulterior agenda to propagate their
weakness through bigotry or racism, will arbitrarily blame a subjective
grouping of people, instead of demanding by godly individual might, the
arrest of specific individuals who are actually responsible according to the
established as public evidence. So, now who's fault is that? We live in
difficult times. To admit weaknesses regarding our corporate news control
content decisions, is to seek a better world for our lives through stronger
open communications.

I believe the defense of the Jewish faith is found in the indivisible
properties of Creation, and who's central belief is made simpler than any
other. Hillel was asked: Rabbi, who is a Jew truly? Hillel answered, "What
is hateful to you do not do to your neighbor. That is the whole Torah. The
rest is commentary -- go and learn it." So my challenge in defense of the
Jewish faith during the interview, was that those who practice criminal
misdeeds, are therefore found by the official definition taught by Hillel, to
be not practicing the "Golden Rule" of the Jewish Faith. (as so pronounced
by the religion's recognized ancient oratator.) By calling alleged criminal
actions, the conduct of an entire people, faith, or branch thereof, is to
fall into the fascist minutia of bigotry, or racism, held by those who judge
us "others" unfairly. After re-hearing the interview, I did find the
allegations made by Greg, regarding the Holocaust being blanketed by

falsehoods, generally, a failure on his part to recognize the true horror of
what that war wrought. And in light of our desperate challenges today of
defeating the enemies of Humanity as specific unjust individuals in "hiding",
an ignorantly stupid thing to say. While I, perhaps wasn't thinking along
those conceived lines, where at that time, I had just left the thought of:
the struggles of the Jewish faith, are the same struggles all young adults go
through by naturally establishing our associative identities. Who are you I
truly ask? How many news channels even allow us as Humanity to know about
the absent reason for the bombing of the Jews of Samara? The Jews of
Fallujah? The torturing of completely innocent People to death, as in
Guantanamo? Or still unaddressed publicly: the willful lawless criminality
implemented by the, therefore tyrannical Bush Administration in suffering
God's Iraq? (See missing ``Development Fund of Iraq'', or private
mercenaries discipling for Bush as deemed un-accountable to every conceived
``natural'' law? [see the entire Bible for the judgment call on that one...]
or, Bush's declarative, he magically owns everything in stolen Iraq now,
[where did it go?] and I can't say anything because he signed his John to
13303 some time back, but as still is left unreported in Your dying world?)

Publicly question our reality, by taking the station up on doing an interview
with me, along with your own impressions of our world. Or, if you prefer,
you can do a solo written piece, or a recorded statement for the station. I
look forward to finding common ground with your concerns. I hope I have got
you wondering more, about what trying to save our world from injustice and
slavery, in whatever way we can is all about for me really. In these words I
can say, I apologize to you, for a resulted perception, that wasn't with
better words, my true intent towards us people together.

I will, after some small revisions of this paper, include it as well as the
broadcast package. So I do thank you for bringing up your important view,
that otherwise, would have gone farther without this opportunity, that I
offer as a starting point for deliberation, or argument regarding my
foolishness. Thanks for speaking, and I hope I have met most of your
concerns with a positive light on where I'm trying to come from.

John.

---

http://radio.indymedia.org/uploads/benderman.mp3

The Benderman Cause

I felt compelled to support the Benderman's cause in
any way I could, so I am providing America some
arguments that I would use in a court of law to
defend your freedoms. If America would so desire,
I would also be prepared to make a recorded
statement from here in Canada. (I have been
denied access into the U.S..) My positions of
rational argument are naturally based upon our
established facts, and as such, are something few
Americans are afforded the luxury of through
corporate channels. I hope my forcefulness on these
issues does not fear you to doubt I have the best of
intentions when it comes to serving the interests
indivisibly inherent within the American
Constitution. God, I believe is just, and as such, the
ungodly war actions of George W. Bush dictate are
criminal in the worst degree, being a harbinger of
suffering and misery against all of Humanity as
US being the innocent. The innocent in our entirety,
is my "God" that I love with all I can will. I am
compelled as a living human being to defend America
to the last bush supporter praised if need be. I fight
the enemy of God and Humanity with reason,
understanding, Akeido, and a conviction that our
justice system must prevail for me to be truly myself
really.

"He explained to "60 Minutes," "I was told in basic
training that, if I'm given an illegal or immoral order,
it is my duty to disobey it. And I feel that invading
and occupying Iraq is an illegal and immoral thing to
do."

The war was declared "illegal" by the U.N..
Why? Because Saddam wasn't found in breach

of the internationally agreed upon resolution 1441, (Saddam did EVERYTHING POSSIBLE that was asked of Iraq by the bush administration, and then some Mr. Bush refused to even take him up on. Like national Iraqi television broadcasts.) despite the lies quoted by corporate news America. There was no need for the conflict to begin with as was so reported internationally on march 7th, 2003. U.N. inspectors had complete unrestricted access to go anywhere without delay, and known stock piles of WMD were burned, so could not possibly be completely accounted for by evidential findings due to the fact that they were destroyed beyond recognition. American soldiers were put in harms way to be sacrificed for no better good, but for to allow as has happened, the misappropriation, or as some have alleged, the criminal theft of Iraqi resources, including monies of the Iraqi Development Funds through Presidential decree 13303. Which include the unappropriated, desperately needed, humanitarian aid provisions still denied innocent Iraqis, such as potable drinking water and food stuffs. Democratic principles are DENIED the Iraqis by the neo-con military forces, such as holding all individuals equally accountable to a rule of law. The outlawing of torture, or the outlawing of false imprisonment has not been professed as the action of the neo-con "liberating" force. Mercenaries are not obliged to obey any laws for example. And, "Dr. Germ", and "Dr. Anthrax" are held solely for the fact that they know of the scientific hazards of depleted uranium, and may have warned the uninformed sacrificing American GI, if not held illegally against their wills by the enemy. Commanders such as irrational war criminal Sattler, forbade all men and boys between 15 to 50 from leaving the city of Fallujah, while refusing to negotiate with anyone, (because as so was openly confessed, Sattler had no evidence that Zaqari was in Fallujah) then leveled the city to kill all it's inhabitants, estimated at that time near 300,000 people. Using a napalm type WMD, cluster dud land mine munitions, and as reported, nine two thousand pound bombs in a city 3 1/2 km by 4 km. Serving for a military not strong enough collectively to prosecute such lawless criminal barbarity, is serving for a military not principled in the American virtues of freedom and democracy. In truth, serving for such ungodly criminal command is a cowardly act of treason. George W. Bush is an

enemy of our Humanity.

Copy and distribute this personal challenge freely.
Thanks.

--

I know we're all expected to be selfish, in helping out those others
who cry out for our help, but I beg you, I can't do this alone. My
show did make a positive difference. I need your help in asking I
face my accuser, and politely, with reason, using communication,
and understanding, bring about a better world.

World Productions.

You missed my point- they are no more useful at preventing brain cancer than
is the "antenna enhancer" card for extending cell phone range.

Hi John A.

1. Define "Very Good Receiver"
2. Please describe the condition of your unit, listing: age, scratches,
malfunctions, missing parts (Microphone, Instructions, etc.)
3. How did you come to possess it. (i.e., bought new, bought used, result
of a trade)
3. How would the deal be brokered? Like a Mexican Standoff, through a
competent intermediate, etc.

Regards

Soliloquy

http://www.eham.net/reviews/detail/3046

Apparently there are 11 pages of reviews of this radio on E-Ham. Although
many people hold it in high acclaim, others describe problems and confusion
with the use and operation of the unit. The reviews include the Yaesu 857
and 857D. The information in any particular review may not be applicable to
this model.

Zach Liang schrieb:

> First my idea about the MP3 recorder:
> -96-112 kbps for FM Stereo

112 max seems a bit tight to me. Even with frequencies up to 15 kHz only, the maximum should be the equivalent of ~200 kbps ABR/VBR from a CD (around 160 or so?). Noone has to use that, but the recording from a high-quality station at maximum quality should be indistiguishable from the original even using good headphones.

> -max 20 kbps for AM

A selection of 16, 24 and 32 kbps seems reasonable.

> It can be useful if common flash (removable) memories will be used

Yup. Since size is not an issue, I'd look at CF. Stuff in a big Microdrive or similar and record forever and a day, plus potential incompatibilities are minimal since CF cards have their own controllers.

> What about adding VHFII band? (150 -180 MHZ)

Hmm, what's that used for? It would most likely require a separate frontend since you can't expand FM band coverage indefinitely.

Now that would be fairly huge. Sure sound could be very good, but
portability really suffers. I'd even have trouble fitting such a beast
on my desk or nightstand. It would, BTW, be advisable to use the largest
speaker that fits the case (unlike the '800, which only uses a 10 cm
speaker, a joke given the size of the thing).

It might be aeronautical traffic on that frequency; listen for their ID, if they are broadcasting weather conditions they may ID themselves as "New York Radio". If they are managing air traffic, you may hear them ID themselves the same way, and be directing aircraft to change direction or altitude, taking check-ins from flights or giving approach control frequencies or giving other SW frequencies to use to communicate with other air traffic control centers. I don't have my radio on at the moment because I have the computer on, but a quick check did not show anything at the moment.

I heard some good reviews on here from people, then I got one and it stinks. I thought I got a bad one so I sent it to the manufacturer (kaito usa) and they said there was nothing wrong with it. Enough said.

A few things.....either a broad band or tuned RF amp ahead of the
1st mixer. A tuned RF amp affords better image rejection, especially with
single conversion receivers that have only a 455kHz I.F. amplifier. I.F
coils and antenna coils wound with Litz wire are also helpful. A selective
I.F. strip, using either Litz wire wound coils or ceramic filters are good.
FETs in the input stage are good for cross-modulation rejection. Good audio
amplifier etc, etc, etc.
I hope this helps.

Pete

One other thing I forgot to mention.....three point tracking of the RF/Mixer/LO stages. This was done on some of the older higher end portables that had the metal frame tuning capicators vs the newer miniature plastic tuning caps. These older style caps had the outer plates in the tuning gangs split in three or four parts (I don't remember exactly how many). This was good, because instead of being limited to using the trimmer caps at the high end of the band and the adjustment coils at the low end of the band, the middle of the band could be compensated by bending those outer plates to adjust this section.
Ulrich Rohde discusses three point tracking in his receiver design book.

Joe Analssandrini schrieb:

> Synchronous-selectable sideband reception is a MUST.

I forgot this in my original post. Yup, a low-distortion AM detector of some kind is virtually a must. Notoriously distorted diode detection just doesn't cut it for serious listening. (Besides, the Sat 700 already had synch detection.)

> Should be designed
> at least as well as that on the Grundig Satellit 800.

Quite tricky, given the folks at DEGEN have no experience building synch detectors so far.

> Full passband
> tuning would be even better.

Sure, but I've never seen that in a portable.

> Lock must be held as well as on AR7030
> model

That would be great. It virtually never unlocks (and even if it does, you don't notice much since the receiver is still using the very low-distortion product detector). BTW, if synch audio quality were anything close to that on the AR7030 this would be great. I was amazed by how good AM can sound that way. (It's just that the AR7030 doesn't match my usage pattern very well and usually resides in its box. Seems silly, but maybe I'll be able to put up a decent antenna one day, and then I'd be sorry to have sold the thing. It's unlikely to lose much in value anyway.)

> and must automatically turn off when tuning and then re-lock when
> station is selected.

That would be the standard way of implementing it, I think.

> A good notch filter (with at least 50 dB depth) with range of 0.1 - 5
> kHz.

That sure would be nice, but did any other portable ever have one?

> At least 3 IF filters (bandwidths) (preferably 4) of 2.2 kHz, 4 kHz, 6
> kHz (and possibly 1 kHz for data/CW);

I don't know whether that's realistic in a portable. Still, a 2.2/4/6 kHz combo would work well.

> operation of these filters should
> be cascaded so that inexpensive ceramic filters will give much better
> performance than usual.

However, you can't cascade indefinitely. Passband ripple will mess up things at some point. The AR7030, BTW, uses a 4-element 12 kHz tail filter along with some 6-element ceramics and a high-quality SSB filter (Murata CFJ). If a good SSB filter is not within the budget, cascading the 6 and 4 kHz filters might also work (which would give a caascade of the 12, 6 and 4 kHz filters overall). The 12 kHz might also be useful for DRM or really indisturbed AM reception. BTW, with good filtering present, low oscillator phase noise is of high importance. That's one of the reasons why the AR7030 achieves such good selectivity.

> All shape factors should be less than 1:2.

Actually that's true even of the 6-element Muratas like the one used in the 7600GR.

> Dial illumination via LEDs, perhaps color-switchable (Red, Blue,
> Green).

Now that would be nifty.

> Dial light scheme similar to Grundig Satellit 800. (Always on or always
> off with AC power, on for 15 seconds with any button push when using
> battery power, or always off with batteries, as desired by user.)

This concept does not seem so uncommon, our Sony ICF-M60SRDS also uses it.

> Line outputs for external speaker(s) and stereo system. Excellent sound
> quality is a must.

Shouldn't be that much of a problem, decent-quality opamps like 5532s aren't expensive these days, and decent-quality electrolytics aren't that much of a problem either.

> Independent tone controls (Treble and Bass) should
> be incorporated. Internal mono speaker of high quality is preferable to
> mediocre stereo speakers.

ACK.

> At least two external antenna inputs for AM/SW (high and low impedence)
> as well as an FM antenna input.

That seems reasonable. Now the question is, what norm would the FM ant input conform to?

> IBOC reception (AM & FM) for the US. Canadian DAB. (Possibly European
> DAB.) Self-contained DRM (or a 12 kHz IF output to connect to a
> DRM-equipped computer).

I'd consider DRM as a world-wide standard to be more important than DAB.

> Clocks should be RADIO-CONTROLLED

Good idea, but by which time signal station? Making this variable
requires considerably more efforts. (Typically a narrow-band LC tuned
front-end filter is used, which has to be laid out or at least adjusted
differently for the various frequencies, e.g. MSF 60 kHz for UK folks,
DCF77 77.5 kHz etc.)

> (and operated independently from
> radio and powered via 2 AA or AAA batteries). Two times zones should be
> available, one of which should be UTC. Local time should be adjustable
> for daylight-savings time (via radio control) if required; UTC should
> NOT be affected by DST change. One of the clocks (including seconds)
> should ALWAYS be visible, radio on or off.

Very reasonable suggestions.

> No LEDs (except for dial illumination and possibly button
> illumination). Properly calibrated digital bar graph S-meter of at
> least 12 segments.

I guess most people would already be happy with a *useful* meter that
doesn't read full strength 95% of the time, yet also catches fairly weak
signals and has a pretty wide range.

> A high-quality plastic cabinet or, preferably, a light-weight metal
> (aluminum or magnesium) cabinet.

I don't know whether a metal case would do the sound aspect any good.
Plastic is more realistic anyway.

> ALL internal components to be of TOP-QUALITY (formerly known as
> MIL-spec).

Isn't that asking a bit too much?

> Excellent sensitivity; a 3 or 4 step attenuator (or adjustable RF-gain
> control) should be incorporated.

A 2-step attenuator would most likely also do. RF gain was more
necessary in the old days to get SSB demodulation with fairly lousy
detectors right. A switchable AGP time constant/behavior, however, would
be a nice touch.

> All other specifications to be of Drake R8B/AOR AR7030 caliber,
> especially blocking, ultimate rejection, image rejection, and, most
> important, dynamic range.

I guess the receiver will be priced at around ~500USD/EUR, so not all of
this will be possible.

> Excellent sensitivity (a 3 or 4 step
> attenuator would be of help).

Depending on how sensitive the thing becomes, either a pre-amp for the whip (as done in the Sat 700) or a pre-attenuated ext ant input (we don't want anything to blow on large antennas) seems like the more likely solution.

> A carrying case (nylon or leather) should be optionally offered; this
> should be able to carry AC adapter, batteries, and any other options,
> as well as fully protecting the radio.

Seems like a good idea, though this kind of rig will never be as portable as a DE105. (BTW, I sure would like to get my hands on a DE1105. The '105 isn't bad for what it is, but doesn't perform as well as I'd like. And since the '1105 isn't a lot bigger, this seems like the perfect model to upgrade to.)

> Servicing is important. All service information should be made
> available on line.

That would be great indeed. At the very least there should be some way of obtaining service docs at all.

Good point. I like SR5 even better and it's now free:
http://www.ar5.ndo.co.uk/ ....

I tried that one out...Not bad... One neat feature is
the "draw a filter" capabilities. You can draw a
passband filter with your mouse, up on the top
filter bar, and it adjusts in real time as you shape
it. "not counting the slight delay most all puter DSP's
have from the input... Pretty kewl...
IE: Wanna midrange peak, just draw it, and you can hear
the filter change as you draw it.
Wanna CW filter with 400 hz width? You can draw it in a
flash, and it's instant on....Another worthy entry to
my DSP collection...:)The only thing about the puter DSP's
I don't like is the slight delay..It's no problem for just
listening, but it's a royal PIA if you are working CW, and
need to hear your sidetone in real time. So to use the dsp,
I have to either cut it off when sending, or use a stand
alone sidetone for the keyer... MK

I read what the liberals are saying these days and I'm sorry but it is
all about them getting back power even if they have to take positions
against people gaining their freedom.

Liberals do not appear to support free speech either these days unless
it is calling the people that died in the world trade center nazis.

<http://story.news.yahoo.com/news?tmpl=story&cid=533&ncid=533&e=7&u=/ap/2
0050206/ap_on_re_us/speaker_protest>

Liberalism is insanity these days. This guy is typical of left wing
thinking.

Ok, so it's not a Sony 7600. But it's a pretty good performer for $50
(the Degen version sold on ebay, Kaito charges twice that, which isn't
worth it). But conditions are so poor that my 1102 is pretty much
useless for the moment, just sitting on top of my Yaesu tabletop while I
try to hear BBC through all the QRN using LSB. :(

Why is it that no matter which side of the political spectrum you're on,
everything that someone on the other side says has to automatically be
dismissed as tripe, lies, or whatever? Wake up folks.. there's both
bullshit and truth on both sides. It behooves us to listen and learn. Assess
and categorize, don't just toss everything that doesn't go along with what
you think you know at the present. If everyone did that, we'd still be back
in the stone age. I'm saying this equally to liberal and conservative.

The ONLY reason that free, over the air TV and radio is being phased out
for pay services is that subscription TV/radio is more profitable for
the NAB, which runs the FCC. Once again, the regulators get caught in

bed with the people they're supposed to be regulating. Of course, conspiracists will note that subscription services are easier to control for government propaganda purposes, but I still suspect that the main factor is MONEY. Who WOULDN'T want to force one's customers to subscribe (BIG $$$) to a service which could previously be picked up free with an inexpensive receiver? Apparently advertising dollars aren't enough for the media services, they want hefty subscription fees too.

Uh oh - a voice of reason. Now you've done it!

3076. Advice to Hams and SWL's from Igor

Newsgroup: rec.radio.shortwave
Date: 2005-02-06 02:43:00 UTC
From: morris <morris@yahoo.com>
Message-ID: <11a61$42058439$d8536ff5$22595@snip.allthenewsgroups.com>
Source record: 7075
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.shortwave

There's a LESSON here you hams and radio freaks.
What happened to this baseball collector can happen to a
radio collector also....and I know SEVERAL xyl's who'd
just LOVE an opportunity to trash or sell off all of her
hubby's "ham radio junk" just to have him pay her more attention..... ;)

---- cut ---

Ex-Wife Auctions Man's $200,000 Baseball Collection
From the News Section of: http://www.voyeurweb.com/main/Main.html

TUSCON, Arizona -- A woman whose husband spent $200,000
on baseball memorabilia took revenge - by divorcing him and selling
it on eBay.

The husband, 42, told his wife, 45, they couldn't
afford kids or a house, and even took money from
her bank account to add (baseball items) to his collection.

The divorce judge ruled she can have the rare baseball
cards and caps, and she is auctioning them online,
according to news media reports.

The couple had been married for 17 years.
When asked about the auction, the wife
said: "I'm giggling."

-- Holy Strike Out, Voyeurwebbers! It sounds like this guy got
caught looking at an inside fastball and never even swung at
it, hehehe! Meanwhile, his wife managed to knock one out
of the ball park. It wasn't just a grand slam, either, it was a
200-grand slam, hehehe! There's also an important lesson
in this story, Voyeurwebbers: ***If you're hobby becomes
your life ... it's definitely time to get a new hobby***. -- Igor

To tell you truth, I'm not sure I want to know.

No, scratch that. I'm sure I want to not know. Unzipping his pants, sitting down on Blueberry. The voyeurism gets to me as well. He knows as well as anyone that when you tell people not to look, they're going to look. So his last line tells me that he wants us to watch him doing whatever it is that he's doing. Is he in Mississippi or Missouri, the Show Me state? Either way, I'm predicting that his next post will show him to be in a state of denial.

I'm just hoping that the dickies link went to the pants company, and not his favorite porn site. And of course, the visual of his big old double beer belly...urgh.

DxAce do you have recommendations for a good site to check on what sw
stations are broadcasting ? THANKS.

The Sony AN-LP1 works much better than the wind-up antenna
that comes with the 7600GR. For limited space and portability
the AN-LP1 is perfect for the 7600GR. Just keep in mind that
it is designed for frequencies above 3.5MHz. It does little to nil
for any frequencies below 3.5 MHz. In which case the wind-up
antenna will be better suited from 1.7 - 3.5 MHz if that band is of
interest to you.

Go for it!

3090. HF Utility logs 1 Feb - 6 Feb 05

Newsgroup: rec.radio.shortwave
Date: 2005-02-06 03:59:05 UTC
From: Tom Sevart <n2uhc.spam@yahoo.com>
Message-ID: <36lj09F54tk5mU1@individual.net>
Source record: 7087

I'm posting these in "raw" format this time since there are so many and I don't have time to format them all.

HF Utility logs
1 Feb - 6 Feb 2005
All times UTC, all frequencies in KHZ

020105 0232 2686 USB Scrambled speech
020105 0253 2749 USB 'Halifax CG Radio' WX broadcast
020105 0301 5696 USB 'Commsta Kodiak' Wking unid a/c
020105 0322 5700 USB Speech-inversion scrambling
020105 0328 8828 USB 'Honolulu Radio' Passing aviation WX
020205 0039 4007 USB MARS net
020205 0040 4041 USB NNN0GBN4 MARS net, passing sample RTTY traffic
020205 0113 4125 USB Maritime stations, Don talking to Jeremy
020205 2255 11232 USB 'Trenton Military' Calling Hotel Foxtrot, no joy
020205 2258 11232 USB 'Chalice Foxtrot' Wking 'Trenton Military' for phone patch. QSY'ed to 13257 for phone patch. Chalice Foxtrot had lengthy phone patch to radar maintenance, ran several tests on radar to fix problem, no joy. Finally terminated phone patch at 0000.
020305 0039 5240 USB Speech-inversion scrambling
020305 0040 5371.5 USB AD7DU Hams on new HF frequency allocation in informal net
020305 0048 5446.5 USB AFN feeder
020305 0051 5537 USB Speech-inversion scrambling
020305 0052 5565 USB 'Speedbird 1246' Wking unid ATC w/ posn report
020305 0058 5649 USB 'Gander' ATC wking unid a/c
020305 0107 5732 USB 'Panther' Wking 51A, stns unable to hear each other, Panther advised to go back to scan. Later scrambled speech on freq
020305 0116 5732 USB 51A Wking 'Panther' w/ flight ops, Panther secured guard, req flight ops report every 15 mins
020305 0130 5732 USB J13 Radio check w/ 'Camslant'
020305 0132 5732 USB 51A Wking 'Panther' w/ posn rpt & req to secure guard.
020305 0148 5732 USB 51A Wking 'Panther' w/ flight ops & posn rpt
020305 0206 5732 USB 51A Wking 'Panther' w/ flight ops & posn rpt
020305 0434 3413 USB 'Shannon Volmet' Aviation WX
020305 0438 3428 USB HF ACARS signals
020305 0447 4149 USB Two subjs from fishing vessels chatting
020405 2327 5732 USB 17C Wking 'Panther,' asking them to check on vessel named Rebecca at 21 29' 48"N, 74 25' 05"W.
020405 2333 5732 USB 'Panther' Wking 17C asking if they had any further info on vessel Rebecca they inquired about earlier
020505 0446 5732 USB 'Camslant' Wking F04, securing radio guard at min 43
020505 1601 7527 USB CG1504 Wking Camslant Chesapeake after linking in ALE,

reporting flight ops normal & passing posn rpt
020505 1603 7527 USB CG1500 Wking Camslant Chesapeake after linking in ALE, advising airborne from New Orleans. Camslant secured guard at min 00.
020505 1606 13375//11545//12603 USB Lincolnshire Poacher YL/EE 5F number msg
020505 1642 7527 USB 'Camslant Chesapeake' Wking CG202 for flight ops, 202 reported on deck in Clearwater, will report when airborne.
020505 1651 7527 USB CG1504 Wking 'Camslant Chesapeake' after ALE link, advised on final approach to home base, request Camslant secure guard.
020605 0143 2749 USB 'Halifax CG Radio' Canadian CG maritime WX forecasts & notices to shipping. Repeated in FF.
020605 0230 3347 USB AAR7FX MARS net, talking about poor propagation condx, asking for check-ins for informal net
020605 0245 3349 USB NNN0LHR Informal MARS net
020605 0248 3455 USB 'New York' ATC wking 'Skybird 323' w/ posn rpt & selcall check
020605 0317 5532.7 USB Fishing boat comms, XXX language, no callsigns used
020605 0321 5403.5 USB Hams chatting on new ham frequency allocation
020605 0325 5446.5 USB AFN feed w/ car care program
020605 0333 5649 USB 'Gander' Wking Air France 321 w/ selcall check
020605 0336 5778 USB OTH radar w/ CW "O" signal
020605 0345 6501 USB NMN Automated voice w/ WX
020605 0347 6673 USB 'San Francisco' Wking 'Aloha 492' w/ posn rpt
020605 0358 7443 USB OTH radar w/ CW "O"

Well, for google anyway it's under the advanced search options. Go to
www.google.com, and to the right of the search box you'll see what you're
looking for.

[...]

Even if the beam is to Canada, and the ads are intended to appeal to Canadians at least in part, then no law is being broken.

Now I don't want to listen to lunatic religious rants (except for a laugh, maybe during a party after everyone's tired of dancing) any more than you do -- but still it must be admitted that the law itself is absurd.

There's no rational reason why domestic shortwave broadcasting shouldn't be allowed. In fact, it should be encouraged.

Low-power stations operating during the daytime in the 6 and 9 MHz bands would have wide North American coverage (N.B. the almost micropower Canadian stations on 49 meters) and cause little or no interference overseas. These stations could be low-expense operations, too (because they would be low-power and with simple high-angle antennas), which would mean that they wouldn't have to sell their souls to mammon (or gold- or quack cure-hawkers). They could be operated by ordinary folks for a very small investment.

The real reason for the original law (they gave a few spurious reasons, of course) was a desire on the part of large media corporations to protect their big investments in mediumwave networks from competition from lower-expense shortwave upstarts, who could easily have covered the nation with a couple of 50,000-Watt transmitters. Can't have that!

It's the same sort of protect-our-millions mentality that has set terrestrial digital broadcasting back by quite a few years (and maybe killed it), and saddled us with the kludged and dirty IBOC turkey. Can't have scalable almost-unlimited channels! Can't have the 250-Watt daytimer or student station upgrade overnight to an equal signal with WABC! That would be terrible, wouldn't it?

With all good wishes,

Kevin.

3097. Re: Trade Yaesu transceiver for receiver

Newsgroup: rec.radio.shortwave
Date: 2005-02-06 05:38:59 UTC
From: Soliloquy <Notvalid@notvalid.com>
Message-ID: <Xns95F569E37E1FSoliloquyTriesHarder@216.168.3.44>
Source record: 7094

"John" <ac5tx@sbcglobal.net> wrote in news:yWPMd.23137$wi2.2183
@newssvr11.news.prodigy.com:

This thread is confusing for me.

The only posters that I see are as follows:

1. John, the individual that made the offer.
2. Soliloquy, the individual asking for more info on the Yaesu 857.
3. Ron.

John makes the original post, expressing an intent to trade.

I ask for more information about the Yaesu 857 and what is desired
concerning a "very good receiver"

Ron posts nothing, other than a response with the quoted text from John's
original post, and nothing more. Being that Ron posts with his e-mail
address evident, without the usual "remove so and so before replying",
perhaps Ron is simply offering his e-mail address to John so that John
may contact him. But Ron also has another e-mail address at Yahoo. Ron
has sold some tires in 2003, off an SUV, something about clearance into
the garage. Ron is a busy person, and is also selling a Yaesu FRG-100 for
$300 (Feb 5th 2005 post). You would not wish to meet Ron in a dark alley,
as Ron is a big guy at 6ft 3in at about 285 Pounds.

On the other hand, John has offered the following:
FS new used in box Kenwood MC-57DM MIC

John was looking to purchase the following: Dec 8 2004, 2:31 pm Anyone
out there have an 857 they want to sell at a decent price? Thanks

Also: Please look at my very clean Kenwood 520S, no reserve. Dec 13 2004

The only other thing of not that I can find is that it is evident that
John's keyboard has a key that sticks, as he is rather fond of saying:
QUAAAAAAAAAAAAAAAAAAAAAAAAK

He should get that fixed ;-)

No Such Thing, ahem, as privacy, or damn little of it.
http://www.imdb.com/title/tt0248190/

The Uniden-2021/Radio Shack DX-400 was the only triple conversion
portable receiver ever made, AFAIK.

The 4245 would be a real gem with the Sherwood SE-3 sync' detector added
to it.

The original post was.

==========
From: "Hatfield" <utility_infielder@earthlink.net>
Newsgroups: rec.radio.shortwave
Subject: "SONY LONG RANGE AM/FM TRANSISTOR POCKET RADIO"
Date: 3 Feb 2005 19:07:34 -0800

There's a guy in Atherton (NorCal) on Ebay who has several auctions for
these cheap little Sonys. Its the SONY ICF-S10MK2, AM/FM. I bought one
and darned if it wasn't easily the most sensitve pocket sized AM radio
of a dozen or so models I've tried. Now the Giants baseball station
comes in loud and clear anywhere around town, amazing.

The FM band was crap, distortion, no stereo, but AM performance highly
exceptional, as the auction shows it's kinda large, but it fits a shirt
pocket OK.

Propagation has been terrible to erratic on many occasions but there
have also been many days with very good propagation, so I wouldn't
necessarily right off the past six months.

It depends on what bands you use. At solar minimum the lower shortwave
bands can be very good while propagation on the higher ones tends to be
poor to nonexistant. The downside of this effect is band crowding. The
broadcasters have less spectrum to use and must therefore use more of
the lower bands.

I think we've reached the point where a good sync' detector is not
exactly rocket science anymore. However the problem is designing one
that doesn't infringe on someone elses design. That could be a big
problem.

Navy survival kits used to (maybe still do) include a handcrank radio, plus a key, so shipwrecked sailors could send out SOS messages. I wouldn't be surprised in B17 crews had similar things.

Well, I can't say I haven't been thinking of joining it myself, but as the Ace has started sending me flowers, chocolates and frilly underwear, I feel a certain sense of obligation and commitment. I'm sure it's not just a rebound fling after I got dumped by beerbrain.

The Ace has promised me he will be going public with our relationship in a few days. He says he's relieved to have shed the cloak of deception and is happy to be finally out of the closet.

See? That's the beauty of giving YOURSELF a nickname. You get the jump on everyone else! Mind you, if I were him, I'd have picked something a bit less demeaning. Then again, in his case, it probably *IS* a lot less demeaning than the other options.

Yeah, I'm single and that's one of the many reasons why. Marriage is for suckers IMHO. It used to mean somethng many, many years ago but womens mind set have changed to much it isn't worth it now. I've seen FAR too many marriages go down the toilet for my money.

I found out what was going on here.
There are quite a few variables that happen when tuning the radio.

1] Tuning rate changes with speed of dial rotation

2] Tuning rate changes yet again for some other modes

3] Lock can get lost or shift when changing even in other AS modes.

So at first it looked to me like something was wrong. After using it for a
while you see the pattern. All in all I think it's a nifty little radio.
A real novelty item for sure too.

BTW

I remember I asked how much an original Lowe keypad for this radio went for.
Well take a look. Almost $71. I really feel I got a good deal on mine for
$500 since it included the keypad, USA power supply and batteries/orig

manual. The last 150 sold for $465 with no US power supply and no keypad.

What's that other site where you can find out a stations ID just by entering
the frequency??

A guy walks into a bar, sits down. Tells the batrender "A round of
drinks on me!"

After getting hs drink, the fellow next to him asks "What's the
occasion Pal?"

"I'm getting married tomorrow! Now I'll be able to get laid any time I
want!!"

The other fellow says "Funny, but that was the reason I got divorced!"

thanks everyone who responded. the phrase "nebulous improvement" that Joe used to describe the benefit the modifications would have seems entirely accurate. Another correspondent in a private message described the noticeable benefit accruing only to those with "golden ears." Often we fail to recognize the simplest solutions, which is what I did here. An external speaker did not occur to me until I read the replies. This is an easy and inexpensive improvement that will offer quite tangible results. This is certainly something I will do. I am also exploring the AM filter issue and will likely replace it. Thanks for all the help and sharing of experiences. As one of the posters said "if it ain't broke, don't fix it." applies here too.

As Cinch turns the crank, there is a 'slider' moving inside of coil
(probably a primitive crystal set for receive only). You would expect that
being in a concentration camp, their radio would be make-shift at best.

Are you talking about Thurtell????

I think he's on ebay now selling 16-pill amps and echo boxes.

Seriously.....think about it. Before ebay, he was almost a "sole source" for clean, collectable boatanchors. eBay most likely did him in.....ebay empowered the average joe to present his own equipment to the world rather than succumbing to selling to a "reseller" that had all the appropriate connections unavailable to the the average person.

Steve Quayle, doomsayer extraordinaire. Sooner or later, one of his "prophesies" will come true. Not bad, 1 out of 10000 (maybe). I was especially amused when he began predicting global problems with earthquakes, problem is that he waited until after the Tsunami. Go figure. He still advocates buying gold, (he just happens to sell it) despite the general cadence of the show indicating that the world is coming to an end shortly.

I can actually listen to some of his shows. He periodically has an earthquake expert on the show. The guy seems somewhat reasonable. I was impressed when the expert had been on the show, and the question had arisen about the water in some listeners toilet that the listener claimed was spiraling in the wrong direction after the Tsunami had affected the earth. The expert correctly stated that toilets are not affected by the Coriolis force, rather the water rotation is a factor of design.

http://www.usatoday.com/weather/resources/basics/coriolis-understanding.htm

On the issue of toilets, have you ever seen the American Standard Toilet where they flush an abundance of golf balls (they don't offer the golf ball video that he saw, but they do flush other items), and other non-fecal matter to demonstrate its effectiveness?

http://www.americanstandard-us.com/plandesign/performance/BestFlush/best_flush.asp

Apparently his daughter is famous for clogging the toilet by the usual product that one expects to discharge into the toilet, fecal products and toilet paper.

Anyway, he came across the toilet series listed above and viola, no more problems. He says that it completely flushes in about 3 seconds.

Now don't give me any shit about this being an "awful topic post".

Soliloquy

The person who spent $71 on the keypad got a lousy deal if you ask
me--unless of course the point was simply to have have it as a
'collectable'. For $79.95 he could have purchased a remote control for
the 150 that has way more functionality than the original keypad:

http://www.swl-remotes.com/pages/22/index.htm

I bought one of these things for my Drake a while back and have been
loving it. I'm one of the few people around I guess who doesn't like
having their receiver hooked directly to a computer. At the same time,
I don't like having to sit right in front of my receiver all the time
in order to tune around. The remote is very liberating.

Steve

3134. Jean Shepherd marathon / Pacifica begathon webcast

wbai.org streams on the net.

Also hear old Shep shows at Max Schmid's web site.

http://www.flicklives.com/Mass_Back/mass_back.htm

I see there is a link to order Bergman's book on that page.

(now financial relationship to Shep, Max. or Bergam.)

Thanks, I'll be extra careful..
I uploaded several more pix to abpr showing the mfg date, label, filters, filter subassembly and view of the chassis from below. The bottom cover plate has 27!! screws. Any other info appreciated.

I can get it clearly, too- but I am hearing Morse letters H H G
repeated over and over - or is that something else? (I admit to almost
zero knowledge of beacons). It is clearer on 419 here.

Most of them Mil (Military) Radios are different.I know an old guy who goes around and buys things to resell to help keep the wolf away from the door,so to speak.A few years ago,he had a Russian Ship Radio and a England Radio for sale.He was asking $50.00 for the Roosky Radio and $30.00 for the Limeyland Radio.Why I passed on both of them Radios,I have no idea.I think I am fixin to phone that auld fart over there at Southwood Apartments on Elton Road and see if he (Charles McKeithen) has something I need to buy from him.

First, they weren't in a concentration camp. Those were for people who
the nazis didn't like. They were in a prisoner of war camp, which at least
had the benefit of being run under the rules of the Geneva convention.

Since it was an exaggeration of the situation, there is no limit on what
would be in the radio. It's been years since I saw the show, but I remember
no indication that they were working with primitive equipment.

In reality, POW camps were not restricted to crystal radios. I gather that
even before the war began, the British started preparing officers for
capture, and the Red Cross packages were designed to help them
escape. Luxury items were chosen to bribe the guards, that scene in The Great
Escape has truth to it, and items were sent in the package that could be
remade into other things. Plus, useful items for radios were outright
smuggled into the camps in the packages.

Yes, most had nothing more than a crystal radio. But some camps had full
blown receivers. And one POW camp had a complete transmitter, which was
never used but ready in case it.

Given that the camp in Hogan's Heroes was practically a spy ring, I would
expect that arrangement would have been made to bring them a proper radio
and other supplies.

People of all stripes will step over and on a horde of homeless people to duke it out about issues dear to their hearts, mostly wanting to beat their opinion into others. There's no corner on intemperance and intolerance. As if complicated questions have only one answer.

>200-grand slam, hehehe! There's also an important lesson
>in this story, Voyeurwebbers: ***If you're hobby becomes
>your life ... it's definitely time to get a new hobby***. -- Igor

My wife never had to work for my hobby. Before we married we
discussed it. I had been a ham for years before we met. I told her
that I was an Amateur Radio Operator for years before we met and I
would be one long after she's gone. If she couldn't accept that, she
would have to move on. Likewise, I never tried to discourage or
change things about my wife. Those things a person likes and
dislikes, or their hobbies, etc, are part of what makes them the

persons they are. I believe that if we take those things from a person, there will be a hole in their life and they will no longer be the person we met and fell in love with. Of course, it is different if that person changes hobbies, etc. on their own, but it is not good to take it from them.

To include in their budget, support for each other's hobbies is not a bad thing, but to break their budget over any one hobby is not a good thing. My wife never went hungry because I bought a radio.

To answer my own question, the diodes are 1N914 or 1N4148. I emailed the author of the article and he was kind enough to write back and give me a detailed explanation. I believe he's using a 2K pot. I'll probably put a 10k pot in series with a 1k resistor and take it from there. I appreciate your advice. Now I have a pretty clear picture on how my "Gizmoe Box" will work.

GO PATRIOTS!

Yes, as I recall his mother only charged me $20 or so. That was back in the days when she was servicing the fleet.

Boy is Bush good. In his second invasion he is in the business of helping
create a whole new crop of terrorists that'll keep his kind in business for
many years. And the oil flowing. He brought freeDumb to everyone, 'course
it took 40K dead civilians to do it, but that's just the price you gotta
pay. Gas up that SUV! And don't forget to execute a few mentally retarded
criminals and children back home. And tell 'em all God is on your side.
As if.

Source record: 7030

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

I'm not sure, but I'm guessing it'd have to come from beerbarrel. Sort of
like mating calls, they have to come from the same species. Most likely Homo
erectus in this case.

TITLE: "Jesus Jr. - The Country Western Christ"
ARTIST: The Cab City Combo

(What can be said about a bunch of old puds that
continue to mock classic rock and roll and anything
else that occurs to them? Are they WHAT AMERICA
NEEDS NOW? Are they THE NEXT BIG THING?
Or are they fooling themselves and just wasting everybody's
time. You decide!)

Free MP3 download of this song IS HERE!
--> http://music.download.com/cabcitycombo/3600-9022_32-100151557.html

Lyrics

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ

Well he was born in Tennessee
Not somewhere out in Galilee
His dad got his at Calvary
And his mom works at the grocery

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! His grandma Mary's joy
Father, Son and the Holy good old boy

Well Junior takes his name in vain
When folks abuse the passing lane
And at his favorite bar on Main
The only thing he'll raise is cain

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! At least he's not a jew
10-4 Satan, his rig is passin you

Now if his wheels get stuck in mud
He'll part that shoulder like the flood
And when he drives on Easter, bud
His left-hand signal's dripping blood...

Jesus Jr! His grandpa is the Lord
Jesus Jr! got mudguards on his big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ
Jesus Jr! The Country Western Christ

3195. Re: Using BOTH an attenuator and static discharge resistor

Newsgroup: rec.radio.shortwave
Date: 2005-02-06 20:53:06 UTC
From: CW <cmagers@earthlink.net>
Message-ID: <EpKdnZbSWpWfHpvfRVn-rA@comcast.com>
Source record: 7041

If you look on my web page, you see the same diode protection circuit below the neon bulb one. Same diode recommendations. The attenuator in the wd8das circuit is the same also. They are just shown, in this case, separately. The pot he (wd8was) has on his schematic is specified as 1 to 10K. Anything in this range will work. The higher value will give you finer control. The 10K pot in series with a 1K resistor will not work well. It will just limit your attenuation range one way or the other, depending on what side you put it on. If you were to put them in parallel, you would simply be reducing a 10K pot to a 909 ohm pot. The neon bulb circuit does have advantages. The bleeder resistor constantly bleeds static keeping at a low level as opposed to the diodes that have to reach a certain level before they conduct. The neon bulb fires more often than you might imagine. Build it with the bulb exposed and watch. You could, of course, do a variation. Build the wd8was circuit and put a bleeder resistor before it. None of this stuff is new. You can see that there are variations. You are not stuck with one design. Whatever you do though, make sure it is of sound design.

No, it's probably right. Just remember, figure's don't lie -- but liars
will figure.

Think about it -- There are plenty of ways to quantify "fastest growing."
For instance, when they went from 10 stations to 11, that was a 10%
increase. So now, when they go from 40 to 41 that's still a 2 1/2%
increase.

Meanwhile, if Rush goes from his current 600 stations to 601, that's only
.16 of a percent of increase. OH MY GOD!

Aren't statistics fun!

The funniest thing about this is that "Air America" could be broadcast 24/7
on 1000 antennas and it still wouldn't have the ratings of Limbaugh's show.
It's all about ratings, and Air America's are dismal.

-- Stinger

How do you expect to be taken seriously on the group with a reply like that? Did it ever occur to you that many here won't bother to help you or answer one of your questions because of rants like that? Just wondering if you ever consider the consequences. I know, you don't care.

Hand cranked generators were common during WWII for powering portable transmitters/receivers. They were similar to an aircraft magneto generator.

Stooopid. I am looking for an Amish family to adopt me. America is being flushed down the shit tubes, elections are rigged, jobs flow overseas faster than the water from Lake Erie over the Niagara Falls, moronic "reality" shows dominate the television, and we continue with the asinine skits such as this one. I would have thought that it was funny at one time, but endless laughter is indicative of a deranged mind.

We, as Americans, continue laughing, even though 1400 dead American soldiers in Iraq have stopped laughing, Tens of thousands of Iraqis have stopped laughing, 150,000+ Tsunami victims have stopped laughing, but we go on and on laughing like some kind of idiotic stuck record. We are laughing ourselves into oblivion, under the influence of some amorphous and undefined societal nitrous oxide. As Americans, we worry about the important things, like whether Ford or GM trucks are better, or who will win the Super Bowl, or whether the officiating during a particular game was fair. We take pride in the deprived products and creations that ensue from American minds, the latest in modified Sawzall sex toys, or the newest show that is supposed to outdo the vulgarity of South Park.

I realized the other day that we, as have the Native Americans, have been bought out by golden trinkets. We have gleefully given up our dignity and rights in exchange for easily obtainable internet porn, cheap DVD players, SUVs, TVs, etc. But the Amish, in shedding any significant contact with the Government, have seemed to at least held their own. Simple lives, perhaps, but why not? They have kept their allegiance with God, Family, Friends. Sure, they seem backward to us, shunning those of their own kind that deviate too far from the "norm". Believe it or not, some of the sects are more liberal than others, so the norm does vary from area to area, but overall I think that they have done a better job holding their society together than we.

Actually the water rushing over Niagara Falls is from the Niagara
River, fed by Lake Ontario, and flowing into Lake Erie.
